should see your filename in the ATTACHMENT BOX and it will be
shaded.

NOW POST AWAY!!

IF YOU ARE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button,
highlight this entire article, then press the CTRL key and C key at the
same time to copy this article. Then print the article for your records
to have the names of those you will be sending $1.00 to.

NEXT, Go to the newsgroups and press POST AN ARTICLE type in your
flashy subject and click the large window below. Press CTRL and V and
the article will appear in the message window. ** BE SURE TO MAKE YOUR
ADDRESS CHANGES TO THE 5 NAMES. ** Now re-highlight the article and
re-copy it re-copy it so you have the changes.... Then all you have to
do for each newsgroup is CTRL and V and press POST. It's that easy!!

THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

** REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200 **

This is WHY this works!

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies that just made me $3,125.00!!! With an original investment of only $5.00!

AMAZING! And, as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So let's put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. Then start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles every day, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so - People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and knew honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone are playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to

Makes the money!!

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. ** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again
:

Sure, a keyed audio signal into a SSB rig should be indistinguishable
from ordinary CW. We do FSK that way by putting an AFSK signal
into the microphone jack. We couldn't call the emission MCW then,
though. It would just be ordinary CW generated a different way.

But if you did that with an AM or FM transmitter, not only would you
use a lot of bandwidth (not serious in itself) but the continous carrier
would be using excessive transponder downlink power. That's the
real issue.

>The problem comes with what is probably being suggested ['haven't

>causing serious interference?

Your suggestion of *keying* an FM transmitter is a quick, easy, and
cheap way to get going. Any old UHF FM transmitter will do for mode
B birds, or a VHF-Hi version will do for mode A. I like the GE Exec II,
but a Motorola or even an old ham rig will work. Don't use PTT for keying.
That's usually ugly and slow. Key a low level stage after the oscillator.

This works dandy, and is easy to do. Surplus commercial FM rigs
can be bought for $50 or less and run 80 to 110 watts. Makes a nice
signal on the bird. (Disable the modulator.)

You can convert an Exec II to VXO control by simply inserting a 0 to 10 volt
tuning voltage via a pot into the temperature compensation pin of the channel
element. this can give you about +/- 20 kHz tuning on 70 cm, somewhat less
on 2m. This also works on receive for doppler tracking if you're using the radio
as a FM rig for a digital microsat. These commerical rigs are pretty easy to
get to work properly at 9600 baud too.

The cheapest route to SSB that I know is to use an old SSB CB with a
transverter. Almost all of them can be easily modified to allow the clarifier
to swing transmit as well as receive, so you won't have holes between
the channels where you can't work. You can convert the CB to 10m if
you like, but it's usually easier to just change the crystal in the transverter
so it'll expect a 27 MHz IF. Fleamarket SSB CBs go for between $20 and
$50. A good transverter is going to cost $150 or so at a hamfest. So you're
looking at about $200 if you go that route. You might find a used IC-211 for
that much, so that's another alternative.

There's also Rick Campbell's T2. That's a very simple SSB phasing exciter
(kit available from Kanga). It can be built to work on 2m or 70 cm (actually
anywhere between 500 kHz and 500 MHz). Output is only 10 mW though,
so you'll need some serious amplifiers behind it. You can get to 3 watts with
a Mitsubishi brick (RF Parts) and follow that with an amplifer designed to be
driven by a HT (Mirage, etc). That'll probably drive the cost above the options
listed above. There's a companion R2 receiver you might want to check out,
though. It works pretty good, but you'll want a preamp in front of it. You have
to supply the LO for either of these rigs. That can be just a VXO, or if you
want to get fancy, a DDS such as the one featured recently in QST.

Antennas can be cheap too. A length of wooden 2x2 and some aluminum
clothesline wire for elements will give you a dandy CP yagi for under $10.

There's lots of ways to put a signal to the birds. You don't have to spend
thousands to get setup to do it.

>I am trying to figure out what the bands are going to be
>for the Amsat P3D bird. I see a list of transmit and
>receive frequencies but I am unsure what the combinations
>will be. Could some kind soul please enlighten me?

The matrix can be configured on the fly. Any uplink can be
cross connected to any downlink. And more than one pair
can be active at a given time. It seems certain that mode
U/V will be heavily used at first, but other modes will likely
gain more usage as time goes on. Mode L/S is likely to see
a large usage because it should require very modest antennas
and has lots of available bandwidth. That means apartment
dwellers and portable users can play.

>Also, with the power levels of P3D could a dish work well
>on 430 Mhz. ?

Dishes always work well, provided they are big enough.
You're going to need about 100 watts ERP on 70 cm.
Run the numbers for your transmit power and your
dish gain and see how they fall out.

This is the Russian air to ground frequency. They've used it since the
beginning of their manned program. They use ships at sea as relays
since they don't have anything equivalent to our TDRSS system for
relaying signals when their craft are over the horizon from their
territory.

Nope, the amateur equipment was not in Spectr. It is in the core module.
The power shortfall caused by the accident will limit amateur activities
on MIR though.

Gary,

Mir does not use ships to relay communications anymore, they haven't since about 1990 I think. They do have a TDRS type satellite constellation in orbit called Altair, but currently the transmitter on board Mir is not working. They hope to put a new transmitter in when the next Progress supply ship reaches Mir on July 7th.

Also, currently NASA's Wallops, Dryden, and White Sands facilities are also providing VHF voice relay from Mir to Moscow.

Welcome,

Chair-Pak is a great idea!!!

It's a Backpack AND a built-in Chair!!!

See it at http://www.chairpak.com

3 Sizes Full Pak, Day Pak, and a Child Pak!

How many times have you gone somewhere and needed a chair ?
beach waiting in line with friends
hiking around the campfire conventions
air shows at the park in line at the DMV
outdoor concerts hiking trails car shows
camping on campus reading at the poo l /beach
fishing trekking rest areas
poetry readings jams outdoor games
outdoor sport events story telling to children picnics
theme parks national parks hunting
backyard outdoor weddings and anywhere you want to SIT!!!

Carry your stuff and your chair where ever you go!!!

Where do you want to sit today?

Chair-Pak is made of the strong durable Dupont Cordura and the frame is of strong and light T6 aluminum.

If you would like to order, or get more information about Chair-Pak, please visit our web site

http://www.chairpak.com

BID: $ANS-180.01

On Wednesday June 25 at 9:18 UTC a Russian Progress cargo ship collided with the Spektr module of the MIR space station causing substantial damage to the module. All personnel on board, including US astronaut Mike Foale, KB5UAC, and two cosmonauts were unhurt in the incident.

The Progress cargo ship, filled with garbage and undocked the day before, was performing a manual docking test with the Kvant module, when it veered out of control and struck the solar array and thermal control assembly on the Spektr module. During the collision, the aluminum hull of the Spektr module was punctured, resulting in an air leak. In a manner similar to damaged ships at sea, the Spektr module was quickly sealed off from the rest of MIR to maintain a livable atmosphere for the astronaut and cosmonauts. The Spektr module is now close to a space vacuum environment. It is unclear where the leak occurred or the size or shape of the gash in the module.

Nearly all astronaut Mike Foale's personal effects as well as his sleeping quarters were located in Spektr. As a result, he has moved into a new sleeping area and additional personal effects will be included on the next resupply ship. Many of the US experiments were also housed in the Spektr and are now lost. However, two major US experiments were located in the Piroda module and are in fine shape.

The Solar Array damage initially resulted in a 50% reduction in electrical power. Over the past few days, the crew has worked the power issue and have now regained about 70% of the pre-collision power capability. Flight controllers are developing procedures to recover full use of the solar arrays on Spektr. The options include a possible procedure to hook cables from the Spektr to the MIR's base block to route power from the disabled module to operational batteries. The two Russian cosmonauts, Commander Vasily Tsibliev, and Flight Engineer Alexander Lazutkin would perform a space walk to accomplish this. It is expected that this space walk, or

EVA, would not occur earlier than mid-July, following the arrival of hardware and new cables on the next Progress ship. The launch of the next Progress resupply ship is planned for early July.

Despite the recent problem on MIR, the crew is in good spirits. They will be working hard in the weeks ahead to bring MIR back to it's pre-accident state. Despite the problem, Mike Foale has been active on amateur radio during the past few days. The radio has served as a valuable link between Mike and his family and friends during this crisis.

[ANS thanks Frank H. Bauer, KA3HDO, AMSAT-NA, VP,
Manned Space Programs for this information.]

SB SAT @ AMSAT $ANS-180.02
HAM RADIO DURING MIR CRISIS

HR AMSAT NEWS SERVICE BULLETIN 180.02 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 29, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-180.02

For US ham-astronaut Mike Foale, KB5UAC, aboard the crippled MIR space station, ham radio is providing a valuable supplement to conventional Russian and NASA communication systems. Foale has already used the ham gear aboard MIR to talk to NASA managers and fellow astronauts and exchange health and welfare news as the crew struggles to stabilize the ship after Wednesday's collision with an unmanned cargo rocket.

Astronaut friends of Foale's gathered late Wednesday morning--just hours after the mishap--at W5RRR at Johnson Space Center in Houston for the scheduled MIR pass and QSO. "When we got there, it was a packed room. Ninety percent of the room was licensed astronauts," said Matt Bordelon, KC5BTL, the SAREX principal investigator.

As Bordelon related: "A hush fell over the room as MIR started its trek above the horizon. We didn't know if they would be on--power was down to 50% available and all nonessential equipment was turned off. Before we even had a chance to call up, Mike called down for us!"

Following a collective sigh of relief, Bordelon said astronaut Dave Leestma, N5WQC, took the mike and started talking. "Mike was in Good spirits. "Several others in the room also chatted with Foale during the 10-minute contact.

Foale asked for some personal items to be sent up when the next Progress supply ship flies. And he had good news. Two of his major experiments are okay. They are in the Priroda module where he and the cosmonauts are living until repairs can be made to the damaged Spektr compartment. At that time the MIR station should be able to resume normal ham radio contacts. "Amateur Radio has a very low priority when survival is the key, and power is critical on MIR," Neal said in assessing the

situation. A supply ship is being readied and could carry a replacement solar panel and other supplies to MIR within two or three weeks. NASA Shuttle-MIR Project Manager Frank Culbertson said repairs likely would require a space walk or two by the MIR crew.

"It was a very successful pass," Bordelon said of Wednesday's contact with Foale. "All were very thankful for the ham radio and the excellent link it provided." Bordelon said he does not expect Foale to have the ham radio on at all times during the current crisis, "but I think he'll do more passes with us," he added.

Bordelon said that astronaut Ken Bowersox was so impressed, "he wants to get his license next week." As SAREX Working Group Chairman Roy Neal, K6DUE, put it: "It's proving that ham radio, as always, is an invaluable aid to health and welfare during critical times." As repairs progress, Neal said, "it's safe to say that disaster has been avoided. Repairs probably can and will be made, and ham radio will continue providing a personal link to help Mike Foale stay in touch with his home base."

Ham-astronaut and former MIR crew member Jerry Linenger, KC5HBR, told reporters Wednesday that the MIR crew had to power down everything everything possible, including some life-support systems, in the wake of the collision. The crash initially resulted in a loss of as much as 50% of the MIR's electrical power. By Thursday, the MIR had 70% of its power back. The cargo spacecraft sheared off half of a Spektr solar panel and damaged the module itself. When the crew sealed off the compartment, they had to cut cables from three other panels.

Speaking at a NASA press briefing, Linenger characterized the MIR as "a darkened ship" and said the crew would operate "in a slowdown mode" until the effects of the mishap could be corrected. The accident cut off Foale from his sleeping quarters and personal items in the Spektr module, which also contains most of the US experiments aboard MIR. Foale has been aboard MIR since mid-May, when he replaced Linenger.

Linenger told the press conference Wednesday that it was "too early to comment" on what the latest problem aboard MIR might mean for the future of the 11-year-old space station, which already has outlasted its anticipated life span by six years. Linenger said fire and decompression are the two most dangerous things aboard a spacecraft "and we've had both of those." During Linenger's four months aboard MIR early this year, the crew experienced a fire, a near collision with another cargo rocket, and coolant system leaks.

SB SAT @ AMSAT $ANS-180.03
OSCAR-11 REPORT 24 June 1997

HR AMSAT NEWS SERVICE BULLETIN 180.03 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 29, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-180.03

During the period 15-May to 24-June good signals have once again been received from the 145.826 MHz. beacon.

Telemetry nominal. The battery voltage generally around 13.9 volts, but 14.4 has been recorded on one occasion, and several over 14.0 have been noted. The internal temperatures have continued to fall, due to solar eclipses. The battery temperature is now 0.2 degrees C, i.e. about 22 degrees below the full sunlight condition.

Three WOD surveys have been transmitted during the period. Channels 0, 10 20, 30 (-Y, +Y, -X, +X, solar array currents) dated 01-May continued. This was followed by channels 17, 18, 19, 20 (+X, +Y, +Z facit temperatures, & -X array current) dated 25 May. Currently channels 10, 20, 30, 40 (+Y, -X, +X array currents, array voltage) dated 07-June is being transmitted.

Three AMSAT bulletins by Richard G3RWL have been uploaded. Topics have included the AMSAT-UK colloquium, OSCAR-11 status, LUSAT and FO-20 information. Bulletins always include current Keplerian elements for OSCAR-11, and often for satellites featured in the bulletin.

The operating schedule is unchanged.

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

The mode-S beacon is ON, but telemetry indicates that it has partially failed, and delivering half power. It has been heard, but it is a weak signal, and a good receiving setup is needed. Any reports of reception on 2401 MHz. would be most welcome. Please e-mail g3cwv@amsat.org.

The 435.035 MHz. beacon is normally OFF. However it can sometimes be heard when the satellite is being commanded by ground control, i.e. within range of Guildford, UK. Likely times are between 13:00 and 18:00 UTC, Fridays or at weekends. However it has been heard at other times, and recently was heard unexpectedly during an early morning pass on Wednesday 21 May at 05:30 UTC. When the 435 beacon is transmitting, the 145 beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit my web site. It contains some
software for capturing data, and decoding ASCII telemetry and WOD.
There is an archive of raw data (mainly WOD) for analysis, which is
continually being expanded, as new data is captured.

COSMONAUT GETS U.S. LICENSE

HR AMSAT NEWS SERVICE BULLETIN 180.04 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 29, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-180.04

AMSAT-NA would like to welcome cosmonaut Vladimir Titov, KD5AOS to the ranks
of U.S. hams. Bruce Paige, KK5DO , reports that Vladimir took his test at
the Clear Lake amateur radio club test session the second Saturday of may.
Vladimir is scheduled to go on the shuttle mission in September that docks
with the MIR. KD5AOS told Bruce Paige he was taking his ham test because he
would not be able to use the Russian callsign from the shuttle. This way,
Vladimir can use either callsign depending on which heavenly body he is
aboard.

Vladimir Titov, KD5AOS, has also spent a lot of time on the MIR in the past
having been one of it's residents. Bruce Paige, KK5DO was one of the VE's
that signed his CSCE and 610 and had a chance to talk with Vladimir for a
few minutes at the session.

[ANS thanks Bruce Paige, KK5DO, AMSAT Area Coordinator, for this story.]

WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 180.05 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 29, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-180.05

MIR:
Mike Foale, KB5UAC, has been active on amateur radio during the past few
days. The radio has served as a valuable link between Mike and his family
and friends during this crisis . Also activity from the MIR packet station
has been reported. Frequencies with activity have been 145.985 MHz and
the 145.200/800 MHz split.
.

SAFEX, MIR 70 cm Repeater
(Uplink 435.750 MHz FM, Downlink 437.950 MHz FM,

Subaudible tone 141.3 Hz)
Not operational at this time..

RS-10
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)
RS-10 Still silent.
RS3A needs some SWL reports of RS-10.
What time you heard RS-10, and also the date.
Send info via packet to Andy, .RS3A.
Packet: RK3KPK@RA3KP.MSK.RUS.EU

RS-12
(Uplink 21.21-21.25 MHz CW/SSB, Downlink 29.41-29.45 MHz or
145.91-145.95 MHz CW/SSB)
Signals on RS-12 in North America during May and June (almost
exclusively daylight passes) are weakened by increased ionospheric
activity which is keeping 15m active during the daylight hours.
This makes it especially important for the 'old timers' to warn the
newcomers on RS-12 to set their uplink frequency and leave it alone to
prevent sweeping across the 15m band and QRM'ing the terrestrial QSOs
in progress
[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
WT0N reports that downlink signals are still weak from RS-15,
but the bird is still workable.
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
RS-16's 435.504 MHz beacon is active. Also,
the 29.408 MHz beacon is reported as being heard.
No transponder activity yet.
70cm beacon =RS16 ZEAA ZEJA ZEAA(AA is sent as one
characrer);P163,o0,n0,m0,l0,k7,j5,i7,h49,g0,f159,e8,d6,c8,b11,a7.

Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 , 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W
[ANS thanks Bernie Hall, WY4D, for this report..]

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9
MHz CW/USB)
Operating normally. Strong downlink signal. Very busy

during passes over North America. Please remember to adjust the
higher frequency for doppler when the bird is in analog, JA, mode.
This means adjust the 70 cm frequency, the downlink, for doppler
shift. You do not have to adjust the 2 meter frequency, the uplink,
for doppler.

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK.)
KO-23 operating normally.

KO-25
(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM,
9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27
(Uplink 145.85 MHz FM, Downlink:
436.792 MHz FM (As of April 1, 1997)
Operating normally.
AO-27 (1-Jun-1997- 10:58 UTC Orbit-19182)
The satellite is working normally over North America.
and Europe.
Current AO-27 schedule information can be found at
www.umbra.com

Tepr 4 = 32 counts 16 Minutes
Tepr 5 = 66 counts 18 Minutes
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update.]

FO-29
Voice/CW
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600 baud
BPSK)
Please remember to adjust the higher frequency for doppler when the bird
is in analog, JA, mode. This means adjust the 70 cm frequency, the
downlink, for doppler shift. You do not have to adjust the 2 meter
frequency, the uplink, for doppler.

The latest FO-29 Schedule can be found at.

NOTE: Add 6.83 minutes to the clock of the satellite.
Graphic and general information about Telemetry values can be found at:
http://www.arrakis.es/~ea1bcu/lo19.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

UO-22:
(Uplink: 145.9 or 145.975 MHz FM. Downlink 435.120 MHz FM
9600 Baud FSK.)
A problem with UO-22 seems to be related to the software changes that
were made last week prior to the last flight software reload. During
the last pass over Surrey on Saturday morning, June 7th, Chris Jackson
closed the spacecraft store and forward communications system for general
use to allow him to diagnose the problem..
[ANS thanks Chris Jackson, G7UPN / ZL2TPO,
Groundstation and Operations Manager, for this report.]

IO-26 (ITAMSAT)
(Uplink 145.875, 145.9, 145.925, 145.95 MHz FM, Downlink 435.822 MHz SSB,
1200 Baud PSK.)
IO-26 controllers report that the spacecraft is now in IHT mode. The new
ROBOT software is under currently undergoing tests. The beacon reports
that the digipeater is OFF and that the ROBOT is undergoing tests.
Controllers ask that groundstations please do not transmit on any of
the satellite's uplink frequencies for the time being.
[ANS thanks Daniele Piercarlo, IK2XRO, ITMSAT Command Station for this
report.]

(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
use the satellite if the beacon frequency wavers, or if downlink signals
```

chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

* Radio Sport-10's beacon, ROBOT and transponder remain silent while designer and builder Andy Papkov carries out experimental work with the satellite from the RS3A command station. Leonid Labutin UA3CR reports that it is hoped that RS-10 will be active again soon, long before it's tenth birthday.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite. Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w erp is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

* Radio Sport-16 currently has its Mode A transponder turned off. Reports out of Russia speculate that the transponder may be turned on for amateur use sometime in June. Andy Mirinov RK3KPK reports that RS-16 "now has a new voice on CW". All reports received by Andy of this latest Russian satellite will be answered by him with a QSL card.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

1997 June 6(Fri) 08:25z JA
13(Fri) 00:39z JD 1200bps PSK MailBox
20(Fri) 09:41z JD 9600bps FSK MailBox
27(Fri) 00:11z JA
July 4(Fri) 09:13z JD Digi-talker
8(Fri) 09:06z JA

* Mir Simplex has been suspened indefinitely due to the well publicized accident which has caused a major power loss onboard the space station.

* SAREX Mission STS-94 Nominal orbital data is now available on the AMSAT Web Page. The time-independent State Vector and the Keplerian elements corresponding to the scheduled launch time of 01-JUL-97 / 18:37 UTC are available at:

http://www.amsat.org/amsat/sarex/orbit.html

CREW MEMBERS with Amateur Radio call signs:
James D. Halsell, Commander, KC5RNI
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

The following STS-94 SAREX summary information was obtained from several sources at NASA, the ARRL, and AMSAT including portions of AMSAT News Service bulletin numbers $ANS-166.02 and $ANS-159.02.

During SAREX missions, the astronauts will typically make scheduled radio contacts with schools, random radio contacts with the Amateur Radio community and personal contacts with their families.

Seventeen schools, including one in the People's Republic of China, are scheduled to talk with the astronauts. During the earlier mission, Columbia's premature return to Earth on April 8 posponed all scheduled SAREX QSOs. Most of the schools on the earlier schedule remain on tap for the July mission, which will again carry the microgravity science lab. Three hams are among the STS-94 crew members.

Under the SAREX program, students at each of the selected schools ask questions of the astronauts during the contact. The primary goal of SAREX is to excite students' interest in science, math, technology and the U.S. space program.

STS-94 is a long duration shuttle flight where crew members will work in shifts around the clock. Shift team members are as follows:

RED TEAM
Commander (CDR): Jim Halsell, KC5RNI
Pilot (PLT): Susan Still
Mission Specialist (MS3): Donald Thomas, KC5FVF
Payload Specialist (PS2): Greg Linteris

BLUE TEAM
Mission Specialist (MS1): Janice Voss, KC5BTK
Mission Specialist (MS2): Michael Gernhardt
Payload Specialist (PS1): Roger Crouch

The SAREX Working Group has designated the following frequencies
during the STS-94 mission.

FM Voice Downlink: (Worldwide) 145.55 MHz FM
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz***
FM Packet Uplink: 144.49 MHz***

***If packet is on the air.

CONFIGURATION: Officially, the SAREX hardware is flying in
Configuration B. SAREX Configuration B is voice only, battery
operation. The SAREX equipment on-board STS-94 includes the Motorola
2-meter FM hand-held transceiver, 15 spare batteries, the window
antenna, SAREX headset assembly, personal recorder and the required
interconnecting cables. Since STS-94 is an extended duration flight with
power hungry primary experiments, the power allocated for SAREX is zero
watts. The SAREX team is also flying the Heathkit Packet Radio TNC for
potential use later in the flight. In the event that power conservation
measures are successful, the mission control team will advise SAREX and
the astronauts to initiate use of the Packet Radio system which also
includes one of the shuttle laptop computers or PGSCs.

Please stay tuned to these SAREX Working Group bulletins and
sarex@amsat.org during the mission for late breaking news regarding
packet operation.

CALL SIGNS:
FM voice call signs: KC5RNI, KC5BTK and KC5FVF
FM packet call sign: W5RRR-1 (If turned on during the flight)

Hams should avoid transmitting on the shuttle's downlink frequencies.
The crew will not favor any uplink frequency, so your ability to
communicate with SAREX will be the "luck of the draw." Transmit only
when the shuttle is within range of your station, and when the shuttle
station is on-the-air.

The crew will use separate receive and transmit frequencies. PLEASE do
not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your
receiving frequency. The UPLINK is your transmitting frequency.

QSL VIA: Send reports and QSLs to ARRL EAD, STS-94 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-94, date and time in UTC, frequency and mode (FM; voice or packet). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card.

STS-94 will be the 23rd flight of Columbia and the 85th mission flown since the start of the Space Shuttle program in April 1981.

[Radio amateurs are encouraged to relay these SAREX bulletins to their local packet BBS as long as the Bulletin IDentification (BID) is preserved. The BID is the character string beginning with the dollar sign ($), for example as in "SB SAREX @ AMSAT $STS-94.001" without the quotation marks.]

This FAQ is being updated and re-released on a weekly basis on or about Monday. Any constructive suggestions are always welcome.

For a couple of months I've been receiving the w1aw bulletins: propagation,
dx and keplerian elements. I have a couple of questions:

1. What are all those planetary indexes/sunspot numbers the propagation
report talks about? What do they mean and how are they obtained?

2. What exactly is the keplerian elements bulletin used for? How do you
interpret it? What is a keplerian element?

Message-ID: <33B99E08.561B@mail.schools.usq.edu.au>
Source record: 18496

Could someone help me! I am secondary high school teacher wanting to get students more involved with radio and science.

We own a scanner and were wondering if there is a satellite that transmits a strong tone that we could pick up and use its doppler shift to measure its velocity.

Next question; what interesting satellite freqs are there we could listen to? our scanner ranges from 27MHz-1.2GHz. Is there any interesting information we can obtain from satellites eg telemetry etc.

Any help would be great.

Regards

Jason

>NASA feeds from the satellites?
>
>Dish size / C/KU band ? receiver?
>
>Any information would be great..
>Not looking for the best, just adequate.

Maine is on the outer edges of most satellite footprints, though not too far out. You could probably do well with a 7-1/2' dish. I've done it here in Oregon, with very similar signal levels, with a 6', but that really isn't quite enough.

These days, C-Band (you don't need Ku) equipment is pretty cheap. If you don't need a descrambler, an old receiver can be had for $100.00 or less. Do make sure that the controller for pointing the dish is included, and that the remote control works properly. They can be VERY hard to find.

Search around the satellite dealers, and you will probably find an older dish for about $100.00 also. Just make sure that the dish has a bushing where it rotates, not just a bolt through a hole. The bolts get mighty thin with age, and the holes get really wide, though you could put a larger size bolt in by drilling and get a few more years out of it.

You will probably also want to get a positioner, which you should get new. Used ones tend to be on their last legs. One for a 7-1/2 ' dish used to be about $150.00. Don't go too cheap here. Cheapies tend to wear out really fast!

That leaves the installation. Many dealers will have the equipment pretty cheap, and then ding you hard for installing. Make sure you get the cost of installation before you buy!!!

SB SPACE @ ARL $ARLS022
ARLS022 Mir back on the air

ZCZC AS22
QST de W1AW
Space Bulletin 022 ARLS022
From ARRL Headquarters
Newington, CT July 2, 1997
To all radio amateurs

SB SPACE ARL ARLS022
ARLS022 Mir back on the air

Ham radio aboard the Mir has been getting some casual use again as the three-man crew continues efforts to get life back to normal aboard the Russian space station. General ham radio operation was suspended in the immediate wake of the mishap last week that damaged one of the Mir's compartments. But this week, US ham-astronaut Mike Foale, KB5UAC, expressed ''thanks for all your good wishes'' to hams around the world. The British-born Foale is using both 2 meters and 70 cm ''sparingly,'' according to SAREX Principal Investigator Matt Bordelon, KC5BTL. Werner Staubitzer, VO1CAT, in Pouch Cove, Newfoundland, reports he had ''a lengthy QSO'' with Foale over the weekend. Foale told VO1CAT that the crew was ''feeling fine and is making repairs to the damages as best they can while waiting for the required parts to arrive.'' Ray Webber, ZS6RSW, in Pretoria, South Africa, reports that he connected to Mir on packet (using the 145.800/200 split-frequency pair) on June 28.

Foale and his Russian cosmonaut crew mates again found themselves in crisis mode Wednesday, July 2, when the spacecraft lost attitude control. In a packet message to MIREX CEO Dave Larsen, N6CO, Foale related how, after the alarm sounded, ''we go rushing from one dark module to another, trying to look out windows, and point the solar arrays. The station dies very quickly if we don't do this.'' Foale compared the situation to ''being on a yacht at sea, with the wind changing all the time, and having to rush around pulling sails down, or putting them up, before a storm comes.''

Foale said the attitude failure has made the crew very wary of the next Progress rocket docking, set for Monday, July 7. ''Life on Mir is characterized by long periods of monotonous, serene calm, and short interludes of extreme frenzy, I am learning,'' Foale said.

The Progress rocket will supply cables and a special plate to fit over the hatch of the damaged Spektr science module. The crew will try to make cable connections to get the station back up to full power. Another Russian crew is scheduled to fly up in August to seal the leak and put the Spektr module back on line. Meanwhile, Foale and the cosmonauts are working on their new--but faulty--oxygen generator to get it back on line. They are using incendiary candles to supply oxygen temporarily.

Although the cosmonauts have begun practicing the repair routines, they and Foale still have a lot of time on their hands, and much of that is spent in darkness to conserve electricity. This means Foale has time for hamming, and, so far, no one's objected to his using a few watts of power for the radio. While Mir remains a space station in trouble, Foale is providing Amateur Radio with an intimate view of the danger and drama.

KB5UAC plans to operate frequently, whenever NASA and Moscow are not using their main communication channels. Look for him on 145.800 MHz, operating split. Occasionally, while Mir is over the US, you also may find him on 145.985 MHz (simplex).

To track the Mir spacecraft, check out http://liftoff.msfc.nasa.gov/temp/Mir_loc.html. The page presents a graphical representation of Mir's location and updates every minute.

(thanks to Roy Neal, K6DUE, for his contribution to this report)

Hi,
I have just cut the diode that lets you tune the radio over a wider range
it will read out 140.000 to 149.990 but will not lock below 144.000
i only want to be able to tune down to 143.625, any help or further mods
will be of great use ....

$$$ Big Time Mailbox Cash $$$

A little while back, I was browsing these newsgroups, just like you are
now, and came across an article similar to this that said you could make
thousands of dollars within weeks with only an initial investment of
$5.00! So I thought, "Yeah, right, this must be a scam," but like most
of us, but I was curious, so I kept reading. Anyway, it said that you
send $1.00 to each of the 5 names and address stated in the article. You
then place your own name and address in the bottom of the list at #5,
and post the article in at least 200 newsgroups. (There are
thousands.) No catch, that was it.

You can make up to or over $50,000.00 in 4-6 weeks, maybe sooner! I
SWEAR, I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're
interested in making some big bucks, keep reading; if you're not, I
apologize for wasting your time.

So after thinking it over, talking to a few people first, I figured what
have I got to lose except for 5 stamps and $5, right? One person who
very recently had tried it said it worked like a charm. He started
getting money in the mail! He was shocked! He figured it would end
soon, and didn't give it another thought. But then the money kept
coming IN - tripling in size and multiplying by 10 - 20 times the
amount that he got the first week! In his first week he had made a
total of over $1,000!!! In the third week he had over $10,000 dollars,
and it's still growing! This is his fourth week and he's made about
$42,000 Total, and believe it or not the money is still coming in...

I know this has been checked out several times with the legal community
and is deemed perfectly Legal, but being a very cautious person, I also
wanted to check it out with the US Post Office. I called them
(1-800-725-2161) and explained this process and asked if there were any
regulations that would be violated by doing this. Without hesitation,
the postal official also said it is legal. At that point, I felt
comfortable going ahead and joining the process.

Let me tell you how this works and most importantly, WHY IT
WORKS!...Also, make sure you print a copy of this article NOW, so you

get the information from it, and begin making money. The process is very simple, and it consists of 3 ease steps:

STEP 1: Get 5 separate pieces of paper and write the following on each
sheet of paper: "PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER #."

Get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not
be seen in the envelope (otherwise, nosy people who like to steal envelopes with money in it will not get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5
envelopes sealed, each having a piece of paper AND the $1 bill inside. NOTE: Make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this. This
is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

#1 P Gratrix
12165 Monaco Dr.
Brighton CO 80601

#2 T. Livingston
2361 Antietam Circle
Lemoore, CA 93245

#3 K. Burks
HC 01 Box 103
Keene Valley, NY 12943

#4 Paulo Aboim Pinto
Praceta 1º de Dezembro 5 c/v esquerda
2675 Odivelas / Portugal

#5 Miguel Kennedy
Avenida Nossa Senhora do Rosario Nº1042
2750-Cascais / Portugal

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you
need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well, do exactly the
following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To
News,
which
is in the top left corner of the newsgroup page. This will bring up a
message box.

2) Fill in the SUBJECT with a flashy title, like the one I
used,
something to catch the eye!!!

3) Now go to the message part of the box and retype this
letter
exactly
as it is here, with exception of your few changes. (Remember to add
your
name to number 5 and move the rest up)

4) When you're done typing in the WHOLE letter, click on FILE
above
the
send button. Then, SAVE AS.. DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE
IT. (So you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your
first
copy! (Click the SEND button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup
article
and
click the TO NEWS button again. Type in your flashy subject in the
SUBJECT BOX, then go to the message and place your cursor here. Now
click on ATTACHMENT which is right below the SUBJECT BOX. Click on
attach file then find your letter wherever you saved it. Click once
on
your file then click OPEN then click OK. If you did this right, you
should see your filename in the ATTACHMENT BOX and it will be
shaded.

NOW POST AWAY!!

IF YOU ARE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button,
highlight this entire article, then press the CTRL key and C key at
the
same time to copy this article. Then print the article for your
records
to have the names of those you will be sending $1.00 to.

NEXT, Go to the newsgroups and press POST AN ARTICLE type in
your
flashy subject and click the large window below. Press CTRL and V and
the article will appear in the message window. ** BE SURE TO MAKE YOUR
ADDRESS CHANGES TO THE 5 NAMES. ** Now re-highlight the article and
re-copy it re-copy it so you have the changes.... Then all you have to
do for each newsgroup is CTRL and V and press POST. It's that easy!!

THAT'S IT! All you have to do is jump to different newsgroupes
and
post away, after you get the hang of it, it will take about 30 seconds
for each newsgroup!

** REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE
MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF
200 **

This is WHY this works!

Out of 200 postings, say I receive only 5 replies (a very low
example).
So then I made $5.00 with my name at #5 on the letter. Now, each of
the
5 persons who just sent me $1.00 make the MINIMUM 200 postings, each
with my name at #4 and only 5 persons respond to each of the original
5, that is another $25.00 for me, now those 25 each make 200 MINIMUM
posts with my name at #3 and only 5 replies each, I will bring in an
additional $125.00! Now, those 125 persons turn around and post the
MINIMUM 200 with my name at #2 and only receive 5 replies each, I will
make an additional $626.00! OK, now here is the fun part, each of
those
625 persons post a MINIMUM 200 letters with my name at #1 and they
each
only receive 5 replies, that just made me $3,125.00!!! With an
original
investment of only $5.00!

AMAZING! And, as I said 5 responses is actually VERY LOW! Average is
probable 20 to 30! So lets put those figures at just 15 responses per
person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest
posting in the newsgroups, and send out another $5.00 to names on the
list, putting your name at number 5 again. Then start posting again.
The

thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles every day, JUST LIKE YOU are now!! So can you afford $5.00 and see if it

really works?? I think so - People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. ** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again
:)

Keplerian sets are used to up-date satellite tracking programmes.

Satellite orbits tend to change with time (the lower they fly, the more
they change), so tracking programmes need to have current information if
they are to remain accurate.

Can not help with question #1....sorry.

Good luck.

Source record: 18512

The well-known NASA time-delay mechanism has again been implicated in
a cover-up. The following image was recieved by an amateur radio
operator monitoring the GE2-9c satellite transponder. Officially,
transponder 9b carries the Pathfinder mission imagery, in the vertical
polarization mode. By accident, transponder 9C was found to be active
as well, though modulated with Horizontal polarization. The attached
snapshot demonstrates the reason for the time-delay. As in the 1994
Shuttle coverup the public has been robbed of free information
concerning our closest neighbors.
Demand the Truth!

Hi all.

Does anyone know if Shuttle comms are being re-broadcast locally on a ham frequency in the Greater Toornto Area?

Any help would be appreciated.

Thanks,

Jesse

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.

I just worked Mike Foale, KB5UAC/R0MIR during the 1420 UTC pass over north America. I was using 145.985 simplex. I was monitoring Mike talking on 143.625 MHz. He signed off there was I heard the packet station start up on 145.985 MHz. I decided to give a call, since I figured he must have just turned on the packet station after finishing his chat with controllers on 143.625. Well, its like hunting DX, when ya have a their operating pattern figured out, you have a better chance at making a contact. Mike Foale, KB5UAC, turned off the packet station and after he make a few adjustments, he and I QSO'ed until the end of the pass. I hope this helps some of you nab a contact with MIR. I monitor the 143.635 MHz with a scanner and monitor 145.985 and 145.200/800 split with a Ayes FT-736. 73 de Bj

Try scanning the 2 meter band. If you have shortwave ability WA3NAN
transmits on side band on:

3.860
7.185
14.285
14.295
21.390
21.395
28.650

You'll find them more on the first 2 freqs., from NY that's where they are
mostly found anyway, depends on the propagation...

Please notify listserv@amsat.org if you would like to subscribe, un-subscribe or change your Internet address for any of the AMSAT lists. You may request to be added or deleted from the following lists: AMSAT-BB, ANS, SAREX, or KEPS. Please *do not* send such requests to the lists themselves.

SB SAT @ AMSAT $ANS-187.01
SAREX QUITE ACTIVE ON STS-94

HR AMSAT NEWS SERVICE BULLETIN 187.01 FROM AMSAT HQ
SILVER SPRING, MD, JULY 06, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-187.01

The space shuttle astronauts have been quite active on SAREX since the launch of Columbia just a few short days ago. The launch of space shuttle Columbia occurred on time, in fact, 35 minutes prior to the initially planned July 1 launch time. Lift off (MET = 0) occurred at 18:02:00 UTC.

Seventeen schools, including one in the People's Republic of China, are scheduled to talk with the astronauts via Amateur Radio. During the earlier STS-83 mission, Columbia's premature return to Earth postponed all scheduled SAREX QSOs. Most of the schools on the earlier schedule remain on tap for this mission, which again carries the microgravity science lab. Three hams are among the STS-94 crew members.

Under the SAREX program, students at each of the selected schools ask questions of the astronauts during the contact. The primary goal of SAREX is to excite students' interest in science, math, technology and the U.S. space program. The Shuttle astronauts also perform voice and packet QSOs with hams on the ground.

STS-94 is a long duration shuttle flight where crew members are working in shifts around the clock. Shift team members are as follows:

RED TEAM
Commander (CDR): Jim Halsell, KC5RNI
Pilot (PLT): Susan Still
Mission Specialist (MS3): Donald Thomas, KC5FVF
Payload Specialist (PS2): Greg Linteris

BLUE TEAM
Mission Specialist (MS1): Janice Voss, KC5BTK
Mission Specialist (MS2): Michael Gernhardt
Payload Specialist (PS1): Roger Crouch

The SAREX Working Group has designated the following frequencies during the STS-94 mission.

FM Voice Downlink: (Worldwide) 145.55 MHz FM
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz
FM Packet Uplink: 144.49 MHz

Officially, the SAREX hardware was to fly in Configuration B, which is voice only, battery operation. However, power conservation measures have been successful to date and mission control advised the SAREX team and the astronauts to initiate use of the Packet Radio system. At the time this bulletin is being released, the packet system has not been confirmed to be active.

CALL SIGNS:
FM voice call signs: KC5RNI, KC5BTK and KC5FVF
FM packet call sign: W5RRR-1

The crew has great enthusiasm for the Shuttle Amateur Radio Experiment (SAREX) on STS-94. Case in point, MS3 Don Thomas, KC5FVF, set up the orbiting ham shack and completed nineteen random contacts BEFORE the "official" scheduled test pass.

"Columbia was calling CQ as they passed over the tip of Baja California. Don said I was the first contact with Columbia. Elevation here was only two degrees, but the signals were Q5 at 1629z" reported Dave Guimont, WB6LLO, via the SAREX e-mail list on Wednesday, July 2.

On Friday morning, July 4, the students of Crittenden Middle School of Mountain View, California quizzed CDR Jim Halsell, KC5RNI, via the AMSAT Telebridge Network through Gordon Williams, VK6IU, in Western Australia. Five questions were asked and answered. The students chanted in closing, "Happy Independence Day, Columbia!"

Just the day before, the Mountain View youths spoke with NASA Administrator Dan Goldin. Mr. Goldin was in town for the dedication ceremony of the new teacher's resource center at the NASA Ames Research Center. He expressed excitement regarding the student's upcoming SAREX contact with the shuttle astronauts and wished the students good luck.

Edgewater High School of Orlando, Florida made a direct contact on Orbit 32 using station KF4DKF set up at the school. The students interviewed MS1 Janice Voss, KC5BTK. AMSAT Representative Will Marchant, KC6ROL, reported from Houston, "Edgewater HS had a very nice contact with twelve questions asked and answered."

The Lexington Traditional Magnet School (callsign AE4PD) in Lexington, Kentucky spoke with MS2 Dr. Michael Gernhardt on Rev 35 through telebridge ground station N6IZW in San Diego. Dave Sublette, K4TO, for the school commented, "Most folks don't realize how much work you [NASA, AMSAT and ARRL] put into SAREX. Thank you!"

Late acquisition of the SAREX signal has been observed by terrestrial hams when the orbiter attitude was roughly "tail down, main engines forward" and the SAREX antenna in Window 1 (far leftmost from the pilot/commander seat perspective). If you don't hear Columbia shortly after your predicted rise time then patiently continue monitoring throughout the pass. Remember too that the crew is quite busy with the primary experiments.

QSL VIA: Send reports and QSLs to ARRL EAD, STS-94 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-94, date and time in UTC, frequency and mode (FM; voice or packet). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card.

Watch for the SAREX Working Group bulletins and sarex@amsat.org during the mission for late breaking news regarding SAREX operations.

[ANS thanks Pat Kilroy, WD8LAQ, AMSAT Development and Operations Team; and Frank H. Bauer, KA3HDO, AMSAT V.P. for Manned Space Programs, for these reports.]

SB SAT @ AMSAT $ANS-187.02
MIREX/ SAREX QSO

HR AMSAT NEWS SERVICE BULLETIN 187.02 FROM AMSAT HQ
SILVER SPRING, MD, JULY 06, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-187.02

The shuttle also had two successful opportunities to talk to fellow astronaut Mike Foale, KB5UAC, on the Russian Space Station MIR. Shuttle Commander Jim Halsell, KC5RNI, talked to Mike on MIR during both contacts. The first ship-to-ship SAREX/MIREX contact occurred on Saturday July 5 at 12:02 UTC (MET 003/18:49.) This contact was conducted over the Indian Ocean and lasted 30-45 seconds. The second MIR/Columbia conjunction occurred over the Pacific Ocean at 13:36 UTC (MET 003/19:34). Will Marchant of the AMSAT reported that this contact also lasted about 30 to 45 seconds. He stated that the shuttle crew could hear MIR for a lot longer due to MIR's better antenna and higher power radio. Pilot Susan Still reported observing MIR through binoculars while the ham radio contact was underway. Mr. Marchant, who was in the Customer Support Room of Mission Control during the two contacts, said "The shuttle crew was pretty excited about their contact on the Air-To-Ground communications loop". The crew shared this excitement with fellow astronaut Bill McArthur, KC5ACR, who was CAPCOM during the contacts.

[ANS thanks Pat Kilroy, WD8LAQ, AMSAT Development and Operations Team; and Frank H. Bauer, KA3HDO, AMSAT V.P. for Manned Space Programs, for this report.]

BID: $ANS-187.03

ANS has received this list of presentations and addresses to be given during the 1997 AMSAT-UK Colloquium.

Addresses by: Martin Sweeting OBE G3YJO, Professor of Satellite Engineering UoS, Chairman of AMSAT-UK; Ian Kyle, GI8AYZ, President of RSGB; Ray Soifer, W2RS.

Presentations:
P3D Ranging
- James Miller, G3RUH.
A new generation of UoSat Amateur Spacecraft - Chris Jackson, G7UPN (UoS).
A New Network Layer Protocol for a LEO Satellite Global Data Network
- Bao-zhong Cheng (UoS).
Optimising the LEO Satellite Communications Link Through Hybrid ARQ Techniques
- Valerie Chu (UoS).
On-Board Image Processing & Compression for Small Remote Sensing Satellites
- Peixin Hou (UoS).
38.4 Kbps Receiver Requirements - John Paffett (UoS).
Low Cost High Resolution Radar Altimetry Mapping by Micro/Mini Satellite
- Yuanxing Zheng (UoS).
The Station Program
- Paul Willmott, VP9MU.
Microwave Measurements
- (RSGB Microwave Committee).
The Kettering Group: From Hobby to Profession/Obsession
- Geoff Perry, MBE.
In Orbit Measurement of Long Term Interference Within the "Little LEO" and Amateur VHF Bands
- John Paffett (UoS).
Radio Astronomy, Practice & Problems
- Dr. John Ponsonby, University of Manchester (Jodrell Bank).
Latest State of P3D Integration & Launch Campaign
- Frank Sperber, DL6DBN, (AMSAT-DL).
Machinist Help Wanted !
- Fred Kennedy, ZL1BYP.
Phase-3D Construction (video); commentary by Ray Soifer W2RS
After Phase-3D, What ?
- Ray Soifer, W2RS.
Amateur Radio on the International Space Station
- R J C Broadbent (AMSAT-UK)
The Satgate Experience
- Andrew Sellers, G8TZJ.
Single Event Effects in Commercial Memory Devices Operating in the Space

Radiation Environment: A Decade of Research at Surrey
- Craig Underwood, G1WTW, (UoS).
Spacecraft Autonomy via Probabilistic RAM (pRAM) Artificial Neural Networks
- Mike Oldfield (UoS) [Paper read by Craig Underwood, G1WTW,. (UoS)].
Computer Security, a Briefing
- Richard Limebear, G3RWL, (AMSAT-UK).

Experts panel
AMSAT-UK Annual General Meeting
On Friday evening and Saturday there will be microwave test equipment (and people who know how to use it) available for people to test their projects

[ANS thanks Richard W L Limebear, G3RWL, for this information.]

SB SAT @ AMSAT $ANS-187.04
AMATEUR RADIO SATELLITE IMAGING

HR AMSAT NEWS SERVICE BULLETIN 187.04 FROM AMSAT HQ
SILVER SPRING, MD, JULY 06, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-187.04

At the AMSAT-NA Symposium to be held in Toronto, Canada in October 1997 Graham Ratcliff, VK5AGR, is planning a presentation entitled 'Amateur Radio Satellite Imaging - The Past, Present and Future'.

In this presentation Graham plans to give a brief overview of Amateur Satellite imaging hardware that has already flown in the past, is currently operational and those currently under construction and awaiting launch plus a step-by-step description of what hardware and software is required to decode and display these Amateur Satellite images, especially aimed at those who have never attempted it before. In particular, VK5AGR, plans to demonstrate how to use WiSP ,by Chris Jackson, G7UPN, to collect the raw images from the 9600 baud satellites and CCD Display by Colin Hurst, VK5HI, to display the images and some post-processing software such as PaintShop Pro.

Ratcliff has been active collecting the 9600 baud satellite images and has many examples from UO-22, KO-23, KO-25 and PO-28. He also has kept copies of any images from WEBERSAT-OSCAR-18.

[ANS thanks Graham Ratcliff, VK5AGR, for this information.]

/EX

SB SAT @ AMSAT $ANS-187.05
FIFTH ANNUAL JEWELRY CONTEST

HR AMSAT NEWS SERVICE BULLETIN 187.05 FROM AMSAT HQ
SILVER SPRING, MD, JULY 06, 1997
TO ALL RADIO AMATEURS BT

BID: $ANS-187.05

Announcing The Fifth Annual Jewelry Contest to take place at the AMSAT convention in Toronto in October of 1997. This years prize is a device that your lady will use to assist her in fastening a bracelet on her wrist. Leanore, KA6UCD, will have it at the convention; she will be happy to demonstrate it at any time.

The accompanying brademo.gif shows the "third hand bracelet fastener" being used. Thrdhand.gif is a picture of the device. An alligator clip is the "third hand".

Your problem, should you decide to take the assignment, is to estimate the frequency of the open stub, from which the handle is made.

It is an open, half wave stub constructed from 50 ohm .141 teflon insulated hardline that has a velocity factor calculated at 70.8%. The inside diameter of the coil is .5 inches; the 3 3/4 turns is 5 3/4" overall. The formed coil has absolutely no effect on the frequency, and the frequency is in an amateur satellite band. The SMA connector on the end will enable you to check the frequency when you win. NO measuring equipment other than a ruler is permitted.

The frequency has been determined accurately to two decimal places, but for contest purposes the "correct" answer has been carried out to six places to provide a tie-breaker. Please submit your answer in MHz. Leanore will have a supply of entry slips.

ALL are eligible to enter. Take your significant other to Toronto, and get two chances to enter the contest. THIS IS A FUN THING. In the event you will not be attending the convention be sure to get your answers to Leanore or Dave by the 10th of October.

The winner will be announced at the banquet, but you need not be present to win.

Look for a depiction at toron5.zip at
http://users.aol.com/dguimont
or on the digital birds.

[ANS thanks Dave Guimont, WB6LLO, for this report.]

SB SAT @ AMSAT $ANS-187.06
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 187.06 FROM AMSAT HQ
SILVER SPRING, MD, JULY 06, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-187.06

MIR:
Mike Foale, KB5UAC, has been active on amateur radio.. The radio has

served as a valuable link between Mike and his family and friends during
this crisis . Also activity from the MIR packet station has been reported.
Frequencies with activity have been 145.985 MHz and the 145.200/800 MHz
split.

SAFEX, MIR 70 cm Repeater
(Uplink 435.750 MHz FM, Downlink 437.950 MHz FM,
Subaudible tone 141.3 Hz)
Not operational at this time..

RS-10
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)
RS-10 Still silent.
RS3A needs some SWL reports of RS-10.
What time you heard RS-10, and also the date.
Send info via packet to Andy, .RS3A.
Packet: RK3KPK@RA3KP.MSK.RUS.EU

RS-12
(Uplink 21.21-21.25 MHz CW/SSB, Downlink 29.41-29.45 MHz or
145.91-145.95 MHz CW/SSB)
Operational.

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Operational.
WT0N reports that downlink signals are still weak from RS-15,
but the bird is still workable.
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
RS-16's 435.504 MHz beacon is active. Also,
the 29.408 MHz beacon is reported as being heard.
No transponder activity yet.
RS-16 CW Telemetry.
P PSU voltage Volts..... x0.1
O Solar panel voltage Volts..... x0.1
N Solar panel current mA
M TX 29 MHz Output Power mW..... x10
L TX 29 MHz current mA
K TX 29 MHz voltage 7V nominal
J TX 435 MHz Output Power mW..... x10
I TX 435 MHz current mA
H TX 435 MHz voltage V..... x0.1
G U of the transponder V..... x0.1
F U of stabilizer V..... x0.1
E Temperature of the charger in C deg.
D Temperature TX 29 MHz in C deg.
C Temperature TX 435 MHz in C deg.
B Temperature RX 145 MHz in C deg.
A Temperature of the stabilizer in C deg.

Parameters M, L, J, I are valid in FM mode only!

Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 , 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9
MHz CW/USB)
Operational. FO-20 in mode JA continuously
[ANS thanks Kazu Sakamoto, JJ1WTK, for this report.]

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK.)
KO-23 operating normally.

KO-25
(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM,
9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27
(Uplink 145.85 MHz FM, Downlink:
436.792 MHz FM (As of April 1, 1997)
Operating normally.
AO-27 (1-Jun-1997- 10:58 UTC Orbit-19182)
The satellite is working normally over North America.
and Europe.
Current AO-27 schedule information can be found at
www.umbra.com
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update.]

Well, that's because rec.radio.amateur was split into topical groups
several years ago. The reason that it has seen no traffic is that it's
no longer a valid newsgroup. If it's appearing on your server, that only
means that your news administrator isn't doing his job.

[Pointlessly long .sig deleted.]

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative >themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.
SEND TO: Photo Phoenix International

Of coarse they are using radio waves. It takes approx. 10 1/2 minutes to get
a signal to and from the lander. The rover can't transmit to Earth, it goes
through the lander which uses a high gain antenna. A nightlight in your house
has more wattage than what they are using to send/recieve signals.

Hi Devin,

I guess you have asked the $64K question about RS-10. I am also looking for info but there doesn't seem to be any. RS-12 is operating on 15M up and both 10M and 2M down. Good luck on RS-16. It can be a tough bird to work but with a little effort on the receive end work it regularly. If you choose the right orbit (and the right part of the orbit) good contacts can be made. If you are using an omni antenna you will probably need 100 watts of power for reliable contacts but with steerable antennas many contacts are made with 25 watts or less. Occasionally you can have a real live QSO!

Jesse: (And anyone else looking for rebroadcast shuttle audio):
Try the Amsat Web Page at:
http://www.amsat.org/amsat/sarex/shutfreq.html

I looked for Toronto, and didn't find anything. Only places in Canada
were Waterloo, ON, and Vancouver, BC.

I believe this web page also lists the HF frequencies.

Good Luck !

Roger

1942. Bifilar helical antenna for sale

Newsgroup: rec.radio.amateur.space
Date: 1997-07-08 00:00:00 UTC
From: ka3hsw@aol.com
Message-ID: <19970708010801.VAA14223@ladder02.news.aol.com>
Source record: 18552

Andrews brand bifilar helical, design frequency 245-315 MHz, but SWR is 1.5:1 or less over entire 430-450 band. 12 dB gain, RHCP. Obviously meant to be portable, as it knocks down into 2 sections, and the reflector folds up. Measures about 8 feet long assembled, reflector 3 feet in diameter.

Asking $150, picked up in Chicago area. Can't see any way to ship....

2Moderator: Sorry if out of conference.

Hello All,

Your help is heavily requested!!!

Our company named "Multi-Communication". We were established at January 1994. Our business - trade. We have a number of branches in different countries. We employ Russian-speaking staff there. We use office alpha-numeric paging system to organise its work. We would like to buy NEC paging receivers (pagers) from you.
We would like to receive the price on NEC-21A, NEC-26B, NEC-20B and, possibly, other 2-language Cyrillic-Latin alpha-numeric pagers. Please, send us by fax delivery terms and conditions on them, too.
We consider to place an order on
1000 NEC-21A (100-200 monthly - depending on prices),
1000 NEC-20B (100-200 monthly - depending on prices),
1000 NEC-26B (100-200 monthly - depending on prices).
System:
Frequencies: 159,825+MHz and 161,950+MHz,
Rate: 1200 baud,
Format: POCSAG.
Please, call us:
007 095 921-4709,
007 095 971-5514,
007 095 971-5328.
Our fax:
007 095 921-7780.

Our email:
m-comm@dol.ru

If you have no possibility to deliver such volumes directly, please give us the list of distributors with contact numbers.

Best regards,

Dmitri Ivanov
Multi-Communication

No. Rec.radio.amateur is a valid newsgroup. It *has* to exist in order
to have newsgroups below it in the heirarchy, IE the subdirectories
holding rec.radio.amateur.* go in the rec.radio.amateur directory on
the servers. But there is no reason to ever post directly to it, that's
what the topical newsgroups below it in the hierarchy are for. It
is merely a placeholder group in the heirarchy.

Sorry Gary, you're just plain wrong on this issue.

On news servers, the DIRECTORY "rec/radio/amateur" must exist in order
for "rec/radio/amateur/misc" (etc.) to exist.

There is no requirement for the news servers to recognize "rec.radio.amateur"
as a valid newsgroup. A review of existing USENET newsgroups will show
numerous examples where this is true.

USENET server software, primarily on UNIX systems, use an "active" file
to define which newsgroups are recognized by the site. The newsgroup
name is "mapped" to a physical directory name, where articles are stored
as individual numbered files based on an incremental value for the
group, as defined in the "active" file. There is absolutely no requirement
for me to define "rec.radio.amateur" in my active file before I can
define "rec.radio.amateur.misc".

Keplerian bulletins are transmitted twice weekly from W1AW.
The next scheduled transmission of these data will be Saturday,
July 12, 1997, at 2230z on Baudot and AMTOR.

1952. Radio Meteor Obs. Bull. June 1997

Newsgroup: rec.radio.amateur.space
Date: 1997-07-08 00:00:00 UTC
From: steyaert@vvs.innet.be
Message-ID: <steyaert.122.33C2AA86@vvs.innet.be>
Source record: 18562

Radio Meteor Observation Bulletin No. 47 July 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 deg (= E),
elev 27 deg
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

June 1997

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Notes:
. & sporadic-E.
. no observations on June 7-10 and June 11-14 because of thunderstorms.
. local time = UT + 2 hours.

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 30 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. local time = UT + 2 hours.

Pierre De Groote

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 3 element Yagi, direction south
Receiver: AR-8000 at 53.7600 MHz, SSB mode.
Transmitter: 30 kW TV video carrier near Bari, Italy, distance 700 km,
direction south. Several high mountains in transmitter
direction prevent direct and tropospheric reception.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, pictures with interference or sporadic-E signatures
are manually rejected.

All meteor counts below are corrected for a full hour observing time. If
the recording duration is 20-40 minutes, a dot is shown after the value.
Data for less than 20 minutes observing time are not shown here.

Meteor counts of reflections longer than 6.5 seconds: assumed
to be overdense.

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

Phil Karn, KA9Q, has pulled together quite a bit of info about
the Pathfinder radio links in order to figure out approximately
what the signal strength is at Earth; see his Web site at:

http://people.qualcomm.com/karn/

Of course, his calculations assume that you have a 34m dish in
your back yard. :-)

Also, for the other person who asked about decoding MPF telemetry,
JPL is posting the data and some Italian hams have written a
program to decode it. See:

http://www-dx.deis.unibo.it/htdx/mars/ind_mars.html

I think it's a zipped file, so it's probably for Windows or
DOS systems.

1956. Power problems on the sats

Newsgroup: rec.radio.amateur.space
Date: 1997-07-09 00:00:00 UTC
From: BJ Arts <bjarts@the-bridge.net>
Message-ID: <01bc8c0a$feaf6380$d9280ace@home.the-bridge.net>
Source record: 18565

As an OO I have received many completes about ops running High power on many of the amateur birds. During the past few days I have observed stations on FO -20 and 29 running enough power so that they are 5 to 10 s units above the beacon signal. In one case, the operators, 2 of them, were causing FO-20's agc to block out all other incoming signals. Just a rule of thumb for the satellites, keep an eye on your power and make sure that your downlink signal is not stronger then the beacon signal. A few s-units higher or lower is not too much of a problem. By running HIGH POWER the offending station(s) over a short or long period of time, make the use of these birds impossible for other stations, with low power or low gain antenna, to work. I can personally keep my power down to 5 watts and work the birds very well and still keep at the same signal strength as the beacon.

Some fixes to this problem. If you need that much power to hear your own downlink signal, its time to upgrade your receive hardware. Better coax, or preamps will help. As would better antenna(s). Also take a look at what the beacon is doing while you are on. See how high it gets during a pass. Use this high mark as a bench mark for your signal during the pass. I'm sure there are other good suggestions out there to help in keeping your power down.

I send this message to help others who might want to use the birds but do not have big gun stations. The complaints I have received covered the RS birds to AO-10. I have received many complaints and will observe the birds for power compliance. Both CW and SSB ops should take a look at what they need power wise to work the birds. Too much power can and does cause others to be knocked out of use of the sats. I hope this helps others out there to be able to work the sats with lower or low power. 73 de Bj

Downlink 145.800 FM

Simplex 145.985 FM

SAFEX Repeater(Mir)*
Uplink 435.750 FM subaudible tone 141.3
Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
```

use the satellite if the beacon frequency wavers, or if downlink signals chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

* Radio Sport-10's beacon, ROBOT and transponder remain silent while designer and builder Andy Papkov carries out experimental work with the satellite from the RS3A command station. Leonid Labutin UA3CR reports that it is hoped that RS-10 will be active again soon, long before it's tenth birthday.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite. Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w erp is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

* Radio Sport-16 currently has its Mode A transponder turned off. Andy Mirinov RK3KPK reports that RS-16 "now has a new voice on CW". All beacon reports received by Andy of this latest Russian satellite will be answered by him with a QSL card.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

1997 July 8(Fri) 09:06z JA

* Mir Simplex - Astronaut Mike Foale has been making the odd contact with radio amateurs on 2M. Both 145.800 down 0.600 split and the 145.985 simplex have been used.

* SAREX Mission STS-94 Nominal orbital data is now available on the AMSAT Web Page. The time-independent State Vector and the Keplerian elements corresponding to the scheduled launch time of 01-JUL-97 / 18:37 UTC are available at:

http://www.amsat.org/amsat/sarex/orbit.html

CREW MEMBERS with Amateur Radio call signs:
James D. Halsell, Commander, KC5RNI
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

The following STS-94 SAREX summary information was obtained from several sources at NASA, the ARRL, and AMSAT including portions of AMSAT News Service bulletin numbers $ANS-166.02 and $ANS-159.02.

During SAREX missions, the astronauts will typically make scheduled radio contacts with schools, random radio contacts with the Amateur Radio community and personal contacts with their families.

Seventeen schools, including one in the People's Republic of China, are scheduled to talk with the astronauts. During the earlier mission, Columbia's premature return to Earth on April 8 posponed all scheduled SAREX QSOs. Most of the schools on the earlier schedule remain on tap for the July mission, which will again carry the microgravity science lab. Three hams are among the STS-94 crew members.

Under the SAREX program, students at each of the selected schools ask questions of the astronauts during the contact. The primary goal of SAREX is to excite students' interest in science, math, technology and the U.S. space program.

STS-94 is a long duration shuttle flight where crew members will work in shifts around the clock. Shift team members are as follows:

RED TEAM
Commander (CDR): Jim Halsell, KC5RNI
Pilot (PLT): Susan Still

Mission Specialist (MS3): Donald Thomas, KC5FVF
Payload Specialist (PS2): Greg Linteris

BLUE TEAM
Mission Specialist (MS1): Janice Voss, KC5BTK
Mission Specialist (MS2): Michael Gernhardt
Payload Specialist (PS1): Roger Crouch

The SAREX Working Group has designated the following frequencies during the STS-94 mission.

FM Voice Downlink: (Worldwide) 145.55 MHz FM
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz***
FM Packet Uplink: 144.49 MHz***

***If packet is on the air.

CONFIGURATION: Officially, the SAREX hardware is flying in Configuration B. SAREX Configuration B is voice only, battery operation. The SAREX equipment on-board STS-94 includes the Motorola 2-meter FM hand-held transceiver, 15 spare batteries, the window antenna, SAREX headset assembly, personal recorder and the required interconnecting cables. Since STS-94 is an extended duration flight with power hungry primary experiments, the power allocated for SAREX is zero watts. The SAREX team is also flying the Heathkit Packet Radio TNC for potential use later in the flight. In the event that power conservation measures are successful, the mission control team will advise SAREX and the astronauts to initiate use of the Packet Radio system which also includes one of the shuttle laptop computers or PGSCs.

Please stay tuned to these SAREX Working Group bulletins and sarex@amsat.org during the mission for late breaking news regarding packet operation.

CALL SIGNS:
FM voice call signs: KC5RNI, KC5BTK and KC5FVF
FM packet call sign: W5RRR-1 (If turned on during the flight)

Hams should avoid transmitting on the shuttle's downlink frequencies. The crew will not favor any uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw." Transmit only when the shuttle is within range of your station, and when the shuttle station is on-the-air.

The crew is using separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

QSL VIA: Send reports and QSLs to ARRL EAD, STS-94 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-94, date and time in UTC, frequency and mode

(FM; voice or packet). In addition, you must also include a SASE using
a large, business-sized envelope if you wish to receive a card.

STS-94 is the 23rd flight of Columbia and the 85th mission
flown since the start of the Space Shuttle program in April 1981.

[Radio amateurs are encouraged to relay these SAREX bulletins to
their local packet BBS as long as the Bulletin IDentification (BID)
is preserved. The BID is the character string beginning with the
dollar sign ($), for example as in "SB SAREX @ AMSAT $STS-94.001"
without the quotation marks.]

This FAQ is being updated and re-released on a weekly basis on

Somewhere in the 1.9 GHz range. Thats all I heard. It would be neat if a HAM could RX the signal, now decoding it would be another thing. Then you could debunk all those skeptics saying Pathfinder is not on Mars.

You're right it is slow, better use subspace to convey information then
electromagnetic waves in free space. :)

Paul.

Some people think there is a massive conspiracy out there, governments
covering up UFOs, faking everything, telling people lies etc.
Well I have shocking news for you, the pictures you see are actually
real, there is no "cover-up". Your "cover-up" story is too perfect for
such thing to exist. When will you come back to the real world?

Paul.

Great! When will the handheld version be available?

I'm working on a new UDP protocol, perhaps you would like to implement
it on your web site. It's called CWTP "Continuous Wave Transport
Protocol". It will allow you to send morse code over the Internet and
you can even call CQ with multicast.

1979. GPS antennae - Anyone know how to make one?

Newsgroup: rec.radio.amateur.space
Date: 1997-07-10 00:00:00 UTC
From: dnult <dnult@concentric.net>
Message-ID: <33C56CDC.E42@concentric.net>
Source record: 18439
Cross-posted to: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.space

Are there any hams (or non-hams) out there that have built or seen plans for a mobile GPS antenna? I have a Garmin GPS-40 GPS reciever with an external jack. An external antenna, I've found, is a requirement for reliable mobile GPS operation.

The GPS frequency is 1575.42 Mhz. The antenna needs to have enough gain to exceed coaxial cable losses (haven't selected a cable yet) and have resonably omni-directional response. I'm not sure, but I'd guess the satalite signal is horizontally polarized. I've wondered about a 1 turn helical and even a spiral on copper clad. Problem is I don't have equipment to test antennae at this frequency.

Thanks in Advance

73s de KI5XW

There was an article in QST magazine (Oct 95) by Harold Ward, W1GE on a
patch antenna for GPS.
It can also be found under:
gpspatch.zip (11530 bytes) has a description and drawing for the
construction of a simple patch antenna for GPS reception.
at website:
http://vancouver-webpages.com/peter/index.html
By the way, the satellite signal is right hand circularly polarized.
Good luck,
John

I know they have the option of using the new freq. while over the U.S.,
don't know why you couldn't decode it though. Have you been able to decode it
before this? Was the signal strong enough?

That's true, you can manually hack the system and create a directory without making an entry in the active file. But that isn't usual practice. Normally when a hierarchy is created, group creation control messages will be generated for every level of the hierarchy tree. The news server will then automatically create both the directories and the entries in your active file.

If you're one of the relatively rare ultra-paranoid sysops, you may have the flag set to prevent automatic group creation, and do as you suggest manually. I don't think many full feed server sysops do this though. Sysops who only carry a partial feed may be more likely to do this.

Space Bulletin 023 ARLS023
From ARRL Headquarters
Newington, CT July 11, 1997
To all radio amateurs

SB SPACE ARL ARLS023
ARLS023 SAREX contacts successful

Ham radio has had a very prominent role in the shuttle Columbia mission STS-94, which continues until July 17. So far, the STS-94 crew--which includes three hams--has racked up 13 successful SAREX contacts with school groups as well as random QSOs with earthbound hams. Aboard the shuttle are Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF, who set up the orbiting ham shack and completed 19 random contacts before the ''official'' scheduled test pass.

Seventeen schools, including one in the People's Republic of China, are scheduled to talk with the astronauts via Amateur Radio. So far, all SAREX contacts have been successful.

On Thursday, July 3, students at Edgewater High School in Orlando, Florida, spoke with the astronauts. Later the same day, the Lexington Traditional Magnet School in Lexington, Kentucky, made contact with Columbia after a frustrating initial attempt. All of the students asking questions are recently licensed amateurs.

On Friday, July 4, the students of Crittenden Middle School of Mountain View, California quizzed Commander Jim Halsell, KC5RNI, via the AMSAT Telebridge Network through Gordon Williams, VK6IU, in Western Australia. In closing, the students chanted ''Happy Independence Day, Columbia.''

On Monday, July 7, the Columbia crew spoke with students at the S. J. Davis Middle School in San Antonio, Texas (via Steve Cerwin, WA5FRF). Fourteen students at the school got to chat with Halsell, and the school district taped the event.

Also on Monday, pupils at Burch Elementary School in Tyrone, Georgia, (via Bob Watson, KN4HH) got to ask the astronauts an even dozen questions. Teacher Kathy Akins reported an ''excellent'' contact

with astronaut (payload specialist) Greg Linteris aboard the Columbia. Later on Monday, a crowd of 600 was in the audience as youngsters at Artesia Public Schools in Artesia, New Mexico, (via Bob Perkins, KU5J) put 18 questions to the astronauts. ''It was great.'' said teacher Camille George.

On Tuesday, July 8, pupils at Mountain View Elementary in Dewey, Arizona, started their day with a very nice chat with Halsell, via the station of Dave Boone, AB7JA. For most of the pass, signals were quite strong. Approximately 100 people were in attendance, and six students got to ask 11 questions. Later on Tuesday, Jenny Dunklee's summer astronomy class at the Ione Junior High School in Jackson, California, was excited to be able to include a contact with Janice Voss on their second day of summer classes. Dunklee spoke enthusiastically about this ''great opportunity for my students'' to learn firsthand about space exploration.

On Wednesday, July 9, students and members of the Foursquare Radio Amateur Youth club, KE6SWH, were excited to complete a contact with Halsell aboard Columbia. A number of the students had recently obtained ham tickets in preparation for the shuttle contact. Students were from Oxnard High School and Hale Middle School of Woodland Hills. Oxnard High Principal Daisy Tatum said the students were very enthusiastic and excited about completing the contact. Also on Wednesday, students at Lawrence Intermediate School, Lawrenceville, New Jersey, enjoyed a chat with Halsell. Students asked 11 questions as an audience of 450 looked on.

On Thursday, July 10, Alvin C. York Agricultural Institute, Jamestown, Tennessee, had what was described as ''a difficult contact'' with Jamestown native (and payload specialist) Roger Crouch at the mike of KC5RNI. Despite the very rough copy, the school reported five questions were answered. Crouch's mother was in attendance.

On Friday, July 11, successful SAREX contacts took place with Dunn's Corners Elementary School, Westerly, Rhode Island, and Center Street School, El Segundo, California. A SAREX contact with Tsinghua University in the People's Republic of China is set for Monday, July 14.

The STS-94 crew will use KC5RNI, KC5BTK, and KC5FVF on FM voice and W5RRR-1 on packet. They'll be available for random QSOs during their breaks, before and after meal time, and during their pre-sleep time. The astronauts also have activated the robot packet system. (Do not be surprised if you see ''STS-83'' in its beacon.) Edward Chuang, BV1AF, reported hearing the STS-94 packet signal July 10, at 0057 UTC from his QTH in the northeastern part of Taiwan, although he did not connect.

Additional STS-94 mission information is available from NASA at the NASA Shuttle Web site, http://shuttle.nasa.gov.

1988. CABLE TV--FREE DECODER PLANS--

Newsgroup: rec.radio.amateur.space
Date: 1997-07-11 00:00:00 UTC
From: Edward Witt <superted@worldnet.att.net>
Message-ID: <01bc8e48$0aa97b00$537074cf@default>
Source record: 18448

Now you can get new plans to build a Cable Descrambler System, US and UK plans.

This is not the origonal Radio Shack plan (now obsolete), but a choice of six new up to date plans designed to work on any cable box in any area. Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area, and you will be able to view all premium and pay per view channels.

It works on all Cable Tv Systems. The parts to make the box cost appoximately $15 (depending on the plan) and you can find them at any local electronic part supplier(US Residents will be supplied with radio shack part numbers). British Sky Cable descrablers cost approx 20 Pounds. Remember this is for educational purposes only, you still have to pay for the channels you view. I have to say that to protect myself for any liablity.

For the Plans just send $ 2 or 2 Pounds to:

Ed Hacker
409 Adams Street # 7
Hoboken, NJ 07030
USA

The reason I charge two dollars is for the stamp, envelop, and paper your plans are on. I am doing this for you not for me to make money. Lets get real you cant buy much for two bucks. I am not in this for the money but to get back at the cable companys that over charge people.

CABLE HANDBOOK (Additional $2)

Everything you ever wanted to know about cable boxes. Includes a cross reference list for upgrading your box using upgrade converts, cubes, plug-in activators and service code-generators. Also explains general cable operation, this handbook is very COMPLETE, a must have!

TURN ME ON!

Turn on all your premium channels with nothing to buy.

The Notch Filter

A notch filter allows you to selectively descramble channels. For instance, if HBO is on channel 7 and Cinemax is on channel 14 or pay-per-view is on 22, you may build a notch filter to descramble each of those channels. This method is fairly simple to build; However, it requires several more parts than the Fifteen Dollar Box. This system will work on your cable system, no matter what frequency your cable system operates on. A cable box is NOT

REQUIRED, and parts cost in the range of $25-30 depending on how many channels pay channels you wish to descramble. NOTE: I used channel 7,14 and 22 as an example. Your premium services may be on other channels and the notch filter can be built for whatever channel your premium services are on. (between the range of 2-22) Parts can be purchased from a electronics wholesaler/retailer in your phone.

The Gated Sync is the Grand Daddy of descramblers (in band and out band). It can be configured to operate on your cable systems frequency. This system is for the serious home electronics buff. It is a bit more complex to build; However, it sells for a lot of money. And, it will descramble EVERY channel.

SSAVI was created by Zenith, and used by many Zenith converters. The system is very difficult to build, but it will descramble EVERY channel, and also sells for a lot of money. Novices should not attempt to build the SSAVI system.

FREQUENTLY ASKED QUESTIONS

What is a Descrambler?

A descrambler is a device that restores the picture and sound of a scrambled channel. In most cases, ALL channels which are scrambled will be restored.

Are Descramblers legal?

YES! It is legal to build, sell, ship, use, and own a descrambler; However, when you use a descrambler, it is your responsibility to notify the cable company that you are accessing their signal.

Do I need a converter from my cable company?

In most cases NO. A cable ready VCR or TV will work.

Is it difficult to build a descrambler?

Turn me on, the Fifteen Dollar Box, the Oak converter and the Foil method are very simple methods! The instructions provide step by step instructions. No special skill or knowledge are needed. The Notch filter is still fairly simple. The Gated Sync is not for the beginner, it requires electronics knowledge.

Can I build more than one?

YES! You may build as many descramblers as you want! They are legal to sell and demand fairly high prices!

Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area
For the Plans just send $ 2 or 2 Pounds to:

SB SPACE @ ARL $ARLS024
ARLS024 KB5UAC grateful for ham radio on Mir

ZCZC AS24
QST de W1AW
Space Bulletin 024 ARLS024
From ARRL Headquarters
Newington, CT July 11, 1997
To all radio amateurs

SB SPACE ARL ARLS024
ARLS024 KB5UAC grateful for ham radio on Mir

In a packet message to Dave Larsen, N6CO, of the MIREX support team, US astronaut Mike Foale, KB5UAC, expressed the gratitude of the Mir crew ''for all the good wishes and interest over the world, in our troubles and tribulations.'' The MIREX support team--Miles Mann, WF1F, and Larsen--has been handling family traffic for Foale via ham radio and attempting to help him with his radio problems (the Mir's transceiver was cutting out on high power because of a circuit overload). Foale singled out for special mention ''the few hams who work tirelessly on our behalf'' to pass personal messages. Foale said that he and his wife were ''extremely grateful to those hams who pass our messages for us.'' After the Mir*s collision with a Progress cargo rocket, Foale said, ''it was impossible to get any personal news of our well-being to our families'' via the official communication channels. ''Ham radio allowed us to fill the gap.''

''We are particularly interested in longer contacts, than simple QSO exchanges,'' Foale said. ''It is good to tell people about our life here on Mir, and our problems, but the lives of hams on Earth are also interesting to us, and I hope more hams will take the time to tell us about their QTH and surroundings also,'' he concluded.

Ham radio has served as a convenient ''chat'' medium between the US space shuttle Columbia and the troubled Russian Mir space station in recent days. Last weekend, shuttle Commander Jim Halsell, KC5RNI, had two short, direct 2-meter contacts with Foale aboard Mir. The first ship-to-ship SAREX/MIREX contact happened Saturday, July 5, during a Mir/Columbia ''conjunction'' over the Indian Ocean. The contact lasted less than a minute. A little while later, with both spacecraft over the Pacific Ocean, another 30-45 second contact took place, according to Will Marchant, KC6ROL, of AMSAT. ''The shuttle crew was pretty excited about their contact,'' he said. But the best QSO was yet to come. On Tuesday, July 8, 1900 UTC, Foale contacted

W5RRR, which patched him through NASA's communications circuits to the space shuttle, enabling Foale to speak at length with the Columbia crew. During the ten-minute contact, Foale filled in his fellow astronauts about the situation aboard Mir, where a Progress supply rocket had just successfully been docked.

''We'd like to invite you to visit Mir,'' Foale said to the shuttle crew, which respectfully declined. Foale said the arrival of the Progress was ''almost like Christmas.'' He said his personal items still in the damaged Spektr module had been replaced, along with a videocassette player. Foale told Halsell the Mir crew enjoys watching American movies when they have the time. He also told his fellow astronauts aboard the Columbia that he had not had a chance to see any of the pictures from the Mars Pathfinder mission as yet. Foale said the Progress carried tea, coffee, chocolate and even fresh food.

Other Columbia-Mir conjunctions will be possible through the mission but whether another contact is attempted depends on the Columbia and Mir work schedules.

On July 10, Foale told N6CO in another packet message that the crew was ''extremely busy, trying to crawl through all the bags unloaded from Progress.'' Foale said the crew will do a training run on July 15 prior to the space walk to attempt to repair the damage and restore power to the space station. Foale will sit out the space walk in the Soyuz vehicle.

Thanks to Philip Chien, KC4YER, Pat Kilroy, WD8LAQ, Frank H. Bauer, KA3HDO, Dave Larsen, N6CO, Matt Bordelon, KC5BTL, and Rosalie White, WA1STO, for their contributions to this bulletin.

Radio waves travel at the speed of light,which is,if my mem serves me correctly,something on the order of 186,000 MPS.A co-worker told me,during a casual discussion,he heard it took appx 11 minutes for comms between Earth and Mars.I dont know how accurate this is and not sure if it was one way or round trip.

>http://people.qualcomm.com/karn/mpf_budget.html
>Phil Karn, KA9Q, states that the transmit frequency from
>Mars to Earth is 8420 MHz, with transmitter power of 35 Watts.

Phil estimated that value. If you look at message
<33C4E08D.314@ksc.nasa.gov> from this newsgroup, you'll
see that Steve Schindler later posted that the actual
freqs. are 8427.22222 MHz and 8429.938271 MHz. But Phil's
estimate was sufficient for what he was trying to do.

I also recommend that people go to Phil's main page
first and then follow the link to his Pathfinder data
calculations page. That way you can see his photo of
John De Lancie and Brent Spiner. :-)

* MIR NEWS *
============
News of Mir's Progress docking and EVA has been reported by Mike Foale via
the Amateur Packet Radio communications system on-board the Mir space station:

Stat : PR
Posted : 07/07/97 09:40
To : ALL
From : R0MIR
@ BBS :
BID :
Subject: Mir Progress Docking

Progress docked normally this morning. We are waiting 3 orbits before
we start to unload it, checking the integrity of the hatch seals.
The station attitude control system is working well, using the girodynes,
and the power sth the base block and module Kvant 2 powered (airlock and
toilet) with modules Kristal and Priroda [are] unpowered. Greenhouse
experiment is continuing, using power from the base block, to dry the
seed pods that have formed quite nicely.

Stat : PR
Posted : 07/11/97 16:08
To : ALL
From : R0MIR
@ BBS :
BID :
Subject: Mir EVA

The crew is now extremely busy, trying to crawl through all the bags
unloaded from Progress, which are now stored in dark, wet modules, which
have no power. We are trying to inventory and assemble the 30 or so

cables and adapt, required to install the hatch
umbilical. A training run will be done on the 15th, and the real eva
sometime after that. I will get some refresher training on preparing the
soyuz for evacuation, and will be in a spacesuit,b,in the Soyuz during the
eva itself.

I will still try to read all your messages, but will have to leave most
unanswered because of the little time available to us. Mike. KB5UAC

[Info via Dr. Dave Larsen, and Miles Mann]

* HIGH POWER NOT WELCOME ON OSCARS *
==========

BJ Arts, WT0N, serves as an Official Observer (OO), and has received many complaints about satellite operators running excessively high levels of transmitter power within the uplink passband of Amateur communication satellites. Last week he observed stations on FO-20 and FO-29 running enough power to be 5 to 10 'S' units above the level of the beacon signal. In one case, two operators, who were in contact with one another, were causing FO-20's AGC to block out all other incoming signals operating with normal levels of transmitter power.

Satellite users should make certain that their downlink signals are no stronger than that of the beacon transmitter. Excessive levels of uplink power pervent other users from equally sharing the satellite's transponder. It only takes several watts of transmitter power to make contacts through low-earth orbiting Amateur satellites. If groundstations have difficulty hearing their uplink signal with more than several watts of power, then a significant upgrade in receiver sensitivity may be in order. This can be accomplished by using a higher gain downlink antenna, high quality coax, or the use of a low-noise preamplifier (preferably mounted at the feedpoint of the antenna).

* AO-27 SCHEDULE *
==========

AO-27 TEPR (Timed Eclipse Power Regulation) States are expected to follow the following schedule (as of July 6, 1997):

TEPR STATE	Time	TX Status
1	N/A	OFF
2	N/A	OFF
3	---	OFF
4	21	OFF
5	17	ON at Medium Power
6	---	OFF

The TEPR States are defined as follows:

TEPR 1, Started when the satellite enters the earth's shadow (eclipse)
TEPR 2, Started at (TEPR 1 time) after the eclipse starts
TEPR 3, Started at (TEPR 1 time) + (TEPR 2 time) ...

TEPR 4, Started when the satellite enters sunlight
TEPR 5, Started at (TEPR 4 time) after the satellite enters sunlight
TEPR 6, Started at (TEPR 4) + (TEPR 5) ...

Please note that TEPR states 1, 2 and 3 occur during nighttime passes, and TEPR states 4, 5 and 6 occur during the day. These occur during EVERY pass, not just over the U.S.A.

The times assigned to the TEPR states are chosen for the health of the satellite over operation convenience. Therefore, during parts of the year the satellite will turn on late or turn off early as seen by ground stations.

Users are reminded that as an FM-mode repeater, AO-27 is subject to the "capture effect" and can only transmit one signal at a time. Users are asked to cooperate, keep calls short, give breaks so as many stations as possible can work a pass, and above all, listen before and while transmitting. The satellite has a very sensitive receiver, and stations running approximately 25 watts power to moderate-gain omnidirectional antenna can get a good uplink signal into the satellite. A sensitive UHF-FM receiver with a preamplifier and an omnidirectional antenna can receive AO-27's downlink with some fading; moderate-gain directional arrays should provide a solid receive signal. Remember to correct for the +/- 9 kHz of Doppler shift on the 436 MHz downlink signal during a pass. No Doppler correction is needed for the 145.850 MHz uplink signal.

Users are asked not to transmit on 145.85 MHz if they do not hear the satellite's downlink so as to avoid possible interference to other satellite uplinks and downlinks on adjacent frequencies.

This, and other information on the AO-27 satellite can be can be found at: http://www.umbra.com.

[Info via Michael Wyrick, N4USI, AO-27 Control Operator]

* FO-29 SCHEDULE *

Aug 1 (Fri) 08:17z JD 1200 bps
Aug 8 (Fri) 00:30z JD 9600 bps
Aug 15 (Fri) 01:08z JA
Aug 22 (Fri) 08:26z JD 1200 bps
Aug 29 (Fri) 00:40z JD 9600 bps

Sept 5 (Fri) 01:18z JA
Sept 12 (Fri) 00:13z JD 1200 bps

Sept 19 (Fri) 00:51z JD 9600 bps
Sept 26 (Fri) 08:09z JA

FO-20 is in Mode JA continuously.

* RS-12 NEWS *
==============
Rusty, NM1K, reports a new regular on RS-12: KL7AH. KL7AH can often be heard on the east coast of US during passes having elevations of 20 degrees of less above the horizon.

* STS-94 SAREX NEWS *
=====================
The SAREX experiment package on Space Shuttle Columbia has been activated in both voice and packet radio modes. An archive of messages regarding STS-94 SAREX bulletins is available at:

http://www.gsfc.nasa.gov/sarex/sarex_mainpage.html

The SAREX Working Group has designated the following frequencies during the STS-94 mission:

FM Voice Downlink: (Worldwide) 145.55 MHz FM
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz
FM Packet Uplink: 144.49 MHz

FM Voice call signs: KC5RNI, KC5BTK and KC5FVF
FM Packet call sign: W5RRR-1

A surplus of power in the Microgravity Science Laboratory has permitted packet radio operations to take place on STS-94. Since STS-94 is a re-flight of the shortened STS-83 flight, and since the SAREX gear did not go back to NASA/JSC from KSC and was not re-programmed after STS-83, the Heathkit SAREX TNC aboard Columbia reports "STS-83" in downlink packets.

Hams should avoid transmitting on the shuttle's downlink frequencies. The crew will not favor any uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw." Transmit only when the shuttle is within range of your station, and when the shuttle station is on-the-air.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

Late aquisition of signal continues to be observed while the orbiter attitude is roughly "tail down, main engines forward". Most contacts reported occur well after rise time, but not necessarily after TCA, due to the observers squint angle of the antenna on Columbia. AOS seems to be about 1.5 to 2 minutes after rise.

Send reception reports and QSLs to ARRL EAD, STS-94 QSL, 225 Main Street,
Newington, CT 06111-1494, USA. Include the following information in
your QSL or report: STS-94, date and time in UTC, frequency and mode
(FM voice or packet). In addition, you must also include a SASE using
a large, business-sized envelope if you wish to receive a card.

STS-94 represents the 23rd flight of Columbia and the 85th mission flown
since the start of the Space Shuttle program in April 1981. Be advised
that the next SAREX mission is not scheduled until August 1998. A great
deal of effort is being made toward the next phase of SAREX: implementation
on the International Space Station.

SB SAT @ AMSAT $ANS-194.01
QUESTIONABLE COMMUNICATION(S)

HR AMSAT NEWS SERVICE BULLETIN 194.01 FROM AMSAT HQ
SILVER SPRING, MD, JULY 13, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-194.01

For some months, complaints have been received from KO-23 and KO-25 users that communications many felt were inappropriate to be carried over Amateur Radio, have been taking place on those satellites. Reports stated that the offending traffic was taking place between a station located in Brazil and another at a Brazilian scientific research base in Antarctica.

AMSAT-NA officials have been concerned about this issue for some time and have been monitoring the situation. However, they did not feel it appropriate for them to become directly involved, as the satellites in question are licensed in Korea and the communication was between stations licensed by Brazil.

It has now been learned that the communications in question have ceased. Resolution of the situation was apparently brought about through agreements reached between the Brazilian users of the satellites and the Korean command station.

Although AMSAT-NA officers did not believe it appropriate to directly intervene, they are, nevertheless happy that the situation has apparently been resolved satisfactorily.

[ANS thanks AMSAT-NA President, Bill Tynan, W3XO, for this bulletin.]

SB SAT @ AMSAT $ANS-194.02
KB5UAC GRATEFUL FOR HAM RADIO

HR AMSAT NEWS SERVICE BULLETIN 194.02 FROM AMSAT HQ
SILVER SPRING, MD, JULY 13, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-194.02

In a packet message to Dave Larsen, N6CO, of the MIREX support team, US astronaut Mike Foale, KB5UAC, expressed the gratitude of the MIR crew ''for all the good wishes and interest over the world, in our troubles and tribulations.'' The MIREX support team--Miles Mann, WF1F, and Larsen--has been handling family traffic for Foale via ham radio and attempting to help him with his radio problems (the MIR's transceiver was cutting out on high power because of a circuit overload). Foale singled out for special mention ''the few hams who work tirelessly on our behalf'' to pass personal messages. Foale said that he and his wife were ''extremely grateful to those hams who pass our messages for us.'' After the MIR's collision with a Progress cargo rocket, Foale said, ''it was impossible to get any personal news of our well-being to our families'' via the official communication channels. ''Ham radio allowed us to fill the gap.''

''We are particularly interested in longer contacts, than simple QSO exchanges,'' Foale said. ''It is good to tell people about our life here on MIR, and our problems, but the lives of hams on Earth are also interesting to us, and I hope more hams will take the time to tell us about their QTH and surroundings also,'' he concluded.

Ham radio has served as a convenient ''chat'' medium between the US space shuttle Columbia and the troubled Russian MIR space station in recent days. Last weekend, shuttle Commander Jim Halsell, KC5RNI, had two short, direct 2-meter contacts with Foale aboard MIR. The first ship-to-ship SAREX/MIREX contact happened Saturday, July 5, during a MIR/Columbia ''conjunction'' over the Indian Ocean. The contact lasted less than a minute. A little while later, with both spacecraft over the Pacific Ocean, another 30-45 second contact took place, according to Will Marchant, KC6ROL, of AMSAT. ''The shuttle crew was pretty excited about their contact,'' he said. But the best QSO was yet to come. On Tuesday, July 8, 1900 UTC, Foale contacted W5RRR, which patched him through NASA's communications circuits to the space shuttle, enabling Foale to speak at length with the Columbia crew. During the ten-minute contact, Foale filled in his fellow astronauts about the situation aboard MIR, where a Progress supply rocket had just successfully been docked.

''We'd like to invite you to visit MIR,'' Foale said to the shuttle crew, which respectfully declined. Foale said the arrival of the Progress was ''almost like Christmas.'' He said his personal items still in the damaged Spektr module had been replaced, along with a videocassette player. Foale told Halsell the MIR crew enjoys watching American movies when they have the time. He also told his fellow astronauts aboard the Columbia that he had not had a chance to see any of the pictures from the Mars Pathfinder mission as yet. Foale said the Progress carried tea, coffee, chocolate and even fresh food.

Other Columbia-MIR conjunctions will be possible through the mission but whether another contact is attempted depends on the Columbia and MIR work schedules.

On July 10, Foale told N6CO in another packet message that the crew was ''extremely busy, trying to crawl through all the bags unloaded from Progress.'' Foale said the crew will do a training run on July 15 prior to the space walk to attempt to repair the damage and restore power to the space station. Foale will sit out the space walk in the Soyuz vehicle.

[ANS thanks the ARRL, Philip Chien, KC4YER, Pat Kilroy, WD8LAQ, Frank H. Bauer, KA3HDO, Dave Larsen, N6CO, Matt Bordelon, KC5BTL, and Rosalie White, WA1STO, for their contributions to this bulletin.]

RS-10 AND 16 UPDATES

HR AMSAT NEWS SERVICE BULLETIN 194.04 FROM AMSAT HQ
SILVER SPRING, MD, JULY 13, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-194.04

Here's part of a message just received 10th July '97, from Leonid Labutin, UA3CR, in answer to queries regarding the status of RS-10 and two parameters of the RS-16 telemetry They were Channel 'G' "U of transponder V" and Channel 'F' "U o f stabilizer V".

Leonid Labutin, UA3CR, responded,
"Yesterday I had meeting with Alex Papkov at GCC. We talked about RS-10 and other problems. He thinks there is 1 - 2% of the possibility to restore RS-10. It will be clear after coming back one good expert in GCC from his vacation. Cross fingers....."

"Regarding G and F (of RS-16) TLM, G is Voltage on the transponder in Volts units, F is Voltage on BCR (14->27 V) in Volts units. It used only for scientific experimental equipment installed on the board."

[ANS thanks Leonid Labutin, UA3CR, and Pat Gowen, G3IOR, for this
updated news.]

SB SAT @ AMSAT $ANS-194.05
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 194.05 FROM AMSAT HQ
SILVER SPRING, MD, JULY 13, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-194.05

MIR:
Mike Foale, KB5UAC, has been active on amateur radio.. The radio has
served as a valuable link between Mike and his family and friends during
this crisis . Also activity from the MIR packet station has been reported.
Frequencies with activity have been 145.985 MHz and the 145.200/800 MHz
split.

SAFEX, MIR 70 cm Repeater
(Uplink 435.750 MHz FM, Downlink 437.950 MHz FM,
Subaudible tone 141.3 Hz)
Not operational at this time..

RS-10
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)
RS-10 Still silent.

RS-12
(Uplink 21.21-21.25 MHz CW/SSB, Downlink 29.41-29.45 MHz or
145.91-145.95 MHz CW/SSB)
Operational.
If the activity on RS-12/13 the weekend of 28/29 June, the US-Canadian
Amateur Field Day, was indicative of activity on all satellites, it is
surprising that all space station receivers aren't still de-sensed.
This bird remains active and continues to provide good signals into
eastern North America. The passes will remain somewhat inconvenient
through July for those of us with day jobs, occurring in the late
morning and the very late evening as they do. August will result in
more convenient times during the weekdays."
[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Operational.
WT0N reports that downlink signals are still weak from RS-15,
but the bird is still workable.
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
RS-16's 435.504 MHz beacon is active. Also,
the 29.408 MHz beacon is reported as being heard.

No transponder activity yet.
RS-16 CW Telemetry.
P PSU voltage Volts..... x0.1

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9
MHz CW/USB)
Operational. FO-20 in mode JA continuously.
[ANS thanks Kazu Sakamoto, JJ1WTK, for this report.]

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK.)
KO-23 operating normally.

KO-25
(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM,
9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27
(Uplink 145.85 MHz FM, Downlink:
436.792 MHz FM (As of April 1, 1997)
Operating normally.

This information can be found at www.umbra.com
AO-27 TEPR (Timed Eclipse Power Regulation) States are as follows
As of July 6, 1997

TEPR STATE	Time	TX Status
1	n/a	OFF
2	n/a	OFF
3	---	OFF
4	21	OFF
5	17	ON at Med Power
6	---	OFF

The TEPR States are defined as follows:

Tepr 1, Started when the satellite Enters the Eclipse
Tepr 2, Started at (tepr 1 time) after the satellite enters the eclipse
Tepr 3, Started at (tepr 1 time) + (tepr 2 time) ...

Tepr 4, Started when the satellite enters the Sun
Tepr 5, Started at (tepr 4 time) after the satellite enters the Sun
Tepr 6, Started at (tepr 4) + (tepr 5) ...

You should note that TEPR states 1,2 and 3 happen during the Night Time passes and TEPR states 4,5 and 6 happen during the Day time passes. These occur during EVERY pass, not just over the U.S.A.

The times assigned to the TEPR states are chosen for the health of the satellite over operation convenience. Therefore, during parts of the year the satellite will turn on late or turn off early as seen by ground stations.

Users are reminded that as an FM-mode repeater, AO-27 is subject to FM "capture effect" and can only transmit one signal at a time. Users are asked to cooperate, keep calls short, give breaks so as many stations as possible can work a pass, and above all, listen before and while transmitting. The satellite has a very sensitive receiver, and stations running approximately 25 watts power to moderate-gain omnidirectional antenna can get a good uplink signal into the satellite. A sensitive UHF FM receiver with a preamplifier and an omnidirectional antenna can receive AO-27's downlink with some fading; moderate-gain directional arrays should provide a solid receive signal. Remember to correct for the +/- 9 KHz of Doppler shift on the 436 MHz downlink signal during a pass.
No Doppler correction is needed for the 145.850 MHz uplink signal.

Users are asked not to transmit on 145.85 MHz if they do not hear the satellite's downlink so as to avoid possible interference to other satellite uplinks and downlinks on adjacent frequencies.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update.]

Note I give sources (mostly web links) for each of the items on my link budget. I'm now citing Steve Schindler's article here for the exact MPF downlink frequencies. I had known they were in the X-band deep space allocation, but I didn't know the exact values. They don't really affect the budget figures that much anyway.

I'm still looking for an authoritative source for the downlink antenna gain. A more authoritative figure for the downlink power than "35w nominal" would also be nice.

Phil

2009. Re: radio waves in space

Newsgroup: rec.radio.amateur.space

Source record: 18469

The speed of light in a vacuum is *exactly*

2.99792458 x 10^8 meters/sec

I said "exactly" because the meter is now formally defined in terms
of the speed of light and the second. I.e., if a more precise
measurement of the speed of light and/or the second is made, the
length of the meter will change to fit it.

This change was made some years ago because the speed of light
and the length of the second are among the most accurately known
of all physical constants, thanks to radio/optical measurement
equipment and atomic clocks, respectively.

Phil

Unfortunately, 99.9% of the time, you will not be able to receive the
signals from Pathfinder. You will have to have a large antenna +.

Yes, you are able to receive the signals from NASA if you are lucky...

There are some rumors for the Pathfinder's frequency.

Here are some info that you also see on Usenet:

1. 1.9 GHz rannge
2. 12W 8427.22222 MHz (I doubt...)
3. 12W 8429.938271 MHz (I doubt...)
4. 1W 459.7 from Rover
5. 70m and 12m band
6. http://people.qualcomm.com/karn/

GOOD LUCK

The Volusia County ARES/RACES Page is back up and operational!

The New Address is:
http://www.netpass.com/varecs

This page was down for awhile at an older address. The old address is not operational. If you currently have a link to VARECS at the former address (dbeach.com) please change it to the above (netpass.com). If you have taken down the link please put the new one up at your earliest convience.

Some new features include:
+ Frames
+ Image Maps
+ Music
+ Updated Links
+ The Amateur Radio Ring
+ And Many More Great Improvements

I invite everyone to check out our new page. Please spread this message to any newsgroups, mailing lists, packet BBS or any other meathod you see fit. If you have a or know of any ham radio pages, newsgroups, or any other information, that isn't on our link list please send them to kf4bia@n-jcenter.com. Personal pages are welcome along with skywarn, ares, races, civil defence, and any other ham radio related pages.

Thanks,

2012. Contacting the Mir and Space Shuttle

Newsgroup: rec.radio.amateur.space
Date: 1997-07-13 00:00:00 UTC
From: niel brieger <nbrieger@ix.netcom.com>
Message-ID: <33C98F0A.16C9@ix.netcom.com>
Source record: 18472

I was wondering if anyone could recommend a setup for contacting the Mir, Space Shuttle, and other amateur satellites and entities. I'm currently set up here with a Yaesu that can output 5/20/50 watts on 2m and have a cushcraft ringo in the attic. I'm pretty sure the antenna isn't going to cut it, and a ground plane antenna has been recommended. Is 50 watts going to be enough to contact those sites in space with the correct type of antenna? If anyone has any suggestions or could recommend what works good for them, I'd love to hear what you've done!

73,
Niel Brieger, KC5ZJR

2013. $ LOAN BUSINESS, EASY MONTHLY INCOME, NO BRAINER $

Newsgroup: rec.radio.amateur.space
Date: 1997-07-14 00:00:00 UTC
From: a19@a.a
Message-ID: <33c97be0.0@news.unibe.ch>
Source record: 18377

I have participated in the standard "Please put me on your mailing list" letter and found it to be worth
my time (I get 1 or 2 handfulls or letters every day) but I also found that it's results were nowhere
near what I expected due mainly to people not sending in the money but rather spreading the letter
without paying for it. I participated in that mainly as an experiment and found that there are a
tremendous amount of people willing to do it. I thought about how to, first, eliminate the "non-pay"
problem and, second, to create a monthly income. I came upon the solution and decided to start a new
program. I decided that there were 3 things that this new program needed in order to work for everyone
and they were: 1.) It needed to be very simple and easy for anyone to do, and, 2.) It needed to be
inexpensive enough for even the poorest of people, and, 3.) It needs to be DUPLICATABLE. I think you
will find this program to meet those requirements. I have put lots of thought into it and I ask that you
PLEASE do NOT modify it. This WILL WORK if you follow it. This system is based on the unconditional
"loaning" of money to people. Simply say, "I am loaning you this $2 as an act of goodwill to help you in
your financial need, you may pay me back if and when you can." You should find 5 or more people who will
send $2 to the 5 needy people on this list AND MAINTAIN 5 or more people who will do the same. You
should put your name on postition number 5 and move each of the other names up one position. The name
originally on position number 1 gets removed. You should be able to contact each of your 5 or more
people to see if they are going to be active this month. If not then you need to find one or more people
to be active in order to maintain at least 5. I am not speaking about the 5 people on the list but
rather the 5 new people you have found. I would highly suggest having more than 5 in any given month.
Now I know that this would be extremely easy to do since I can think of at least 20 people myself who
will do this consistently. The key is to maintain at LEAST 5 active people. If you don't then you can't
expect for the rest of the people to do it either and you can't expect for this system to work. This

system is a no-brainer, and if someone can't afford the $10 + stamps for this then they truly ARE in
need! It is OK to use the internet to find people but I think it would be easier to find them through
people that you know. This way it will be easier for you to contact them every month to ask about their
being active, unless someone is willing to give you their e-mail address. Here are some numbers:

Monthly income model per level and total for maintaining 4 active members @ $2 each:

Level 1: $2 x 4 people = $8, Total now $8
Level 2: $2 x 16 people = $32, Total now $8 + $32 = $40
Level 3: $2 x 64 people = $128, Total now $8 + $32 + $128 = $168
Level 4: $2 x 256 people = $512, Total now $8 + $32 + $128 + $512 = $680
Level 5: $2 x 1024 people = $2048, Total now $8 + $32 + $128 + $512 + $2048 = *** $2728 ***

Yearly income: $2728 x 12 months = $32,736

Monthly income model per level and total for maintaining 5 active members @ $2 each:

Level 1: $2 x 5 people = $10, Total now $10
Level 2: $2 x 25 people = $50, Total now $10 + $50 = $60
Level 3: $2 x 125 people = $250, Total now $10 + $50 + $250 = $310
Level 4: $2 x 500 people = $1000, Total now $10 + $50 + $250 + $1000 = $1310
Level 5: $2 x 2500 people = $5000, Total now $10 + $50 + $250 + $1000 + $5000 = *** $6310 ***

Yearly income: $6310 x 12 months = $75,720

Monthly income model per level and total for maintaining 6 active members @ $2 each:

Level 1: $2 x 6 people = $12, Total now $12
Level 2: $2 x 36 people = $72, Total now $12 + $72 = $84
Level 3: $2 x 216 people = $432, Total now $12 + $72 + $432 = $516
Level 4: $2 x 1296 people = $2592, Total now $12 + $72 + $432 + $2592 = $3108
Level 5: $2 x 7776 people = $15552, Total now $12 + $72 + $432 + $2592 + $15552 = *** $18660 ***

Yearly income: $18660 x 12 months = $223,920

Monthly income model per level and total for maintaining 7 active members @ $2 each:

Level 1: $2 x 7 people = $14, Total now $14
Level 2: $2 x 49 people = $98, Total now $14 + $98 = $112
Level 3: $2 x 343 people = $686, Total now $14 + $98 + $686 = $798
Level 4: $2 x 2401 people = $4802, Total now $14 + $98 + $686 + $4802 = $5600
Level 5: $2 x 16807 people = $33614, Total now $14 + $98 + $686 + $4802 + $33614 = ***

$39214 ***

Yearly income: $39214 x 12 months = $470,568

Keep in mind that it does not matter what day of the month that someone chooses to be active. It DOES
matter that they are active on that day EVERY month. The key to this is DUPLICATION! You must treat this
as a business. If you treat it like a hobby that is how it will treat you. You could even organize small
meetings with your people and their prospects and work with your leaders.
Think of how easy this would be for you, how reasonable this is, and of how good the chances are of it
working for you. You may need to hire someone to open all the envelopes.

NOTE: I decided on $2 instead of $1 because it is more feasible and it won't matter much for someone to
send $2 as opposed to $1. Also I was against $5 as that becomes too expensive to duplicate.

Mail $2 every month with a piece of paper saying "I am loaning you this $2 as an act of goodwill to help
you in your financial need, you may pay me back if and when you can" to the following needy people:

2016. $$$ NEW SYSTEM, BETTER THAN "ADD ME TO YOUR MAILING LIST" $$

Newsgroup: rec.radio.amateur.space
Date: 1997-07-14 00:00:00 UTC
From: a4@a.a
Message-ID: <33c9aa4b.0@news.unibe.ch>
Source record: 18380

I have participated in the standard "Please put me on your mailing list" letter and found it to be worth
my time (I get 1 or 2 handfulls or letters every day) but I also found that it's results were nowhere
near what I expected due mainly to people not sending in the money but rather spreading the letter
without paying for it. I participated in that mainly as an experiment and found that there are a
tremendous amount of people willing to do it. I thought about how to, first, eliminate the "non-pay"
problem and, second, to create a monthly income. I came upon the solution and decided to start a new
program. I decided that there were 3 things that this new program needed in order to work for everyone
and they were: 1.) It needed to be very simple and easy for anyone to do, and, 2.) It needed to be
inexpensive enough for even the poorest of people, and, 3.) It needs to be DUPLICATABLE. I think you
will find this program to meet those requirements. I have put lots of thought into it and I ask that you
PLEASE do NOT modify it. This WILL WORK if you follow it. This system is based on the unconditional
"loaning" of money to people. Simply say, "I am loaning you this $2 as an act of goodwill to help you in
your financial need, you may pay me back if and when you can." You should find 5 or more people who will
send $2 to the 5 needy people on this list AND MAINTAIN 5 or more people who will do the same. You
should put your name on postition number 5 and move each of the other names up one position. The name
originally on position number 1 gets removed. You should be able to contact each of your 5 or more
people to see if they are going to be active this month. If not then you need to find one or more people
to be active in order to maintain at least 5. I am not speaking about the 5 people on the list but
rather the 5 new people you have found. I would highly suggest having more than 5 in any given month.
Now I know that this would be extremely easy to do since I can think of at least 20 people myself who
will do this consistently. The key is to maintain at LEAST 5 active people. If you don't then you can't
expect for the rest of the people to do it either and you can't expect for this system to work. This

system is a no-brainer, and if someone can't afford the $10 + stamps for this then they truly ARE in
need! It is OK to use the internet to find people but I think it would be easier to find them through
people that you know. This way it will be easier for you to contact them every month to ask about their
being active, unless someone is willing to give you their e-mail address. Here are some numbers:

Monthly income model per level and total for maintaining 4 active members @ $2 each:

Level 1: $2 x 4 people = $8, Total now $8
Level 2: $2 x 16 people = $32, Total now $8 + $32 = $40
Level 3: $2 x 64 people = $128, Total now $8 + $32 + $128 = $168
Level 4: $2 x 256 people = $512, Total now $8 + $32 + $128 + $512 = $680
Level 5: $2 x 1024 people = $2048, Total now $8 + $32 + $128 + $512 + $2048 = *** $2728 ***

Yearly income: $2728 x 12 months = $32,736

Monthly income model per level and total for maintaining 5 active members @ $2 each:

Level 1: $2 x 5 people = $10, Total now $10
Level 2: $2 x 25 people = $50, Total now $10 + $50 = $60
Level 3: $2 x 125 people = $250, Total now $10 + $50 + $250 = $310
Level 4: $2 x 500 people = $1000, Total now $10 + $50 + $250 + $1000 = $1310
Level 5: $2 x 2500 people = $5000, Total now $10 + $50 + $250 + $1000 + $5000 = *** $6310 ***

Yearly income: $6310 x 12 months = $75,720

Monthly income model per level and total for maintaining 6 active members @ $2 each:

Level 1: $2 x 6 people = $12, Total now $12
Level 2: $2 x 36 people = $72, Total now $12 + $72 = $84
Level 3: $2 x 216 people = $432, Total now $12 + $72 + $432 = $516
Level 4: $2 x 1296 people = $2592, Total now $12 + $72 + $432 + $2592 = $3108
Level 5: $2 x 7776 people = $15552, Total now $12 + $72 + $432 + $2592 + $15552 = *** $18660 ***

Yearly income: $18660 x 12 months = $223,920

Monthly income model per level and total for maintaining 7 active members @ $2 each:

Level 1: $2 x 7 people = $14, Total now $14
Level 2: $2 x 49 people = $98, Total now $14 + $98 = $112
Level 3: $2 x 343 people = $686, Total now $14 + $98 + $686 = $798
Level 4: $2 x 2401 people = $4802, Total now $14 + $98 + $686 + $4802 = $5600
Level 5: $2 x 16807 people = $33614, Total now $14 + $98 + $686 + $4802 + $33614 = ***

$39214 ***

Yearly income: $39214 x 12 months = $470,568

Keep in mind that it does not matter what day of the month that someone chooses to be active. It DOES
matter that they are active on that day EVERY month. The key to this is DUPLICATION! You must treat this
as a business. If you treat it like a hobby that is how it will treat you. You could even organize small
meetings with your people and their prospects and work with your leaders.
Think of how easy this would be for you, how reasonable this is, and of how good the chances are of it
working for you. You may need to hire someone to open all the envelopes.

NOTE: I decided on $2 instead of $1 because it is more feasible and it won't matter much for someone to
send $2 as opposed to $1. Also I was against $5 as that becomes too expensive to duplicate.

Mail $2 every month with a piece of paper saying "I am loaning you this $2 as an act of goodwill to help
you in your financial need, you may pay me back if and when you can" to the following needy people:

2021. Re: Dove

Newsgroup: rec.radio.amateur.space
Date: 1997-07-14 00:00:00 UTC
From: Mike C <anti@spam.net>
Message-ID: <33CA6962.5AFF@spam.net>
Source record: 18385

Geoff Clark wrote:

> Has anyone heard from Dove recently? I have heard nothing for the last
> couple of weekends. Amy clues?

The ANS-31 WEEKLY BULLETIN from back on May 11, 1997 stated:

DO-17(DOVE)
(Downlink 145.825 MHz FM, 1200 Baud AFSK.
Beacon 2401.220 MHz.)
DOVE apparently crashed late last week (about April 24). Cause of crash
is
unknown at this time. WJ9F turned on the S-band transmitter about May 1
0500U and has started the reload process.
.[ANS thanks Jim white, WD0E, DO-17 Command Team, for this news.]

The latest BULLETIN (number 194) states that no DOVE report is
available.

Anyone have more clues?

Thanks,
Mike

Your set-up is just fine. Patients is the key here. After 2 years of
trying to make a voice contact with Mir this past January I had a QSO with
John Blaha on Mir. Thrilled doesn't even describe how great it was! With the
Ringo (that's what I have) you basically have 2 chances during a pass, from
the horizon to about 35-40 degrees up. So at the beginning of the pass and at
the end of a pass are your best chances. About 40 degrees they won't hear you.
My contact was about 15 degrees at the time. Just keep trying and don't give
up or get discouraged! you'll do it eventually!

Good luck,

Tom

(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
```

use the satellite if the beacon frequency wavers, or if downlink signals chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

* Radio Sport-10's beacon, ROBOT and transponder remain silent. Bad news to report regarding the satellite:

Leonid Labutin, UA3CR, responded,
"Yesterday I had meeting with Alex Papkov at GCC. We talked about RS-10 and other problems. He thinks there is 1 - 2% of the possibility to restore RS-10. It will be clear after coming back one good expert in GCC from his vacation. Cross fingers....."

Still no firm information as to what is wrong with the bird and why the problem occured. Let's pray that this report was a 'bad translation' from Russian to English.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite. Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w erp is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

* Radio Sport-16 currently has its Mode A transponder turned off. Andy Mirinov RK3KPK reports that RS-16 "now has a new voice on CW". All beacon reports received by Andy of this latest Russian satellite will be answered by him with a QSL card.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

The latest FO-29 Schedule.
July 11 (Fri) 09:51z JD1200
July 18 (Fri) 00:20z JD9600
July 25 (Fri) 09:23z JA
Aug 1 (Fri) 08:17z JD1200

Sept 26 (Fri) 08:09z JA

* Mir Simplex - Astronaut Mike Foale has been making the odd contact with radio amateurs on 2M. Both 145.800 down 0.600 split and the 145.985 simplex have been used.

* Mir SAFEX Repeater - Not operational at this time.

* SAREX Mission STS-94 Nominal orbital data is now available on the AMSAT Web Page. The time-independent State Vector and the Keplerian elements corresponding to the scheduled launch time of 01-JUL-97 / 18:37 UTC are available at:

http://www.amsat.org/amsat/sarex/orbit.html

CREW MEMBERS with Amateur Radio call signs:
James D. Halsell, Commander, KC5RNI
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

The following STS-94 SAREX summary information was obtained from several sources at NASA, the ARRL, and AMSAT including portions of AMSAT News Service bulletin numbers $ANS-166.02 and $ANS-159.02.

During SAREX missions, the astronauts will typically make scheduled radio contacts with schools, random radio contacts with the Amateur Radio community and personal contacts with their families.

Seventeen schools, including one in the People's Republic of China, are scheduled to talk with the astronauts. During the earlier mission, Columbia's premature return to Earth on April 8 posponed all scheduled SAREX QSOs. Most of the schools on the earlier schedule remain on tap for the July mission, which will again carry the microgravity science lab. Three hams are among the STS-94 crew members.

Under the SAREX program, students at each of the selected schools ask questions of the astronauts during the contact. The primary goal of SAREX is to excite students' interest in science, math, technology and the U.S. space program.

STS-94 is a long duration shuttle flight where crew members will work in shifts around the clock. Shift team members are as follows:

RED TEAM
Commander (CDR): Jim Halsell, KC5RNI
Pilot (PLT): Susan Still
Mission Specialist (MS3): Donald Thomas, KC5FVF
Payload Specialist (PS2): Greg Linteris

BLUE TEAM
Mission Specialist (MS1): Janice Voss, KC5BTK
Mission Specialist (MS2): Michael Gernhardt
Payload Specialist (PS1): Roger Crouch

The SAREX Working Group has designated the following frequencies during the STS-94 mission.

FM Voice Downlink: (Worldwide) 145.55 MHz FM
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz***
FM Packet Uplink: 144.49 MHz***

***If packet is on the air.

CONFIGURATION: Officially, the SAREX hardware is flying in Configuration B. SAREX Configuration B is voice only, battery operation. The SAREX equipment on-board STS-94 includes the Motorola 2-meter FM hand-held transceiver, 15 spare batteries, the window antenna, SAREX headset assembly, personal recorder and the required interconnecting cables. Since STS-94 is an extended duration flight with power hungry primary experiments, the power allocated for SAREX is zero watts. The SAREX team is also flying the Heathkit Packet Radio TNC for potential use later in the flight. In the event that power conservation measures are successful, the mission control team will advise SAREX and the astronauts to initiate use of the Packet Radio system which also includes one of the shuttle laptop computers or PGSCs.

Please stay tuned to these SAREX Working Group bulletins and
sarex@amsat.org during the mission for late breaking news regarding
packet operation.

CALL SIGNS:
FM voice call signs: KC5RNI, KC5BTK and KC5FVF
FM packet call sign: W5RRR-1 (If turned on during the flight)

Hams should avoid transmitting on the shuttle's downlink frequencies.
The crew will not favor any uplink frequency, so your ability to
communicate with SAREX will be the "luck of the draw." Transmit only
when the shuttle is within range of your station, and when the shuttle
station is on-the-air.

The crew is using separate receive and transmit frequencies. PLEASE do
not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your
receiving frequency. The UPLINK is your transmitting frequency.

QSL VIA: Send reports and QSLs to ARRL EAD, STS-94 QSL, 225 Main Street,
Newington, CT 06111-1494, USA. Include the following information in
your QSL or report: STS-94, date and time in UTC, frequency and mode
(FM; voice or packet). In addition, you must also include a SASE using
a large, business-sized envelope if you wish to receive a card.

STS-94 is the 23rd flight of Columbia and the 85th mission
flown since the start of the Space Shuttle program in April 1981.

[Radio amateurs are encouraged to relay these SAREX bulletins to
their local packet BBS as long as the Bulletin IDentification (BID)
is preserved. The BID is the character string beginning with the
dollar sign ($), for example as in "SB SAREX @ AMSAT $STS-94.001"
without the quotation marks.]

This FAQ is being updated and re-released on a weekly basis on
or about Monday. Any constructive suggestions are always welcome.

hello:
I'm new to packet and I'd like to get into MIR comms and I have a few
questions.
#1- Previous info I have indicates that MIR operates simplex on 145.55.
Is it still an active freq?

#2- Is there a new packet (simplex?) channel on 145.985?

#3- What is the MIR callsign?

thanx and 73 de KB2SGJ

Isn't it a little strange to give out that info as some "lunie" may jam?

No, just a reminder that the Internet is going straight down the friggin'
toilet. That's what happens when a technology goes commercial.

Call me an old fashioned 23 year old but I don't remember anything like
this junk on FidoNet or the good old BBS'es. Also, the boys at CERN are
certainly happy about which direction their "world wide web" is heading.

Cheers,
KF4PTH

At the main menu go to F6 and you can change things how many and which
sats you want it to track from there. The documentation is pretty well done,
you may want to consult it.

Space Bulletin 025 ARLS025
From ARRL Headquarters
Newington, CT July 15, 1997
To all radio amateurs

SB SPACE ARL ARLS025
ARLS025 Shuttle contacts PRC

It didn't come off without a hitch, but the crew aboard the shuttle Columbia during mission STS-94 in July nonetheless managed a first for the Shuttle Amateur Radio EXperiment (SAREX) program. On Monday, July 14, the shuttle crew spoke with students at Tsinghua University. The contact was via a telebridge link with Gordon Williams, VK6IU, in Western Australia. The successful QSO marked the first SAREX contact with a school in the People's Republic of China.

On the first scheduled orbit for the Tsinghua University contact, the designated crew member, Payload Specialist Roger Crouch, was busy with primary mission duties. The SAREX ground team stayed up late and managed a successful QSO on the following orbit. There were 30 people in the Tsinghua University audience, along with Chinese television, Chinese government officials, and some Chinese IARU representatives. David Chang, BY1QH, coordinated the contact at the university's end. Despite some rough copy, the contact went ''very well'' with 10 questions asked and answered, according to SAREX Principal Investigator Matt Bordelon, KC5BTL.

The Chinese contact was one of 17 scheduled SAREX QSOs the STS-94 crew members completed during their 16-day mission. Overall, ham radio had a very prominent role in the mission, which not only completed all of the scheduled SAREX contacts with school groups but made numerous random QSOs with earthbound hams. Aboard the shuttle were Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF, who set up the orbiting ham shack and completed 19 random contacts before the ''official'' scheduled test pass. Toward the end of the mission, the Columbia crew averaged three dozen or so random voice contacts per day during the 16-day mission. The packet robot was activated nine days into the mission.

The other SAREX schools on mission STS-94 were: Alvin C. York Agricultural Institute, Jamestown, Tennessee; Center Street School, El Segundo, California; Crittenden Middle School, Mountain View, California; Discovery Place Inc, Charlotte, North Carolina; Du Bois Middle School, Du Bois, Pennsylvania; Dunn's Corners Elementary School, Westerly, Rhode Island; Edgewater High School, Orlando, Florida; Foursquare Radio Amateur Youth, Oxnard, California; Ione Junior High School, Jackson, California; Lawrence Intermediate School, Lawrenceville, New Jersey; Lexington Traditional Magnet School, Lexington, Kentucky; Mountain View Elementary School, Prescott Valley, Arizona; Public School No 9, New York, New York; Robert J. Burch Elementary School, Tyrone, Georgia; S.J. Davis Middle School, San Antonio, Texas; and Yeso Elementary School, Artesia, New Mexico.

STS-94 marked the 24th SAREX mission. The mission--a ''refly'' of the aborted STS-83 mission in April--carried the same crew members and the microgravity science lab payload. The Columbia crew will stow the SAREX equipment on July 16.

Source record: 18397

I plan to mount two M2 Oscar Antennas on a 4' Glen Martin Roof Tower.

The tower is 4' high and I plan to use a split Yeasu G5400B Az/El rotor. How tall should the mast be? The turing radius of the antennas is 6'. If the mask extends 5' above the tower will the metal in the tower affect the antenna pattern? Should the mask be taller?

73,
N5KDY

Introducing the Hottest Breakthrough in Network Marketing History!

Bottom line/smallprint: NO minimum purchase required . Zero.
Only an annual fee of $29.95 and your chance to save and earn BIG money.

We are the first company to combine the Hottest Products of the 20th Century, the Hottest Telecommunication Services available, 1000's of Name Brand Products you buy everyday, and the Best Pay-Plan in the Industry!

Products will be presented in 3 formats:

1. In a state-of-the-art Internet Mall
2. In printed catalogs that you can hand out or mail out
3. In a beautiful CD-ROM that you can hand out or mail out

If you want you may go directly to this web page :

http://www.romegeorgia.com/cgi-bin/mfgdir/index.cgi?CH0667

Or,

For all the hottest details on this once in a lifetime opportunity, reply to ICTC@nhi.no with "More Info" in the subject field, and the information will be sent to you ASAP!

Or read on here :

Does this sound too good to be true??? Well, it's true, and here's why:

We are working closely with the following businesses to bring you all the greatest products of the nation through the convenience of Home Shopping!

1. One of the Largest Wholesale Clubs in the Nation, bringing you 1000's of products you are currently buying and using every day!

2. Sysco Foods, the Nation's Largest Food/Household products supplier for Supermarkets, Grocery Stores, Hotels/Motels, and Restaurants!

3. Suppliers of "As Seen On TV" products, 25,000+ Name Brand Foods Items, Nutritionals, Weight Loss products, 175,000 Music CDs, Sharp, Panasonic, Southwestern Bell, Quasar, Timex, Seiko, Black & Decker, KTool, Sunbeam, Mikasa, Corning, Char-Broil, Bush Furniture, Braun, Vidal Sassoon, Gifts, Jewelry, Fragrances, and the list keeps growing!

4. A $100 Million Telecommunications company bringing you the
HOTTEST High-Tech products available ANYWHERE! Plus all the services
you use everyday at prices that will save you money just by using
them!

9.9 cpm Long Distance Service
$9.95 Unlimited Internet Service
Virtual Home/Office System
Free Calling Cards

Combined all this with the Hottest Sponsoring System available online
and your success is bound to be unbelievable! FREE Webpages to use
when sponsoring others, Weekly Updates to keep you informed, Rep
Support Center to have all your questions answered DAILY, and much,
much more!

See this webpage for more info :

http://www.romegeorgia.com/cgi-bin/mfgdir/index.cgi?CH0667

For all the hottest details on this once in a lifetime opportunity,
reply to ICTC@nhi.no with "More Info" in the subject field,
and the information will be sent to you ASAP!

As an added bonus, just for reading this advertisement, reply to
ICTC@nhi.no with "Newsletters" in the subject field and I
will send you 2 POWERFUL Newsletters just for replying to this
message!

My guess is that ke4zv@bellsouth.net - AKA Gary Coffman or the folks at
w1aw@arrl.org can provide or more detailed answer, so please repost or
e-mail if this doesn't answer properly.

First things first, and those things would be that you cannot deal with support
effects totally in an az/el environment, unless you use very strong,
non-conductive support elements.

The second thing would be that most antennas don't have sufficiently narrow
forward lobes that an out of plane support structure effects the ability
to make satellite contact.

The third thing would be the practical advice, and that is that you really,
really need to make sure that however you position your antennas, that you
get good balance (meaning that with clamps loose, both elevation and
azimuth) so that it takes no more than a slight finger press to move the
array in any direction.

The last, which should be obvious, is make absolutely sure that no
combination of elevation or rotation will foul any part of your installation
or any other current or growing object.

Summary is that anything that can be pointed effectively by the Yeasu
5400 should focus on non-fouling installation, good balance in both planes,
and a reasonable idea of which way is 0 degrees North. Good downlink
pre-amps is a strong recommendation. Big ears will get you places faster
than a big mouth will.

I've seen reports this week that RS10 may be recoverable, but the estimate
for recovery was fairly small. Let's hope the estimate was wrong; it would
be great to have it back.

As far as RS16 goes, I've read that the beacon is on, but operation hasn't
started yet. Fingers crossed there too.

Just in case you don't know, AMSAT has a site that gives reasonably up
to date info. http://www.amsat.org to see the big picture. For recent news
try http://www.amsat.org/amsat/news.html

No. Mir now operates on a split frequency of 145.200 downlink, 145.800
uplink.

>#2- Is there a new packet (simplex?) channel on 145.985?

This was an experimental frequency at the end of June, but they still have
the option of using it over the US

>#3- What is the MIR callsign?

Call is R0MIR-1

Remeber to disconnect before they go over the horizon! If you don't, it
ties up the packet system until it retries out, preventing others from
being able to connect. You only have about 9-12 minutes.....

>suggestions or could recommend what works good for them, I'd love
>to hear what you've done!
>
>

I have successfully contacted Mir with 100 watts and a 1/4 mag mount on my car, so 50 watts into a Ringo Ranger should be plenty. Remember that you have a lot of competition, though, so any edge you can give yourself, you should. An overhead-pattern antenna such as a turnstile or M2 Eggbeater would help (I've also used both of these), and of course, a computer-aimed beam with azimuth and elevation would be best. Turnstiles are cheap and fairly easy to build. Check the ARRL handbook for plans, or get a copy of The Satellite Experimenter's Handbook thru inter-library loan.

TIP: Remember that Mir operates on Moscow time, so the best times to catch them are passes between about 0100 and 1300 UTC or so.......

Finally, I have heard of people successfully working Mir and the shuttle with HT's and 5/8 wave mag mounts, just when there was no one else on the air.

Go for it!!!

>(in Virginia)

Chris there is no comparision between sound and radio/light waves.

Sound is a a compaction and rarifacation of air at a discrete number of times per second. This is termed the frequency of the audio wave we hear. And so what we are hearing is a movement of air.

Radio waves termed "electromagnetic waves" are discrete physical "things" that do not depend upon any medium for transmission.

In simple terms a radio wave is made up of electromagnetic and electrostatic fields that are generated by the flow of current along an antenna. And as such - as mentioned above - does not require anything like air for transmission from one place to another. Plain old empty space works just fine.

Light waves travel in a similar way. The are however at a much higher frequency than "Radio Waves". Light waves (wave length) that can affect the sense of sight lie between .000004 cm and .000007 cm. Compare this wavelength to 160 or the 89 meter band.

Light is produced by heat - the heating of a body until it emits light waves. The temperature and surface of the body dictate the frequency or color of the light.

Hope this helps.

Jim/AC4CZ

Dear Thinker,

I would have to question your name. I see no thinking so far.

Do you suppose that the reason you are not receiving the information
you ask for is because of the question you asked?

There are many books written on antennas describing in great detail
the various kinds of antennas and their particular uses.

Why haven't you read any?

If you had taken the time to read a little you would not be asking
such childish quesstions.

Hello everybody.
My name is Andre, and my call is CT2GEU. I would like to make an antenna to work the 17 meters band, because my working conditions are only a rusty dipole. I have some material from an old 10m vertical. Please, if you can, send me all the information about sizes, traps, and radials, or even better, a draw of scheme.
Thanks very much, everybody.

The main beef I have with Logsat (V. 5.1.15) is that it gives me the hourglass periodically while it updates. It does this while minimized as well as in foreground. That means that it interrupts other programs while updating. Not a well behaved Windows program. I'm running a 166 Mhz P6.0 with all fast peripherals. I keep 6 or more ortho maps up on the Logsat screen. I do appreciate the time-to-aquire and visible time info.

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up satellite schedules to contact hams all over the world.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

Greetings! I need writers to contribute fun, interesting, cool and exciting articles for our new ham radio publication called "On The Air! excellent adventures in ham radio". If you enjoy writing about such topics as VHF, DX, building stuff, antennae, fox hunting, packet or atv, or any other related subject, please email me for our writers' guidelines. We want you to join in the fun!

On The Air! is a magazine that does not contain any stuffy, boring, pedantic, predictable, or gruesomely dull copy. Picture Wired magazine. Picture a ham radio version of it. That's On The AIr! If you like, you can send $4.00 for a sample copy. Mail to

Please don't think I'm a nut.

My brother-in-law, who professes alternately to be a libertarian or a flat-earther, saw some stupid video that has him convinced the moon landings didn't happen.

The problem with that particular conspiracy is that there are witnesses. Aren't there?

Are there any radio buffs who witnessed the moon landings? That is, anyone who listened in real-time to Houston and Tranquility Base talking back and forth?

And if there are, is it possible to spoof radio transmissions to and from the moon? Could NASA, for instance, bounce the audio and video off a satellite in such a manner that nobody on Earth would be the wiser? (Actually, in such a way that everybody on Earth wouldn't notice.)

TIA

If you're really looking for comprehensive antenna info get yourself one
of the latest copies of the ARRL Antenna Book. It is a terrific resource
for all types of antennas for all types of frequencies. You could probably
mail order one directly from them in Newington Connecticut. There are just
too many options to respond via e-mail (it's a huge manual!). Good luck.

Hi gang:

Great news! We have two new Web Sites for you to check out. The
first, The KB8TNQ Ultimate Amateur Radio Page! is a great source for
all kinds of information on the Amateur Radio hobby. It's been up since
11 May, 1997 and is generating some great feedback.

The other, The Central Michigan Amateur Radio Club Web Site is mainly
about our club and it's activities, but we have added a FREE "Trader's
Page". If you have some ham gear or computer items to sell, this is the
place to be. With posts all over the internet, this site will soon be
our most popular, so come on in and give us a look!

7-3,
Jim (KB8TNQ)

2076. Re: Nova vs Logsat

Newsgroup: rec.radio.amateur.space
Date: 1997-07-21 00:00:00 UTC
From: Stephanie Steele <kc7dba@primenet.com>
Message-ID: <33D37EA7.7E15@primenet.com>
Source record: 18340

I have found Nova to be clumsy and non-intuitive in many aspects. It does offer planet tracking however but I just don't like it's interface. I am sorry I bought it.

I prefer LogSat and the current release is 5.2 which just went gold and is available on CD Rom. The other feature of LogSat is that if you write and tell the author of your suggestions and ideas he is very fast to integrate them into the product and very nice to work with. He does not work satellites himself so he is always anxious to hear what those of us who do want. I am sure he would welcome your feedback on his product as far as "behavior" goes also.

I've tried quite a few programs, and the definite winner is LogSat Professional. The new version that was just released is awesome. The maps look great, you have to see them to believe them. It's filled with features, and is extremely easy to use. If you're interested in satellites, it's THE program to use.

Contact AA2LN via e-mail at aa2ln@juno.com and tell him you would like a
copy of the plans for the so-called "half square" antenna. Lots of
people have used it and swear by it. Basically, its a feed point as
high as you can get it with a 1/2 wave hanging straight down from it,
and another 1/4 wave going straight out horizonal and from the end of
that a 1/4 wave hanging straight down again. Sounds worse than it is.
Said to have good directivity and low angle of radiation.
73 & good luck
Bob

SpaceNews
=========

MONDAY JULY 21, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* MARS PATHFINDER NEWS *
========================
The Orbital Report On-Line newsletter reports that NASA's $271-million
Mars Pathfinder mission is successful beyond expectations. The 325-kg JPL
built probe performed hard-landing in the Ares Vallis region, by 19.33 deg N
33.55 deg E, at 16:56 UTC on 04-Jul-97. The airbag-protected spacecraft
hit the ground at a velocity of some 18 m/s (62 g on impact). It bounced
some 15 times and rolled over about 1 km before stopping. The $25-million
Sojourner rover was deployed on ramps provided by Spar Aerospace on 06-Jul-97
and began exploring the neighborhood of the probe at a speed of about 1 cm/s.
Initially planned to perform for one week, the rover is now expected to be
operational for about one month. The 9-kg Sojourner rover was developed on
behalf of NASA's Office of Advanced Concepts & Technology as Microrover
Flight Experiment (MFEX) to test microrover performance on unknown planetary
surfaces. Similar rovers may fly on future US planetary missions as well
as on Japan's MUSES-C mission to asteroid 4660 Nereus.

* UoSAT-OSCAR-22 NEWS *
=======================
UO-22 (UoSAT-5) was scheduled to be reloaded last Wednesday morning during
the first few passes over Surrey. This reload was necessary to allow
incorporation of a number of new features into the spacecraft flight
software. While most amateur operators will probably not notice the
improvements in terms of the communication performance, there is a
performance gain for housekeeping systems. One area that may be
noticable is a small improvement in uplink speed (especially for
large files) as the checksum is now performed on the fly instead
of on completion of the upload.

A new attitude control task is also being tested and ADCS experiments
will continue for the next week or so. This will not effect the

spacecraft store and forward communications.

* MIR NEWS *
============
For the 2nd weekend in a row, the MIREX team completed another successful family phone patch for Mike Foale on Mir to this parents in the UK. The first patch took place via Miles Mann, WF1F on Saturday July 5, and lasted for 9 minutes. The second patch took place on Saturday July 12 and lasted for over 15 minutes. Dave Larsen, N6CO started the patch from his QTH in California. That patch lasted for over 6 minutes. Then Mike was handed off to Miles in Boston, who continued the patch to the UK.

Mike got an additional 9 minutes of family time during the same pass. Signal quality from Mir was great. The phone audio patch quality was also good. Mike and his parents did not have any problems understanding each other. Mike Foale later thanked Dave Larsen for the phone patch by sending a packet radio message via the Mir personal message system:

* NEWS FROM INFOESPACE *
========================
The french translation of SpaceNews, InfoEspace, is now available over the World Wide Web. Mike, VE2TRV, the translator, and Pat VE2NEN have set up a substantial Web site for their club, Laval Laurentides ARC, and InfoEspace is included on one of its many pages. The URL is:

http://pages.infinit.net/ve2crl/

To access InfoEspace, click on the Radio Cafe icon in the main window (you may have to scroll down a bit), then look for and click on the InfoEspace/

SpaceNews icon (a picture of Mir). InfoEspace may either be read directly on-site, or may be downloaded by clicking on the indicated hyperlink. There are direct links to SpaceNews and to the WWW addresses featured in the latest edition of SpaceNews. InfoEspace may also be directly accessed at:

http://pages.infinit.net/ve2crl/space.htm

Mike encourages anyone who downloads InfoEspace and has access to the packet network to freely spread it around. The bulletin header, including BID, and the packet message terminator are included in the text.

[Info via Mike VE2TRV and Pat VE2NEN]

* OSCAR-11 NEWS *
==========
It has been an uneventful month for OSCAR-11. During the period 20-June to 17-July, excellent signals have once again been received from the 145.826 MHz beacon. The improved signals may be partly due to increased power output resulting from lower beacon temperatures. In the UK, the change to Summer time, and the lighter mornings make the early morning passes more socially acceptable. There is less electrical interference and splatter from mobile radios in the early mornings than in the afternoons.

The Mode-S beacon has been heard by Dean, AL7CR in Anchorage, Alaska, and by Joe K0VTY, located near Omaha, Nebraska. Joe used a 60 cm dish and a Down East Microwave converter working into a Kenwood TR-781 with a Time Wave DSP-9 filter. Thanks Dean & Joe.

Telemetry is reported to be nominal. The battery voltage is generally around 14 volts. The internal temperatures reached minumum values (battery -0.4C telemetry electronics -1.6 C), and have now started to rise. The minimum value of solar illumination was about 72% of full sunlight. Temperatures should now increase, as the solar illumination reaches a peak of about 97% in October.

Two WOD surveys of channels 10, 20, 30, 40 (+Y, -X, +X array currents, array voltage) dated 07-June, and 25 June respectively, have been transmitted.

A single AMSAT-UK bulletin by Richard G3RWL has been uploaded. This featured Sputnik-1 40th anniversary, MIR frequencies, and RS-10 news. Bulletins always include current Keplerian elements for OSCAR-11, and often Keps for satellites featured in the bulletin.

Richard always welcomes short news items for inclusion in the OSCAR-11 bulletin. His e-mail address is g3rwl@amsat.org.

The operating schedule remains unchanged:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)

ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted,
and between ASCII TLM and WOD.

The Mode-S beacon is ON transmitting an unmodulated carrier, but telemetry
indicates that it has partially failed, and delivering half power. Any
reports of reception on 2401 MHz would be most welcome, and should be
directed to Clive Wallis at: g3cwv@amsat.org.

The 435.025 MHz beacon is normally OFF. However it can sometimes be heard
when the satellite is being commanded by ground control, ie. within range
of Guildford, UK. When the 435 MHz beacon is transmitting, the 145 MHz
beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit Clive Wallis' OSCAR-11 Web site.
It contains some software for capturing data, and decoding ASCII telemetry
and WOD. There is an archive of raw data (mainly WOD) for analysis, which
is continually being expanded, as new data is captured. The URL is:

http://www.users.zetnet.co.uk/clivew/

* PB/PG FOR LINUX RELEASED *
============================
Bent Bagger, OZ6BL, and Peter Scott Bentsen, OZ2ABA, have released version
1.0 of PB and PG for Linux. PB and PG for Linux are programs used for
uploading and downloading files to and from digital communication
satellites (Pacsats) that support the FTL0 communications protocol,
allowing users to directly communicate with the Microsat series of
satellites under Linux. PB and PG are based on earlier efforts by
John Melton and Jonathan Naylor who authored XPB and XPG for execution
under the X-Window System, but instead, provide a curses (ncurses)
based user interface, and feature automatic directory fill requests
along with simple, rules based file download requests. XPB and XPG
were, in turn, based on earlier work by Jeff Ward who authored the
original PB and PG programs for DOS.

The current versions of PB and PG for Linux function with Linux kernel
revisions 2.0.24 or higher, and utilize the AX.25 networking capabilities
contained within the Linux operating system kernel. Since Linux is a
multi-tasking operating system, it is possible to run both PB and PG
simultaneously on different virtual consoles to accomplish the tasks
of simultaneously uploading and downloading files to and from Microsat
satellites.

PB and PG for Linux are covered under the GPL (General Public License),
and are available free of charge. A single compressed archive of both
programs (pb-pg-1.0.oz6bl.tar.gz) may be downloaded via anonymous
FTP at sunsite.unc.edu from the /pub/Linux/apps/ham subdirectory.

I think I goofed - the horizontal portion is 1/2 wave. I.e., the total length of wire needed is about a full wavelength. I'm told this design is very scalable - i.e., it can be built for almost any band.
Bob

2083. SASI Sat Tracker Web site??

Newsgroup: rec.radio.amateur.space

Hello all,

I'm in the process of setting up my satellite station and already
own an Yaesu FT-736R. I have an opportunity to buy an
ICOM IC-970A and was wondering if it offers any specific
advanatages over the FT-736R for satellite work? I'm
aware of the frequency capabilities of each radio and the extra
cost of the IC-970, but don't know which would be better for
LEO and OSCAR work.

Any comments would be appreciated. Thanks.

Hello Roman,

I had my first QSO on AO-27 this past Saturday using an armstrong Az-El technique!

The bird is active whenever it is in sunlight, it is off when it is in darkness. Point your browser to:

http://www.umbra.com/sats/

It tells you all about the sat and it's schedule (thanks to Michael Wyrick, N4USI, the control operator of AO-27).

Have fun and 73,

with "subscribe" or "unsubscribe" in the message body.

3. What is the purpose of this list?

The purpose of this list is to share information
and ideas regarding amateur radio astronomy.

4. Who is welcome here?

Amateur and professional astronomers.

Who isn't welcome here? Flamers and those who take joy
in putting down other people. 99% of being a professional
is in your attitude. I will not hesitate to nuke from the
list those who consistently display an un-professional attitude.

5. What topics are welcome here?

If it pertains to radio astronomy it is welcome
here. A small sample of such topics would include:

Telescope construction methods.

Schematics for pre-amp and A/D circuits.

Exchange of observational data and collaborative observations.

You get the idea.

6. A final request.

As a favor to the other list subscribers, once you have subscribed, please send a short bio to the list detailing items such as your current radio telescope setup and special observing interests, if any.

That's all folks! Once again, if you have any trouble, send mail to dtillman@cannonexpress.com.

Please do not post something irrelevant.

CW software has nothing to do with Space Communications. You may want
to post your article in: rec.radio.amateur, rec.radio.amateur.misc

2094. AO-27 is NOT a packet satellite

Newsgroup: rec.radio.amateur.space
Date: 1997-07-22 00:00:00 UTC
From: <>
Message-ID: <970622094640.tvr@mocha.ecofe.com>
Source record: 18358
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.digital.misc

Someone is trying to send FM packet over AO-27 or operating locally in the space sub-band (145.80-146.00). Please don't do that. It is for voice, not packet. Also, please do not transmit until you can hear the downlink. It has a very sensitive receiver, and in the 'States, there is almost always someone on. If you can't hear it (around here at least), then you will almost you will interfere with others operating there, as you won't know when to transmit. Good luck and hope to hear you on AO-27 (and especially from those of you east of the Mississippi).

-- KD6PAG (networking old-timer, RF newbie)

P.S. I run both satellite mobile and packet portable, and will post the callsign of the station if it doesn't end soon.

I'm not a flat earther,and I believe we have been to the moon, but faking
the transmissions would be pretty easy. The rest of the stuff would be more
diffucult.

Joe

Hello Mike,
many thanks for info. The reason why I couldn t hear AO-27 at some passes is
that it is ON 17 minutes after entering sunlight.

73, Roman (DL2SFE)

From: "Shyam Goenka" <sgoenka@hotmail.com>
Subject: A pictorial biography of King Birendra .... the beloved monarch of the land of Buddha
Date: Thu Jul 24 01:26:21 1997
Dear Sir ,

It gives us immense pleasure in enlightening your goodselves of our having published a "A Pictorial Biography of King Birendra" the beloved monarch of Nepal. The publication assumes historical significance in the light of this having commemorated the Silver Jubilee of His Majesty's Accession.

The endeavour of the Editors of this book, which has been a long drawn effort, was to reveal to the world the true profile of a "beloved monarch" and open doors to a nation that is blessed with peace, harmony and goodwill towards all. Through the King's eyes and through the eyes of his people, we have tried to paint a composite, memorable picture of Nepal. Nepal, the country of Mount Everest - The Summit of the world; Lumbini - the birth place of Lord Buddha. 'The Apostle of peace'; 'Pashupatinath' - the sacred shrine of the Hindus; the mountains, rivers, lakes, glaciers, valleys, temples, chaityas, stupas, monasteries and hundreds of landmarks in diversity spelling the rich cultural heritage, has always been beckoning the scholars, researchers, philanthropists, the nature lovers et at from all over the world from time immemorial. This effort presents a true picture of Nepal in nutshell.

The publication has globally been acclaimed as the best produced Pictorial Biography on a Head of State hitherto. It is a worthy souvenir from Nepal, the beautiful country.

We invite you to visit our website on the internet at http://www.webnepal.com/biography and if you please, you may opt to fill in the order form there and advise. We also welcome your valuable comments for improvements in our future endeavours.

Thanking you and assuring you of our best attention at all times.

We remain.

Yours Truly,
For Trans Asian Media Pvt. Ltd.

Look at the picture of K2RIW in the ARRL antenna book. He was also
on the cover of QST in the Appollo years. His portable dish antenna
and 2 gig downconverter followed the lunar modules throughout much
of their space trajectory. Lots of guys stood next to the radio
and heard the conversations from space. If that was all faked by a
satellite, he would have lost signal after a few minutes, but he was
not moving his antenna much. To actually fake the whole moon
landing would have cost more than actually doing it. Very silly.

> LEO and OSCAR work.

Sandy:
I have owned a FT 736 and changed to a 970 H because I was VERY disappointed with the yaesu unit.
The ICOM is very much better in numerous fiels (quality, 70cm rx sensitivity, space for auxiliary units, user interface especially for satellite work, audio etc.) however: it costs almost double the price of an FT736.
If you can buy a 970 at a reasonable price, than you should do it. At the normal list price it would be too expensive.
You should be aware that the FT736 has such a good list price that it is definitely the market leader in satellite rigs.
(Beware of its technical manual: I found that the schematics do have several deviations from reality.)
Hope this helps.

Francisco Costa, CT1EAT, downloaded the following message from Mike Foale
on the Mir space station:

Stat : PR
Posted : 07/21/97 10:13
To : ALL
From : R0MIR
@ BBS :
BID :
Subject: status

I am having frequent power problems with tnc, and loosing all msgs.
Sorry. No supply store is near at hand. I would do anything for a 9pin
9pin serial adapter. Getting ready for next crew, August 7th. Mike.
kb5uac.

Claudio Ariotti, IK1SLD, downloaded the following message from Mike Foale
via the Mir Personal Message System:

Stat : PR
Posted : 07/25/97 09:53
To : ALL
From : R0MIR
@ BBS :
BID :
Subject: Mir status

Lost power to tnc again - lost all messages. Possibly will get new
tnc, with memory protection, in August, with next crew. We are doing
experiments, especially Vassily and Sasha, even though they now have

very little time leiroda and Krisctal still without power, but a little drier now, though still dark. I planted the first ever space produced seeds, two days ago, in Greenhouse. No sprouts yet.
Mike. kb5uac.

Other messages captured by Claudio may be found at the following URL:

http://www.geocities.com/~ik1sld/mirmsg_frame.htm

In other news, a serious problem with de-sensing of the 2-meter receiver exists on the Mir space station, and this has caused frustration on the part of the cosmonauts, groundstations, and the MIREX team. Mir is using multiple commercial VHF channels to send voice and data down to earth based tracking stations around the world. One of the commercial VHF transmitters operating on 143 MHz is de-sensing the 2-meter Amateur Radio Station. Because of the de-sensing problem, the 2-meter station is OFF the air or unable to copy groundstation signals most of the time.

The MIREX team has constructed a special filter for the 2-meter Mir radio station to help eliminate the desensing problem. However, because of higher priorities on onboard the Mir complex at the present time, the MIREX team has not been able to acquire all of the required permissions to deliver the filter to the cosmonauts on Mir. MIREX is still actively working on the situation. Pat Kilroy, WD8LAQ, reports that an effort is underway to send the filter with the Mir24/NASA5 crew. This task is being led by Will Marchant, Dave Larsen, and Miles Mann.

The following is a copy of a memo from Mir to the MIREX team regarding the recent Amateur Radio problems on the Mir space station:

An unidentified US ham recently interrupted a conversation between a Mir crew member and another ham on the ground. The unidentified station said, "Why don't you get your radios fixed?" The station never identified. This station also went on to say, "Who wants to talk to you anyway?".

The Mir crew member passed the following text message on to MIREX:

I realize this fellow's [behavior] is not representative of most hams, but it makes me think that US hams in general just don't understand the limitations [we have] without a filter for VHF. (We also don't have a store at hand to take our radios to..) Could you put out on the various ham nets in the US, an explanation as to why I can't hear hams on VHF, most often. I try not to let things like this bother me, but they do, as I don't want to be offending anybody.

The actions of the unidentified ham are unforgivable. It is interference like this that has caused the Mir crews to shutdown the Amateur Radio Experiment for months at a time. The MIREX team would like to remind people that if they not like the way the station on Mir is running, do NOT complain to the Mir crews. They are much too busy. Complaints and recommendations should insteadbe forwarded to MIREX President Dr. Dave Larsen [N6CO] or Miles Mann Director of Educational resources [WF1F]. And please DO NOT bother the crews. Everyone is doing the best with the limit resources available.

One of the options to get around the de-sensing problem is to temporarily move Mir Amateur radio operations to 70 cm. However, this would open up a whole new set of problems. Most 70 cm transceivers cannot work Mir for the following reasons:

1. Most transceivers sold in the USA do not transmit in the satellite subband between 435.000 MHz and 438.000 MHz.
2. Most transceivers cannot make the channel steps smaller than 5 kHz. A 1 kHz channel step works best when compensating with Doppler shift.
3. The Doppler shift on 70cm during a 10 minutes pass is +/- 10 kHz. This means groundstations need to adjust their transmitters and receivers in opposite directions at the same time, and the adjustments need to be made every 10 to 30 seconds for the duration for the pass. This is much too complicated for beginners.
4. MIREX has always felt that 2-meter 1200 baud simplex packet operations are the best for all that are new to satellite operations and is the most cost effective.

Note 1: Any comments about the 145.800/200 frequency should be directed to SAFEX.

Note 2: The reason Mir is sometimes heard on 145.985 MHz simplex is because the crew is using the 2-meter station as a backup source of family message traffic. The sysops N6CO and WF1F are uploading family message traffic daily. When Mir is in range of Europe, the crews (if they are not busy) will switch back to 800/200.

Remember the name of the 2-meter project on Mir is called the PMS Personal Message System. It is not a Public Bulletin Board System.

MIREX President Dave N6CO

* RS-12 NEWS *
==========
Doug Brandon, N6RT, reports that DX on RS-12 from southern California (Orange county area) has been very good. In the past few weeks Doug has worked XE2HWB, YS1RRD, VE6DXX, TI5RLI, VE6JAZ, and KL7AH.

Stations he's heard, but wasn't able to contact include HR2A, XE3HN and UA9CLB!

* STS-85 NEWS *
==========
Ken Ernandes, N2WWD, reports that STS-85 pre-launch orbital data is now available on the AMSAT Web page. The nominal OMS-2 Keplerian Elements and time-independent State Vector are posted on the Shuttle Orbital Data page:

http://www.amsat.org/amsat/sarex/orbit.html

As with all Space Shuttle missions, this page will be updated several times daily during the mission with actual orbital data.

A complete mission orbit profile and corresponding time-independent nominal State Vectors are posted on the State Vector Tutorial page:

http://www.amsat.org/amsat/sarex/vectors.html

Any questions or comments regarding this data should be sent to Ken Ernandes, N2WWD at: n2wwd@amsat.org

* FEEDBACK/INPUT WELCOMED *

Hi Gang!

I'd like to take a minute to invite you to stop into the Central Michigan Amateur Radio Club's Web Site, as well as the KB8TNQ Ultimate Amateur Radio Page! as soon as you can.

The first Site, CMARC's, is located at: http://www.kb8uyz.com/cmarc and offers information about our club. Additionally, and perhaps our biggest addition to the Site, (The "Trader's Page") offers FREE SPACE for you to post your items for sale. The guidelines are posted, so check it out.

The second, KB8TNQ's Page, is located at: http://www.kb8uyz.com/kb8tnq and is a great source for those in the hobby and those who are looking to get into Amateur Radio. With links to many other great sites, you'll have to stop in to check it out.

Thanks for your time and be sure you leave your comments and URL in the guestbooks, as we're always looking to add new ones.

7-3,
Jim KB8TNQ

Probably saw the video "Capricorn One". I think that was the name of it.

The film actually showed how easy it was to fake something like that. I am sure with technology nowadays it would be very simple to do.

On a side track...after seeing the Mars landing recently it would also be possible to fake that. After all from what I see of Mars on TV it looks strangely like any vacant land around here. Not that I say it was faked.

:-)

Phil...

Why?

You cannot possibly have licence to transmit on this
frequency?!

Message-ID: <33DB6AE3.51EF@worldnet.att.net>
Source record: 18232

Ok, I think I'll quit sending RF at FO29/20 until I know what I'm doing! Correct me on these if I'm wrong.

My uplink and down link are reversed. If I send on the high end it comes down on the low end of the downlink? If I send LSB I get USB down? I've read two differnt things with this next one! Should I adjust my uplink or downlink for doppler? Or even both? My transiever wants to track both at the same time (IC-820H). Help! 73's

2116. Weather Fax frequencies

Newsgroup: rec.radio.amateur.space
Date: 1997-07-27 00:00:00 UTC
From: brettwi@ix.netcom.com
Message-ID: <5rfr4n$i5n@dfw-ixnews11.ix.netcom.com>

Can anyone point me to a listing of weather sat. fax frequencies (in VHF range) for the NOAA or meteor sat series. After reading this months QST about a new fax program, I;d like to try it out, but the article only says 131.xx or 137.xx MHz.

Thanks

Brett WA6SXU

A person at the HamCom 97' AMSAT booth said to NOT purchase nor install mask mounted pre-amps for OSCAR use that were powered via the coax. He said that it (power via the coax) would cause interference but was not sure why.

Is he correct?
What features should I look for in a mask mounted 2M or 70CM OSCAR pre amp?

Thanks,
Mike N5KDY

I'm interested in the answer myself. Als, is there a wideband preamp
that will work 430/145 with a single cable feed?

Hello All,

I'm thinking about buying a used SASI Sat Tracker and would
appreciate ANY comments or feedback about your experiences
with this product. How does it compare to others on the market
like KC Tracker, etc.? Send email or post to this newsgroup.

Thanks.

(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
```

use the satellite if the beacon frequency wavers, or if downlink signals chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse. Excellent reports on this satellite lately.

* Radio Sport-10's beacon, ROBOT and transponder remain silent. Bad news to report regarding the satellite:

Leonid Labutin, UA3CR, responded,
"Yesterday I had meeting with Alex Papkov at GCC. We talked about RS-10 and other problems. He thinks there is 1 - 2% of the possibility to restore RS-10. It will be clear after coming back one good expert in GCC from his vacation. Cross fingers....."

Still no firm information as to what is wrong with the bird and why the problem occured. Let's pray that this report was a 'bad translation' from Russian to English.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite. Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w erp is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

* Radio Sport-16 currently has its Mode A transponder turned off. Andy Mirinov RK3KPK reports that RS-16 "now has a new voice on CW". All beacon reports received by Andy of this latest Russian satellite will be answered by him with a QSL card.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater. Recently a station has been heard sending Packet on this satellite. This is frowned upon and not one of the recommended uses of this satellite.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This

schedule has been known to be amended with little or no notice by the
ground control station.

The latest FO-29 Schedule:

July 25 (Fri) 09:23z JA
Aug 1 (Fri) 08:17z JD1200
Aug 8 (Fri) 00:30z JD9600
Aug 15 (Fri) 01:08z JA
Aug 22 (Fri) 08:26z JD1200
Aug 29 (Fri) 00:40z JD9600
Sept 5 (Fri) 01:18z JA
Sept 12 (Fri) 00:13z JD1200
Sept 19 (Fri) 00:51z JD9600
Sept 26 (Fri) 08:09z JA

* Mir Simplex - Astronaut Mike Foale has been farily active, making the
odd contact with radio amateurs on 2M. Both 145.800 down 0.600 split and
the 145.985 simplex have been used.

* Mir SAFEX Repeater - Not operational at this time.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

The SETI Institute Web site (http://www.seti.org) not only offers books
on the subject (including one by their president, Dr. Frank Drake), but
also has links to various SETI projects, including some being done by
amateurs. (I particularly like the one called Project BAMBI. :-))
So you could even get involved in SETI yourself!

(You can also get a SETII lapel pin just like the one Ellie Arroway
wore to that White House press conference. :-) :-))

Be sure to distinguish between FAX and the satellite direct transmissions.

You can receive the NOAA 12 satellite's APT transmissions directly on 137.50 MHz, NOAA 14 APT on 137.62, and Meteor 3-5 APT on 137.85 (when it's not turned off).

By "FAX", people generally mean the HF transmissions (e.g., 8080 kHz) sent by numerous stations in conventional facsimile format (120 lines per minute, etc.). There are many of these stations around the globe, and the best one for you depends on where you are, propagation at that time, etc.

No.

Except that using a high-gain, mast-mounted amp can aggravate the problem
is you're already suffering from adjacent strong signals.

> What features should I look for in a mask mounted 2M or 70CM OSCAR pre
> amp?
>
> Thanks,
> Mike N5KDY

I recommend (1) low noise figure and then (2) moderate gain.

>
> amp?

I think mounting a preamp on your mask is more likely to obscure your
vision, thus
making it difficult to tune your radios and operate the other equipment.
:-)

Mast-mounted pre-amps are the preferred method unless you have short
coax runs.
Powering via coax is more a matter of convenience. The in-line DC
coupler will add a
bit more loss, but it should be insignificant for most applications.

As for features, look for GaAs FET designs with 10-20 dB gain
(adjustable is even
better). You shouldn't run high power through the satellites, so a
pre-amp with
VOX (RF-sensed) T/R switching is much more convenient to use. However,
since
you typically just listen on one band and transmit on the other, this
feature is not
absolutely required. However, if you don't have it, you're sure to make
a mistake and
accidentally transmit through the amp, thus ruining your investment.

Happy tuning.

The following information is from the Remote Imaging Group (UK), which has a homepage at http://www.rig.org.uk/index.html.

NOAA 12_____137.5Mhz.
NOAA 14_____137.62Mhz.
NOAA HRPT on 1698Mhz and 1707Mhz.
OKEAN 4____137.4Mhz.
Sich -1_______137.4Mhz.
Meteor 3-5___137.85Mhz.
Meteor 3-6___137.30Mhz??
Meteor 2-21__137.85Mhz.
Meteosat 6 1691.0Mhz and 1694.5MhzMhz.

Vehicle status:

NOAA 12. *** Prime morning, south bound, satellite. *** This spacecraft continues to operate normally.

NOAA 14 *** Prime lunchtime satellite *** This spacecraft continues to operate normally.

METEOR 2-21 is currently on standby but when operational Meteor 2-21s signal is mostly weak and images are poor.

METEOR 3-5. With its height advantage over the NOAA spacecraft it is a thousand kilometres further away when near the horizon permitting views of the north
pole from southern England. Image quality is variable and this bird may be near the end of of it's life

METEOR 3-6. The return of Meteor 3-6 seemed likely when a FANAS prediction bulletin was issued from Moscow but although the encoded data purported to
be for Meteor 3-6 it was in fact consistent with the orbital parameters

of Meteor 3-5! Nothing has been heard from Meteor 3-6 for over 2 years now.

OKEAN 4. Continues to provide high quality images. It has been heard in Mauritius recently. European high-latitude observers are in the best position to receive
images. A schedule of transmissions is posted to the wx-sat mail list.

Sich-1. is a sister of Okean 4 is renowned for it's store and dump images. Images of Antarica, The Falkand Isles and Panama have been received in the UK.
Transmissons off until March 1997.

These satellites are in sun-synchronous orbits, so they go over at approximately the same time each day. NOAA-12 is around dawn/sunset, and NOAA-14 is in the early afternoon. I had given up on the Russian satellites, but maybe I'll try listening for Meteor 3-5.

I receive them on a Radio Shack scanner hooked up to a wire dipole and get pretty good (but not perfect) pictures. The signal is full-quieting, but the receiver bandwidth is wrong...

My software is my own - a first stab at DSP using my PC's sound card.

Many amateur radio operators have contacted us in recent months regarding availability of affordable electronic analysis and synthesis tools. We have now released Version 2 of the Professional Partnership (PP) Program. For the nominal one-time $975 charge, the PP program may be distributed throughout a club, organization or company. Of special significance is the profound level of Wireless/RF/Microwave capability included:

Nodal Circuit Analysis with True Two-Node Port Definition
Unconstrained Noise Analysis
Transmission Structure Synthesis & Analysis
Over 40 Single & Coupled Topologies
Strip (Planar) Structures
Wire Lines
Coaxial Arrangements
Waveguide (Non-TEM) Topologies
Passive Filter Synthesis
Lowpass
Highpass
Bandpass
Prototypes
Practical Reactively-Coupled Realizations
System & Receiver Design Support
Link, Terminal & Radar Analysis
System Architecture Characterization
Spurious Analysis
Transmit & Receive
Coincident & Tuned
Preselector & Output Filtering
Phase Noise Analysis
Time Domain Effects
Frequency Domain Effects

600+ Page User's Manual with Examples & References

Acquire a single PP Program package for your club, company or organization and you will be furnishing all of this needed capability to every designer, not just one! Our competitors are furious with us for having created the uniquely progressive opportunity. It seems they're still using dongles to hinder access to their own products.

Please contact me for additional information, or see:

ARLS026 September Phase 3D Launch Doubtful

ZCZC AS26
QST de W1AW
Space Bulletin 026 ARLS026
From ARRL Headquarters
Newington, CT July 30, 1997
To all radio amateurs

SB SPACE ARL ARLS026
ARLS026 September Phase 3D Launch Doubtful

The September 30 launch of the Phase 3D Amateur Radio satellite was put in grave doubt this week. It appears extremely unlikely that Phase 3D will be able to meet revised mechanical specifications in time to fly on schedule aboard the Ariane 502 rocket. AMSAT officials are holding out a glimmer of hope that the Ariane 502's schedule will slip just enough to let Phase 3D catch up again, but those chances are considered very slim. In a statement, AMSAT called the turn of events ''very bad news.''

AMSAT-NA President Bill Tynan, W3XO, confirmed that, in order to include Phase 3D, the Ariane 502's overall launch schedule would have to slip a month or two. But, he said, ''if it goes on schedule, we won't go on '502.''

The latest setback for the next-generation Amateur Radio satellite came when the European Space Agency (ESA) significantly increased its estimate of vibration levels the Phase 3D payload would be exposed to aboard the Ariane 502. The revised estimates mean AMSAT will have to move fast to make structural changes in the Phase 3D spaceframe in order to withstand the anticipated rougher ride. Phase 3D Project Leader Karl Meinzer, DJ4ZC, told ESA in mid-July that the work required by the agency's new information would prevent AMSAT from delivering the spacecraft to Kourou, French Guiana, by the specified August 10 date. AMSAT brought in an independent structural engineer to review the spacecraft's design and construction. Since his report, AMSAT said that ''substantial effort has been taking place at the Phase 3D Integration Lab in Orlando, Florida'' to make and install the recommended structural reinforcements. That work continues.

If the Phase 3D payload is not going to be available on time, AMSAT must supply a ''mass simulator'' representing the Phase 3D spacecraft

by September 5.

Tynan was philosophical about the latest complication for the Phase 3D program. ''This is the way engineering works sometimes. It's trade-offs and give-and-take with other people.'' He said it was too early to speculate on future launch possibilities.

You should TX LSB, RX USB on both FO-20 and FO-29 satellites, when in analog mode. The method I use is to first find my downlink freq offset by sending short (2 or 3 dits) of CW. Then I start calling CQ or noting my offset, answer someone else's by moving my TX/RX freq up or down to where there downlink is. You should NEVER move your TX freq unless you have a fairly good idea where you will be coming down. After awhile you will get a feel for the offset on each satellite. This seems to work for me. I hope this helps.

2147. Phase IIID Launch Problems

Newsgroup: rec.radio.amateur.space
Date: 1997-07-31 00:00:00 UTC
From: "Richard L. Tannehill, P.E." <rickw7rt@ibag.com>
Message-ID: <33E0E986.EE1@ibag.com>
Source record: 18262

Yes, it is VERY disturbing, after all the blood, time and treasury that has gone into this satellite. If the 502 should end up going up without Phase IIID, I think AMSAT should work a campaign to ask ESA to put us up on the next Arianne 4 that they can, stressing that the delay on OUR part was caused by a last minute change in flight specifications on THEIR part. We have already paid them our $1M + launch fee, and I hope they don't take the attitude that they launched our dummy load, and that satisfies the contract. I fear this whole thing turning into a giant boondoggle, with lots of finger point and recriminations unless we can get the structural changes ready for this launch date....whatever that turns out to be.

Rick Tannehill - W7RT

Interrest by making $50,000 ?

HERE"S A FUN WAY TO MAKE SOME EXTRA CASH!!!! WHO KNOWS YOU MAY EVEN
GET RICH!!!!!!!!!!!!!!!!!!!!!!!!!!!!You gotta be crazy! How on earth
do you think you can buy 50 grand for lousy 5 buck? Well, that's what
I was wondering, too until I came across this letter.First of all,
IT'S PERFECTLY LEGAL!(Call 1-800-725-2161) if you have any questions
about the following opportunity to make $50,000.00 and that probably
WITHIN LESS THAN TWO MONTHS!Well, here it goes:A little while back, I
was browsing these newsgroups, just like you are now, and came across
an article similar to this that said you could make thousands of
dollars within weeks with only an
initial investment of $5.00! So I thought, "yeah, right, this must be
a
joke," but like most of us I was curious, so I kept reading. Anyway,
it said
that you $1.00 toeach ofthe 5 names and addresses stated in the
article.
You then place your own name and address in the bottom of the list at
#5, and
post the article in at least 200 newsgroups. (There are thousands) No
catch,
that was it.I knew that that was the opportunity I had waited for a
long
time.I thought it was about time that the money of the world gets into
the right hands! OURS, right? I never had a doubt that this thing
will
actually work and even if it didn't, what were 5 stamps and $5.00 for
a
try? As I mention before, like most of us I was a little skeptical and
a little worried about the legal aspects of it all. So I checked it
out
with the US Post Office (1-800-725-2161) and they confirmed that it is
indeed
legal! Now, that's how your story WILL sound like, too if you
participate:Well GUESS WHAT!!... within 7 days, I started getting
money in
the mail! Iwas shocked! I still figure it would end soon, and didn't
```

give
it another thought. But the money kept coming in. In my first week,
I
made about $20.00 to $30.00 dollars. By the end of the second week I
had
made a totalof over $1,000.00!!!!! In the third week I had over
$10,000.00
and it's still growing. This is now my fourth week and I have made a
total
of just $42,000.00 and it's still coming in....Let me tell you how
this works
and most importantly, why it works...also,make sure you print a copy
of this
article NOW, so you can get the information off of it as you need it.
The
process is very simple and consist of 3 easy steps:STEP1: Get 5
separate
pieces of paper and write the following on each piece of paper "PLEASE
PUT ME
ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside each
of the 5 pieces of paper so the bill will not be seen through the
envelope to
prevent thievery. Next, place one paper ineach ofthe 5 envelopes and
seal
them. You should now have 5 sealed envelopes,each with a piece of
paper
stating the above phrase and a $1.00 bill.What you are doing is
creating a
service by this. This is perfectly legal! Mail the 5 envelopes to the
following addresses:

#1 J. A. Gang
970 Paces Circle #300
Apopka, FL
32703

#2 T.J. Kashin
2009 Hollyhock St
Pekin, IL 61554

#3 Fred Dufour
1596 39avenue
Montreal, QC
H1A4A2, Canada

#4 Robert Wisowaty
1341 Kane st.
La Crosse, WI 54603

#5 Adrian Silva
Tepozteco 102A
Cuernavaca MOR 62150

Mexico

STEP 2: Now take the #1 name off the list that you see above, move the other names up(2 becomes 1, 3 becomes 2, ect...) and YOUR NAME as number 5 on the list.STEP 3: Change anything you need to but try to keep this article as close to the original as possible.
Now, post your article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you
post, the more money you make!Don't know HOW to post in the newsgroups?
Well do exactly the following:**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!!BUT YOU HAVE TO POST A MINIMUM OF 200****If these instructions are too complex to follow, try Forte's "Free Agent." It is freeware for non-commercial use.To download it, simply use a search utility and type "Forte Free Agent". You should be able to find it.**That's it! You will begin receiving money from around the world within days! You may eventully want to rent a P.O. box due to the large amount of mail you receive. If you wish to say anonymous,you can invent a name to use as long
as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**Now the Why part:This entire principle works because it is in a
format of an upside down tree with thousands of branches. Everyone below you
will see to it that the tree continues because they want to get money. Those
below THEM will continue because THEY want to get the cash ect.Out of 200
postings, say I receive only 5 replies (a very low example). So then I made
$5.00 with my name at #5 on the letter. Now, each ofthe 5 persons who just
sent me $1.00 make the minimum 200 postings, each with myname at #4 and only
5 persons responds to each of the original 5, that is another $25.00 for me,
now those 25 each make 200 minimum post with myname at #3 and only 5 reply each, I will bring in an additional $125.00!Now,those 125 persons
turn around and post the minimun 200 with my name at#2 and only 5 replies
each, I will make an additional $626.00! Ok, now here is the fun part, each
of the 625 persons post a minimum of 200 letters with my name at #1 and they
each receive 5 replies, that just made me $3,125.00!!! With a original
investment of only $5.00! AMAZING! And as I said 5 resonses is actually VERY

LOW! Average is probable 20 to 30! So lets put those figures at just 15
responses per person. Here is what you will make:at #5 $15.00 at #4 $225.00 at
#3 $3,375.00 at #2 $50,625.00 at #1 $759,375.00. When your name is no longer on
the list, you just take the latest posting in the newsgroups, and send out
another $5.00 to the names on the list, putting your name at number 5 and
start posting again. The thing to remember is that thousands of people all
over the world are joining the internet and reading these articles everyday,
JUST LIKE YOU are now!!And this will go on and on and on...get the picture?
Well, there's 5,000,000,000 people in the world and most of them will
eventully end up being hooked into the internet. So there are virtually
unlimited resources. Of course this will work the best at the very
beginning so the faster you post, the better for YOU!So can you afford $5.00
and see if it really works?? I think so! People have said, "what if the plan
is played out and no one sends you the money? So what! What are the chances
of that happening when there are tons of newusers and new honest works?? I
think so... People have said, "what if the plan is played out and no one
sends you the money? So what! What are the chances of that happening when
there are tons of new honest users and new honest people who are joining the
internet and newsgroups everyday and are willing to give it a try? Estimates
are at 20,000 to 30,000 new users everyday, with thousands of those joining
the actual internet. remember, play FAIRLY and HONESTLY and this will work.
You just have to be honest.Make sure you print this article out RIGHT NOW,
also. Try to keep a list of everyone that you sends you money and always
keep an eye on the news groups to make sure everyone is playing fairly.Remember
, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea
to make the money!!GOOD LUCK to all and pleas play fairly and reap the
huge rewards from this,which is tons of extra CASH. **By the way, if you try to

deceive people by posting the messages with your name in the list and not
sending the money to the rest of the people already on the list, you will not
get as much. Someone I talked to knew someone who did that and he only made
about $150.00, and that's after seven or eight weeks! Then he sent the 5
$1.00 bills, people added him to their list, and inn 4-5 weeks he had over
$10k. This is the fairest and most honest way I have ever seen to share the
wealth of the world without costing anything but our time!!! You also may
want to buy mailing ande-mail list for future dollars.Please remember to
declare your extra income. Thanks once again......

God its crap like this that gives newsgroups a bad name. Some people should be more considerate of where they post there ads.

Subject: Mir status

TNC froze again, this time the PMS. Waiting for a replacement with Mir
24, Anatoli and Pavel, docking on 7th. Crew is preparing for their
arrival, getting Progress loaded with trash, to be undocked before next
crew. Greenhousing, but not yet showing cotyledons. Mike.

NASA reports that Astronaut Wendy Lawrence (Cmdr, USN) has been replaced
by her backup, Dr. David Wolf, for the next long duration stay on the
Russian Mir space station. The change will enable Wolf to act as a
backup crew member for spacewalks planned over the next several months
to repair the damaged Spektr module on the Russian outpost. Lawrence
does not fit in the Orlan suit which Russian cosmonauts use for spacewalk
tasks and never underwent spacewalk training. Wolf fits in the Orlan suit.

Lawrence will continue training in the backup role according to normal
procedures, in the unlikely event that she is needed.

On 05-Aug-97, a Soyuz TM26 spacecraft carrying a two-man crew is expected
to be launched to Mir on a Soyuz U vehicle from Baykonur, Kazakhstan.
Docking is expected on 07-Aug-97.

* PHASE 3D LAUNCH DELAY *
==========
On Wednesday 16-Jul-97, a meeting was held in Marburg, Germany between Dr. Karl Meinzer, DJ4ZC, the Phase 3-D Project Leader and AMSAT-DL President, Werner Haas, DJ5KQ, AMSAT-DL Vice President, and officials of the European Space Agency (ESA). The purpose of the meeting was to discuss the launch schedule for Ariane 502, on which the Phase 3-D spacecraft is to fly. At this meeting, the ESA officials re-iterated their intent to launch A-502 at the end of September and said that the launch campaign for this flight has already begun. They stated that, as part of this launch campaign the Phase 3-D spacecraft must arrive in Kourou by 10-Aug-97.

Earlier, ESA had informed AMSAT that, following analysis of data from the Ariane 501 flight, they had significantly increased their estimates for the acceleration and vibration environments which spacecraft riding on Ariane 502 are expected to encounter. As a result of this new information, AMSAT has been re-evaluating the structural capabilities of the Phase 3-D spaceframe. As a part of this effort, an independent structural engineer was brought in to review the spacecraft's design and construction. His conclusions were recently presented to Dr. Meinzer and AMSAT-NA people. His report stated that, in order to be confident of surviving these increased launch environments, a number of modifications must be made to the spacecraft. Since that report was presented, substantial effort has been taking place at the Phase 3-D Integration Laboratory in Orlando, Florida to manufacture and install the recommended structural parts necessary to increase the spacecraft's vibration and acceleration capability.

At the Marburg meeting, Dr. Meinzer made it clear to the ESA officials, that this work, made necessary by ESA's new environmental information, would prevent AMSAT from delivering the spacecraft to Kourou by the specified 10-Aug-97 date. Thus, it was the conclusion of the meeting that, as a result of these ESA specification changes, the Phase 3-D schedule and that of ESA for Ariane 502 are not compatible. Therefore, unless, something changes, which ESA does not presently contemplate, Phase 3-D will not be able to be launched on Ariane 502. Furthermore, in order to maintain the planned mass characteristics of the Ariane 502 vehicle, AMSAT must supply a mass simulator representing the Phase 3-D spacecraft to be sent aloft on the flight. This must be in Kourou by 05-Sep-97.

Despite this very bad news, Dr. Meinzer and other AMSAT officials expressed some degree of confidence the Phase 3-D may yet fly on Ariane 502. They based this on a number of activities taking place in the preparation of the launch vehicle that they believe could cause a slip in the currently published ESA schedule. The ESA officials attending

the Marburg meeting said that if a slip should occur, which they do not currently contemplate, that results in the two schedules again becoming compatible, efforts would be made to substitute the Phase 3-D spacecraft for the mass simulator. Therefore, AMSAT is continuing in the work of completing the necessary structural modifications to the spacecraft, and conducting environmental testing.

AMSAT-NA President Bill Tynan, W3XO, pointed out that revelations such as the increased vibration and acceleration requirements now imposed on the Phase 3-D spacecraft are not all that unusual in a development program such as the Ariane 5. He is sure that the situation is as unpleasent for ESA as it is for AMSAT, and is sure that ESA will be working on ways to reduce the environments on future Ariane 5s, possibly even on 502. It is NOT a matter of poor engineering, or bad faith, on the part of ESA, but merely what sometimes happens when the state of the art is being pushed.

Yes, this is a strange situation.

Apparently the vibration on the Arianne 501 launch were much stronger
than expected, thus requiring strengthening the payload. This also
means that commercial payloads intended for later launches of Arianne
5 must be strengthened, making them heavier and reducing the amount of
instruments carried. It also means that all equipment intended for the
commercial payload must be requalified for the higher vibration
levels.

I don't know what the new vibration levels are compared to other
commercial launchers, but if they are much higher, it can be hard to
attract customers, in case the levels are higher than what some (more
or less) standard comsat types are qualified for. My guess is that ESA
will have to do something to reduce the vibration levels in future
launches. The sad thing is that it will not help the 502 launch.

146.000 up = 435.800 down
145.900 up = 435.900 down

... and all combinations in-between.

Send LSB up, will return as USB down (no such probs with CW, hi).

Of course, you have to adjust for doppler shift - makes up to (appr.)
+/- 9 kHz on 70 cm and +/- 3 kHz on 2 m. Be aware that doppler works for
the uplink _and_ downlink.

Example (on AOL):
You send a carrier on 145.925
Sat receives it with +3 kHz doppler -> 145.928 on transponder
Sat retransmits on 435.872
You receive it with +9 kHz doppler -> 435.881

Without doppler, you would expect the sig at 435.875

Since it is an inverting transponder, the doppler effect is not as big
as it would be on a non-inverting transponder (would make a difference
of 9 + 3 = 12 kHz, here it is 9 - 3 = 6 kHz).

I hope this is correct...

That is your opinion. In reality, the success rate is not so bad.
Of course not on Ariane 5 (1 launch, 1 failure), but on Ariane 4 it's OK.

BTW: why is it that Americans can's spell Ariane?
Do you expect Europeans to write NASSA when naming your space agency?

A good percentage of Americans can't spell anything, Rob. They don't
teach spelling in school anymore. Johnny can't read, Johnny can't
spell. But in liberal, politically correct America that's O.K. "Just
spell it the way it sounds, Johnny. We'll give you E for effort, and
an Attaboy."

(I haven't seen the August QST yet, but...)

This is backwards. The RF from the satellite is (fairly wide) FM,
and the audio subcarrier of interest to your computer is AM. I've
had success with my own software on a junky 486/66 digitizing 8 bits
mono at 22.05 kHz. See:

http://mypage.direct.ca/v/ve7ldh/wxsat.html

> On the NOAA sats, I cannot get anything to print live copy. I
> did record the wav and got only a white screen with some black

>
> Can any help me on what I am doing wrong.

The sound of these satellites is very distinctive - the "whee whee
whee" of the subcarrier, overlaid with the "tick-tock" sync
pulses. Meteor sounds like it's running in slow motion, since
the subcarrier is the same (2400 Hz), but it's only sending
120 LPM, not 240 like the nOAA satellites.

Get the modulation right and it's dead simple - these puppies
are *loud*.

Howdy from Helena, Montana (KA7YAO Bill)

I tried the NOAA and Meteor WX satellites according to the artice in August QST and have only limited success with Meteor Sat and pictures are so so.

On the meteor, I am using my sat antennas, a FGR 9600 receiver, and pentuim computer with sound card set according to specs (mono, 8bit 11.025 hz) and I have program set to fm and receiver to am in order to get a so so copy.

On the NOAA sats, I cannot get anything to print live copy. I did record the wav and got only a white screen with some black splatter is best way to describe it.

Can any help me on what I am doing wrong.

Bill

Please forgive me for this e-mail, but I felt I just had to let more people know about this and get in on the ground floor!

Microsoft Educational Price Software

Students and Faculty Members Only (ID or Fee Statement Req)

Microsoft Office Pro 97 $179.95
Visual Basic 5.0 $99.00
Visual C++ $99.00
Visual Studio $229.00

Memory 16 MB 72-Pin $58
32 MB 72-Pin $139

Don't miss this opportunity, email me for more details. (webmaster@unique-software.com)

Thanks

SB freqs @ amsat $FREQ08.05
Amateur CW/Voice Satellite Frequencies for August 5, 1997.

BID: $FREQ0805
-----------------------------------------------------------------
Name Mode(s) Frequencies Beacon(s)

AO-10* B Uplink 435.030 - 435.180 CW/LSB
Downlink 145.975 - 145.825 CW/USB 145.810 CW

RS-10/11* A Uplink 145.865 - 145.905 CW/USB
Downlink 29.360 - 29.400 CW/USB 29.357 CW

RS-12/13 KT Uplink 21.210 - 21.250 CW/USB
K Downlink 29.410 - 29.450 CW/USB 29.408 CW
T Downlink 145.910 - 145.950 CW/USB 145.910 CW

RS-15* A Uplink 145.858 - 145.898 CW/USB
Downlink 29.354 - 29.394 CW/USB 29.3525 CW 29.3987 CW

RS-16* A Uplink 145.915 - 145.948 CW/USB 435.504 CW 435.548 CW
Downlink 29.415 - 29.448 CW/USB 29.408 CW 29.451 CW

FO-20 JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

AO-27 J-FM* Uplink 145.850 FM
Downlink 436.792 FM

FO-29* JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

MIR Simplex* Uplink 145.200 FM
Downlink 145.800 FM

Simplex 145.985 FM

SAFEX Repeater(Mir)*
Uplink 435.750 FM subaudible tone 141.3
Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
```

use the satellite if the beacon frequency wavers, or if downlink signals chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse. Excellent reports on this satellite lately.

* Radio Sport-10's beacon, ROBOT and transponder remain silent. Bad news to report regarding the satellite:

Leonid Labutin, UA3CR, responded,
"Yesterday I had meeting with Alex Papkov at GCC. We talked about RS-10 and other problems. He thinks there is 1 - 2% of the possibility to restore RS-10. It will be clear after coming back one good expert in GCC from his vacation. Cross fingers....."

Still no firm information as to what is wrong with the bird and why the problem occured. Let's pray that this report was a 'bad translation' from Russian to English.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite. Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w erp is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

* Radio Sport-16 currently has its Mode A transponder turned off. Andy Mirinov RK3KPK reports that RS-16 "now has a new voice on CW". All beacon reports received by Andy of this latest Russian satellite will be answered by him with a QSL card.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater. Recently a station has been heard sending Packet on this satellite. This is frowned upon and not one of the recommended uses of this satellite.

AO-27 TEPR (Timed Eclipse Power Regulation) States are as follows
As of July 6, 1997
TEPR STATE Time TX Status
---

1 n/a OFF
2 n/a OFF
3 --- OFF

4 21 OFF
5 17 ON at Med Power
6 --- OFF

The TEPR States are defined as follows:

Tepr 1, Started when the satellite Enters the Eclipse
Tepr 2, Started at (tepr 1 time) after the satellite enters the eclipse
Tepr 3, Started at (tepr 1 time) + (tepr 2 time) ...

Tepr 4, Started when the satellite enters the Sun
Tepr 5, Started at (tepr 4 time) after the satellite enters the Sun
Tepr 6, Started at (tepr 4) + (tepr 5) ...

You should note that TEPR states 1,2 and 3 happen during the Night Time passes and TEPR states 4,5 and 6 happen during the Day time passes. These occur during EVERY pass, not just over the U.S.A.

The times assigned to the TEPR states are chosen for the health of the satellite over operation convenience. Therefore, during parts of the year the satellite will turn on late or turn off early as seen by ground stations.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

The latest FO-29 Schedule:

Aug 1 (Fri) 08:17z JD1200
Aug 8 (Fri) 00:30z JD9600
Aug 15 (Fri) 01:08z JA
Aug 22 (Fri) 08:26z JD1200
Aug 29 (Fri) 00:40z JD9600
Sept 5 (Fri) 01:18z JA
Sept 12 (Fri) 00:13z JD1200
Sept 19 (Fri) 00:51z JD9600
Sept 26 (Fri) 08:09z JA

* Mir Simplex - Astronaut Mike Foale has been farily active, making the odd contact with radio amateurs on 2M. Both 145.800 down 0.600 split and the 145.985 simplex have been used. Please do not interrupt QSO's already in progress.

* Mir SAFEX Repeater - Not operational at this time.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

This FAQ is being updated and re-released on a weekly basis on
or about Monday. Any constructive suggestions are always welcome.

2178. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1997-08-05 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5s89nm$epb@blackbird.afit.af.mil>
Source record: 18293

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

2179. ***LOOKING TO BUY A CHEAP HT***

Newsgroup: rec.radio.amateur.space
Date: 1997-08-06 00:00:00 UTC
From: eugened@aol.com
Message-ID: <19970806032400.XAA01853@ladder02.news.aol.com>
Source record: 18294

Hello hams,

I am getting my ham ticket soon, and I am looking for a cheap HT. I can spend $100 (I know it's not much, but I'm only 14 years old) (Don't worry, my dad can make all the transactions). I am looking for a 2 meter HT, and it would be a *big* plus if the radio if the radio is wide-band transmit, or a mod that allows it. I live in the Philadelphia, PA area. Please e-mail me if you have anyting.

Thanks in advance, 73's,
EugeneD@aol.com

2180. Re: Educational Pricing

2182. MIR packet was up 8/06

Newsgroup: rec.radio.amateur.space
Date: 1997-08-07 00:00:00 UTC
From: glueck@saturn.caps.maine.edu
Message-ID: <5sbgcg$2lss$2@sol.caps.maine.edu>
Source record: 18297

Just for your general information, MIR was putting out some solid packet this evening. I heard it around 23:15 EDST, on 145.985 simplex. FOr a power-starved station, she's talking up a storm!

Dick, N1MDZ

2183. Macintosh Ham Radio Users Group

Newsgroup: rec.radio.amateur.space
Date: 1997-08-07 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-0708970734130001@wd1v.mv.com>
Source record: 18298
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.dx,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

There is an informal group of amateur radio operators that use Macintosh computers called "Macnet" with > 800 members world-wide.

We stay in touch with each other via packet & Internet and we have a HyperCard stack that tells the story of each of us called "Macnet Roster" that list

o CALL SIGN @ HOME PBBS
o FULL NAME
o Street ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

Macnet members can then communicate with one another directly or use our Macnet Moderated Mailing List to pose comments or questions to all of us on the Net.

To join Macnet, put YOUR INFO (via EMAIL or via disk using TEACH TEXT on a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER").

http://www.mv.com/ipusers/wd1v/Page2.html

-------<sent to all new Macnet Subscribers & Macnet Roster Updates>---------

Welcome to Macnet!

A trip to my home page also reveals there are many superb files and programs for amateur radio operators that want to use Mac computers. See more details in January 1997 QST, page 100. http://www.mv.com/ipusers/wd1v/

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Email Reflector - send an Email to all Macnet users on the Internet.

* Macnet Roster - a virtual "Who's Who" HyperCard stack with > 800 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and

their passions and put a design on your Mac Radio future. See what neat things are being done with Macs and Ham Radio!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get your new programs with just a click.

* Ham Radio.FAQ - compiled on a Mac with a lots of links to great Mac FTP sites for radio, electronic engineering, and similar data.

73,

2184. Re: 170.245 MHz transmitter schematics

Newsgroup: rec.radio.amateur.space
Date: 1997-08-07 00:00:00 UTC
From: nocsage@aol.com
Message-ID: <19970807162901.MAA25723@ladder02.news.aol.com>
Source record: 18299

So.. by looking at the topic.. Mc'Donalds uses 170.245 Mhz for there drive-thru windows?? If anybody has the schematics for that broadcaster/receiver I would be most appreciative if you could E-mail them to me.. Thanks

Nocturnal Sage

2185. Radio Meteor Obs. Bull. July 1997

Radio Meteor Observation Bulletin No. 48 August 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Barcelona, Spain (41 21' N, 01 59' E)
Frequency: 48.250 MHz
Transmitter location: most likely Czech television C2 C. Budejovica,
100 kW, Horizontal polarisation.
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
Antenna: astronomical azimuth 215 deg (=NE), elevation 0 deg.
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (100 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT and
"Data Capture" software with 9 second/18 sampling interval to store all
the > 0.5 s signal increases.

Introduction:
I started in "Meteor Scatter" in 1982 doing a lot of tests and contacts on
28 MHz, 50 MHz and 144 MHz. All my activity in MS is taking place in my home
town Torrelles de llobregat. During these years I saw sporadic-E TV of Norge,
Sverige, Czech, Danmark.
During the august 1994 with the GET (Group of Telecommunications Study),
we put on the air the 144 MHz beacon. This beacon was running about one year.
I made a study about the "back scatter" reflections and actually I am study
the possibility of putting the beacon on again.
Also since 1994 I do a lot of MS lectures in radioclubs and Universities to
promote Meteor Burst Communications.
For the 1995 Geminids I built a 48.250 MHz converter to 28 MHz I.F. I received
a lot of reflections with it!
A big problem is to identify the TV signals, which can only be done during an
opening of sporadic E. I can see the unidentified Program C2 TV at the same
time that I receive continuous signal in my receiver.

I am looking for help to identify beyond doubt meteors (eliminating sporadic-E,
tropo etc.).

Counts of audio signals of >0.6 mV lasting for at least 0.5 s
(not necessarily meteors!). Only the overall trend is significant.

. ? probably affected by sporadic-E, direct reception

Enric Fraile Algeciras

```
Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 deg (= E),
elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB
```

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

July 1997

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Notes:
. & sporadic-E, direct reception.
. ? probably affected by sporadic-E, direct reception

. no observations on July 14, 17, and 18 because of thunderstorms.
. delta Aquarids and alpha Capricornids activity between July 27-31.
. local time = UT + 2 hours.

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

. ? probably affected by sporadic-E.
. delta Aquarids and alpha Capricornids activity between July 27-31.
. July 10: sporadic-E. Jim Smith (G0OFE) <jimsmith@lds.co.uk> writes on the vhf-dx-discuss@blacksheep.org discussion list: "Probably the best day of the year for Sp. E".
. local time = UT + 2 hours.

Pierre De Groote / comments by Chris Steyaert

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 3 element Yagi, direction south
Receiver: AR-8000 at 53.7600 MHz, SSB mode.
Transmitter: 30 kW TV video carrier near Bari, Italy, distance 700 km,
direction south. Several high mountains in transmitter
direction prevent direct and tropospheric reception.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, pictures with interference, sporadic-E, E-layer
and FAI propagation are manually rejected.
More details see <http://www.net4you.co.at/user/kuneth/info.html>

All meteor counts below are corrected for a full hour observing time. If
the recording duration is 20-40 minutes, a dot is shown after the value.
Data for less than 20 minutes observing time are not shown here.

Meteor counts of reflections longer than 6.5 seconds: assumed
to be overdense.

Single transmitter until July 12, 1997

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations

to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

3. ANNOUNCEMENTS

Bernd Gapinsky (gap@mail.ilk.de, AmateurRadio DK3XT in Germany, AB7IY in the US) runs a webpage ("Make More Miles On VHF" <http://www.ilk.de/sites/gap/>, <http://www.qsl.net/dk3xt/>) that deals mainly with the amateur radio
aspect of meteorscatter, but it has also the largest number of hyperlinks to other meteor scatter pages.

Anthony Mallama <tmallama@ccmail.stx.com> communicates that his document "A Radio/Computer System for Automated Detection of Meteors" is now on-line in the AMS (American Meteor Society) Web Site,
at http://www.serve.com/meteors/mallama/mallama1.html

I'm using STSPLUS ver. 9650 tracking program. How do
I display the Mir Space Station and Shuttle Discovery
tracking at the sametime? I can only display the Mir
or Discovery, but not both.

Thanks,

Steve Baker

So.. by looking at the topic.. Mc'Donalds uses 170.245 Mhz for there
drive-thru windows?? If anybody has the schematics for that
broadcaster/receiver I would be most appreciative if you could E-mail them
to me.. Thanks

I believe that is what is being inferred here. The Engineers do not seem to
even have a fix on the performance of the propulsion plant in the Ariane 5
bird, sounds like too much of a gamble. This is quickly moving from opinion
to fact. Why not push for a Ariane 4 or some other tried and true bird for
the launch.

Mike RS-10 has been dead since May 25. There is a slight chance that
it can be revived. See amsat.org's weekly status on all amateur
satellites for more info.

Steve, on mine I select from the main menu F6 Set/Read/Save TDRS and
Realtime Satallites. Then to F1 Display/Modify Satallite Assignments.
Enter the information in the appropriate places save and it should
display both.

Eugene,

Three young people in the Phoenix area now have felony records because they used their "wideband", (opened up) ham HT's to transmit on police channels. The local authorities, the FBI, and the FCC agents, were not amused. I recommend that you purchase an HT with only wideband RECEIVE capability, and that you do not open it up for wideband transmit. In the local Explorer Post I work with, widebanding a loaned Post radio is forbidden and grounds for revocation of membership.

There are a number of older synthesized 2 meter HT's on the market for between $100 and $150. Be sure that it has programmable PL (CTCSS sub-audible squelch) built-in, or you may find the radio is not too useful in your area, depending on which of your repeaters also have PL.

Good Luck with your new ticket! I hope you explore many of the areas of the hobby besides 2 meter repeater/autopatch operation. There are many more areas such as satellites, packet, HF DX'ing, ATV, etc. Although somewhat more expensive, I'm sure there are radio clubs in your area that would be willing to help you get started.

and during the last nights, MIR could easily be seen over Europe during
its 20 to 22 h UTC passes. Also the Progress (?) transporter following
in a short (increasing!) distance was visible. No telescope or whatever
neccessary!

Going a little further, you can make one of the satellites a target and then watch how the two interact as you track your main satellite. You can find the function by hitting F10 until it comes up on the menu.

You can also save multiple background satellite configurations. I have several - one for amateur satellites, one from the 100 brightest list and the default...

It is all well documented in the manual file (stsplus.doc)- just DON'T print it! It is 220 pages!!

Regards,

Bruce, WB4YUC

Subject: 170.245 MHz transmitter schematics

So.. by looking at the topic.. Mc'Donalds uses 170.245 Mhz for there
drive-thru windows?? If anybody has the schematics for that
broadcaster/receiver I would be most appreciative if you could E-mail them
to me.. Thanks

I believe that is what is being inferred here. The Engineers do not seem to
even have a fix on the performance of the propulsion plant in the Ariane 5
bird, sounds like too much of a gamble. This is quickly moving from opinion
to fact. Why not push for a Ariane 4 or some other tried and true bird for
the launch.

Mike RS-10 has been dead since May 25. There is a slight chance that
it can be revived. See amsat.org's weekly status on all amateur
satellites for more info.

Hello Bill
Sounds like youve got a major problem, because WXSAt works like a dream and will produce images that look like 35 mm glossy photos, if you do things right!
Your receiver must be set to FM!..The bandwidth of the wx sats is about 40 to 50 khz. If your receiver is set to wide band FM, it will be much too wide and allow too much noise around the signal!..If it is narrow band FM, it will clip off much of the signal data and your images will be poor.
I really suggest that you become knowledgeable about the receiving requirements before you go any further. Many weather satellite enthusiasts just modify a scanner and do just fine. I did this for years before I purchased a commercialy available weather satellite receiver.
You can get a lot of good info from the following web site:

http://members.aol.com/jkktl/ham.htm

Just follow the links to where you need the most info. There is a weather sat FAQ that will help quite a bit.

Good Luck
Jim

2204. Object following Mir?

Newsgroup: rec.radio.amateur.space
Date: 1997-08-09 00:00:00 UTC
From: Brian Gibbs <Brian@brimar.demon.co.uk>
Message-ID: <gmoN4CAYiO7zEwLW@brimar.demon.co.uk>
Source record: 18319

During a visual observation of the MIR this evening, 22:22 hours local,Sat 9th Aug, I spotted an object apparently tracking some distance behind. Could this have been a Progress vessel about to dock, or is there some other activity going on at present? Any information gratefully received. I have an avid band of sky-watchers waiting to find out more.

There was also a very bright shooting star crossing the orbit track. Nice bonus!

For those interested, I have plotted a few forthcoming visual orbits for the MIR from the U.K. They are listed below:-

MIR Visual Orbits, AUG 1997
``````````````````````````

9th 2218

10th 2120 2257

11th 2200

12th 2103

13th 2140

14th 2043

All times are local (utc + 1 hour), and are when Mir rises above the horizon in the U.K.

Allow appx 4 mins or so after given time for sighting.

Happy sky watching! 73...Brian...g3mbn

Mir 24 with the crew of Rodnik successfully docked, and we are enjoying
the company of Anatoli Solovev and Pavel Vinogradov. Anatoli and Pasha

are settling in and we have already moved my seat and spacesuit over to their Soyuz have a big bag of baggage in the seat where my suit lay, in their Soyuz. We are conducting handover activites now, and then will prepare for EVA in the node on the 20th, and outside on Spektr, to do initial repairs, on the 3r be with Anatoli for the node eva, and I will be with Anatoli, for the Spektr EVA. Lots to do Here, so forgive us if we cannot reply to you and all your very welcome good wishes. I try to monitor each day, and pass on your mecrew members. I think Pasha and Anatoli will be active on the radio, once they are settled in.
Mike.

* HOUSTON AMSAT NET NEWS *
==========
The Houston AMSAT Net is reaching another milestone in its history. In the next few weeks, Internet users will be able to hear the Houston AMSAT Net live on the World Wide Web using Real Audio. Scott at North American Internet, who had been digitizing the Houston net from commercial satellite, will no longer be able to do it. Last week Bruce Paige, KK5DO, digitized the net to Real Audio, and found it worked just fine.

Scott will have a live stream available for the Houston people at the beginning of September. What this means to you, is that you can now hear the Houston AMSAT Net live as it is happening anywhere in the world via Real Audio. You can participate in the Net by calling in, checking in, or asking a question which will be answered live, or you can check in via email or use the IRC where a group from the net chat while the net is in progress. Houston AMSAT Net audio via the Real Audio can be fed into repeater systems allowing repeater users to hear net audio on their transceivers.

The other important feature of the use of the digitized Real Audio feed is that if a particularly interesting event should develop during the week when the net is not in progress, the Real Audio feed can be updated by

appending to the end of the net. What Bruce plans on doing is making a note on his web page (http://www.phoenix.net/~paigecom) that particular minutes (51:01.3 to 53:03.4, for example) were added on August 9 to the digitized audio file.

The Houston group also plans to carry their net over the 50 minutes allocated on the satellite feed (Tuesday, 8PM CDT on SBS 6, T13B, 6.2 MHz at 74 degrees). This means if there is an especially heavy news week, they can continue the net locally and continue the feed over the Internet.

The satellite transponder time used to relay the Houston AMSAT Net is generously donated by the W0KIE Network, and space for the Real Audio feed is donated by North American Internet.

[Info via Bruce Paige, KK5DO]

* MARS PATHFINDER NEWS *
========================
NASA's Mars Pathfinder spacecraft has successfully concluded its primary science mission and fulfilled all of its objectives by returning a wealth of new information about the planet Mars. The robotic lander, which continues to explore an ancient outflow channel in Mars' northern hemisphere, completed its milestone 30-day mission on 03-Aug-97, and has captured far more data on the atmosphere, weather and geology of Mars than scientists expected. In all, Pathfinder returned 1.2 gigabits of data and 9,669 images of the Martian landscape.

The rover's performance easily surpassed its designers' minimum expectations. Engineers designed the roving vehicle's electronics, battery power and hazard avoidance features to see it through at least a week of safe roving, not knowing beforehand what conditions it might encounter on Mars. After 30 days, the rover is still healthy and has clocked 52 meters (171 feet) distance, circumnavigated the lander and taken 384 spectacular views of rocks and the lander.

Atmospheric-surface interactions, measured by a meteorology package onboard the lander, are confirming some conditions observed by the Viking landers 21 years ago, while raising questions about other aspects of the planet's global system of transporting volatiles such as water vapor, clouds and dust, said Science Team Leader Dr. Timothy Schofield. The meteorology mast on the lander has observed a rapid drop-off in temperatures just a few feet above the surface, and one detailed 24-hour measurement set revealed temperature fluctuations of 30-40 degrees Fahrenheit in a matter of minutes.

Pathfinder landed within 20 kilometers (13 miles) of the targeted landing site on 04-Jul-97. The landing site coordinates in Ares Vallis were later identified as 19.33 degrees north latitude, 33.55 degrees west longitude.

Pathfinder's performance in the Martian atmosphere will be of great value to Mars Global Surveyor, which will aerobrake through the Martian atmosphere to circularize its orbit when it reaches Mars on 11-Sep-97. The Pathfinder navigation team, led by Peter Kallemyn of JPL, estimated horizontal wind velocities in the upper atmosphere, which accelerated the spacecraft's

descent velocity by about 13 meters per second (20 to 25 miles per hour).

After being suspended from a 20-meter (65-foot) bridle and firing its retro rockets, a 5.8-meter (19-foot) diameter cluster of airbags softened Pathfinder's landing, marking the first time this airbag technique has been used. The spacecraft hit the ground at a speed of about 18 meters per second (40 miles per hour) and bounced about 16 times across the landscape before coming to a halt. The airbag seems to have performed perfectly and sustained little or no damage. To top it off, the spacecraft even landed on its base petal, consequently allowing its thumb-sized antenna to communicate the successful landing to a jubilant team on Earth only three minutes after touch down.

Science data from the surface of Mars will continue to be collected and transmitted to Earth, then analyzed by scientists, as Pathfinder enters its extended mission. The lander was placed in a two-day hibernation period to recharge its battery after the conclusion of the primary mission, and the flight team will begin to power the lander battery off each Martian night now to conserve energy. The rover's batteries remain in good condition, but are not rechargeable.

rec.radio.amateur.space

First of all, I want to thank everyone that visited my Mars Pathfinder Site, at http://dhcom.com/astronomy/pathfinder.htm. This site continues to do very well, and is updated at least once a day.

We are approaching September 12, 1997, which will mark the next Mars Mission, the Mars Global Surveyor will enter orbit around the red planet. We have posted a site dedicated to this next mission, which you can find at http://dhcom.com/mars. In the next coming weeks, we will begin to update this site with the very latest news, information and photos.

Thanks again for all your visits, and please, let me know what you think of the new site!

2212. QST & Wxsat - Mod for Pro2022?

Newsgroup: rec.radio.amateur.space
Date: 1997-08-10 00:00:00 UTC
From: paulegan@interlog.com
Message-ID: <33ededa3.1548761@news.interlog.com>
Source record: 18180

This article in QST has got me interested in wxsats again. I have a Pro-2022 and wonder if anyone has sucessfully modified one of these radios for WXsat reception. I was reading around on the web and found the mod for the 2006 but it discusses more ceramic filters than my little 2022 has. Also of interest was the article by Geoff Chester "BUILDING A TOTALLY PORTABLE A.P.T GROUND STATION" in which he states:

"Modification is very simple: near the top center of the main board is an MC3359P IC chip, and just below pins 3 and 5 is a small orange rectangular device. This is the ceramic lattice 455kHz IF narrowband filter, in this case a Murata SFR-450D, labeled FT-2 on the circuit board. It has 5 pins: viewed from the component side there are 4 on the right and 1 on the left. Remove the filter and solder in a 0.01 mfd capacitor between the solitary left pinhole and the upper right pinhole (between pins 3 and 5 of the IC). Next you need to re-align the radio, which I did by connecting a sweep generator to the antenna lead-in and an oscilloscope to pin 5 of the MC3359P. I adjusted the IF tuning coils L5 and L6 until I got a flat response over the new bandwidth. This adjustment was fairly minimal, and the scanner would have worked just fine had I left the coils alone"

My Pro-2022 has a MC3361 and the filter (pcb part CF1) is marked LF-B15 91. It has only 3 pins that go to the IC's pins 3,4 and 5. Is there any chance of opening up the FM bandwidth of this radio?
Thanks.
Paul Egan VE3GFY

We watched the 0500 UTC passing of MIR Sunday (UTC) morning near Tacoma, WA. Nice bright object followed by another somewhat dimmer object 3 to 4 minutes later. It certainly was the same orbital path but seemed quite a ways behind MIR. It still was an impressive sight seeing MIR pass by with its friend(s?) following behind.

I understand they undocked progress before the soyuz arrived. The new crew arrived Thursday, he's talking Saturday so I'll bet it's progress he's seen.

Unfortunately Ken, Phase 3D is not going anywhere anytime soon. It is still under construction in Orlando. The ESA wanted Phase 3D in Kourou August 10th, but that didn't happen. So now, in place of our satellite, the ESA wants us to ship them the Phase 3D mass simulator (a concrete block), and they will launch that into space in place of our satellite.
What this all means is that AMSAT paid the ESA over a MILLION dollars to put a block of concrete in orbit. If you donated any money to the Phase 3D project, then you got screwed by the ESA (just like the rest of us.) The truth is that we don't know when P3D is going to be launched or even what rocket it will be riding on. If I sound pissed... you're right.

73 de KB7ADL
Vince

P.S. There is still a possibility that Phase 3D could be launched on 502, but that possibility looks remote at this time.

All of us who donated to P3D knew, or should have known, that we were supporting the development of a very high risk project. I think that it will eventually be launched. But will it work as planned. Again a high risk. If it doesn't there will be lots of people who will say we should have done something else that they just KNEW would work. Second guessing.

Vince, you have made your point so many times. Your attitude is not helpful and if I may say so is kind of immature.

Unfortunately Ken, Phase 3D is not going anywhere any time soon. It is still under construction in Orlando. The ESA wanted Phase 3D in Kourou August 10th, but that didn't happen. So now, instead of the Satellite, the ESA wants us to ship them Phase 3D's mass simulator (a concrete block) and they will launch that into space, in place of our satellite.
What all this means is that AMSAT paid the ESA over a MILLION dollars to have a block of concrete put in orbit. If you donated any money to the Phase 3D project, then you got screwed by the ESA (just like the rest of us.) The truth is that we don't know when P3D will be launched, or even what rocket it will ride on. If I sound pissed... you're right.

73 de KB7ADL
Vince

P.S. There is still a possibility that P3D could get a ride on 502, but that possibility looks remote at this time.

2221. F.S. 1296 MHz RX Converter/LNA for Phase 3D

Newsgroup: rec.radio.amateur.space
Date: 1997-08-11 00:00:00 UTC
From: paul.a.papavero@boeing.com
Message-ID: <33EF981A.6ABD@boeing.com>
Source record: 18187

For sale: Microwave Modules Receive converter with LNA, 28 MHz IF, for $60.00 delivered CONUS.

Call John at 714.993.0435 eves (if no answer, please leave message...I will return the call.

Thanks

2222. NORAD Two-Line Orbital Element Sets (TLE042)

Newsgroup: rec.radio.amateur.space
Date: 1997-08-11 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5so5gq$b1r@blackbird.afit.af.mil>
Source record: 18188

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2223. NORAD Two-Line Orbital Element Set: Space Shuttle (97222.89311473)

Newsgroup: rec.radio.amateur.space
Date: 1997-08-11 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5so4ri$at5@blackbird.afit.af.mil>
Source record: 18189

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

2224. Re: Object following Mir?

Newsgroup: rec.radio.amateur.space
Date: 1997-08-12 00:00:00 UTC
From: martin@tvl.com
Message-ID: <33eff699.1746477@news.helix.net>
Source record: 18190

I also saw the object tracking some distance behind on 9-Aug. However, didn't the Soyuz dock with Mir on 7-Aug??

Martin

```
Aland Island Expedition on RS12 - OH0/SM0HPL
--------------------------------------------

I will be active from OH0 (Aland Isl) on RS12 Aug 14th to 17th.
We will work some shorwave also, but I intend to try to be active
as many passages as possible.

The QTH is near the village Geta in the northern part of the island.
(60.40N 19.79E, QTH Loc JP90VJ).

Rig to be used: Index QRP+ running about 3 Watts to a dipole (21.2 Mhz)
Icom R71E and a Turnstyle (29.4 Mhz)

QSL 100% sure via buro

73's /See u

Anders OH0/SM0HPL

Im Artikel <33eff699.1746477@news.helix.net>, martin@tvl.com (Martin Ortmayr) schreibt:

>I also saw the object tracking some distance behind on 9-Aug. However,
>didn't the Soyuz dock with Mir on 7-Aug??
>
>Martin

Yes it did !!! The object you can actually see following the MIR spacestation
is the old SOYUZ-TM wich was used by the previous crew. They had to remove it from the docking port to make place for the new crew with their SOYUS ship.

Best 73,

Oscar

2230. FS: For Sale Brand New 2M HTX-242

I am selling a brand new Radio Shack 2M Mobile unit, model HTX-242, cat#
19-1126. This unit only been turned on to be sure everything is fully
function. I anticipated getting my Tech License but have been unable to
motivate myself to do so. My attention is being focused on SWL. The price
is $200.00 and I will pay all shipping cost. I will accept Money Orders,
Bank Check, or sned COD if you prefer.

it's always been possible to fake it -- but if it was fake, there should
be a lot more proof around and a lot of people to keep quiet...

2233. KR500 Rotor problem

Newsgroup: rec.radio.amateur.space
Date: 1997-08-14 00:00:00 UTC
From: Henk-PA3GUO <pa3guo@amsat.org>
Message-ID: <33F31E0A.3BB@amsat.org>
Source record: 18199
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.space

My KENPRO KR500 (elevation) rotator normally stops turning/moving
at 0 and 180 degrees, the maximums.

Last week I was only able to move it from 30-60 degrees, since
yesterday it is even stucked at 35 degrees. I can hear the motor
being mechanically blocked.

It looks like a mechanical (brake?) problem.

Is this a know problem of the rotator ?
Does anyone know how to repair it ?

Please any reactions to : pa3guo@amsat.org

Many thanks,

Henk / PA3GUO

2234. ARLS027 SAREX team wins award

From ARRL Headquarters
Newington, CT August 14, 1997
To all radio amateurs

SB SPACE ARL ARLS027
ARLS027 SAREX team wins award

The Shuttle Amateur Radio EXperiment, or SAREX, program has won a NASA Group Achievement Award based on SAREX activities during the recent STS-94 shuttle Columbia mission. SAREX Principal Investigator Matt Bordelon, KC5BTL, received the award on behalf of the SAREX Working Group and others who supported the SAREX payload during the mission. These include AMSAT school mentors, ham volunteers who staffed the Johnson Space Center Customer Support Room during the mission (Will Marchant, KC6ROL, and Charles Sufana, AJ9N), the ARRL Educational Activities Department staff and other HQ staff members (Jennifer Gagne, N1TDY, and Rick Lindquist, N1RL), and ham volunteers from Johnson Space Center and the Johnson Space Center Amateur Radio Club.

JSC Director George Abbey presented the award during the STS-94 mission debriefing session at Johnson Space Center on August 12. Individual members of the SAREX team and those who helped support the SAREX mission will receive certificates for their role in the flight activity.

Three hams were among the members of the Columbia crew for STS-94: Jim Halsell, KC5RNI, the mission commander, Janice Voss, KC5BTK, and Donald Thomas, KC5FVF. The crew nominated the SAREX team for the award in recognition of ''all the planning, preparation, and execution required to perform these missions'' and ''to thank the people who made it happen,'' Bordelon said.

The citation reads: ''For your outstanding support during STS-94 that allowed us to contact 17 schools around the world and make multiple contacts with Mike Foale aboard the space station Mir.''

All 17 scheduled SAREX school contacts were successful, including the first-ever SAREX contact with students in the People's Republic

of China. In addition to contacting Foale aboard Mir, the hams aboard Columbia also made several random contacts with earthbound hams.

STS-94, the 24th SAREX mission, flew from July 1 until July 17. It was a ''refly'' of the aborted STS-83 mission in April.

ARLS028 KB5UAC/Mir activity

ZCZC AS28
QST de W1AW
Space Bulletin 028 ARLS028
From ARRL Headquarters
Newington, CT August 14, 1997
To all radio amateurs

SB SPACE ARL ARLS028
ARLS028 KB5UAC/Mir activity

US astronaut Mike Foale, KB5UAC, continues to be sporadically active on Amateur Radio from the Russian Mir space station. Foale has been using 145.985 MHz while over the US, and the 145.200/800 MHz split pair elsewhere.

In a recent packet bulletin, Foale also said he expects his new Mir 24 crewmates, Anatoli Solovev and Pavel ''Pasha'' Vinogradov, to be active on the radio ''once they are settled in.''

The new crew members arrived August 7 aboard the ailing Mir to replace the Mir 23 contingent of Vasily Tsibliev and Alexander Lazutkin, who returned to Earth August 14. Foale will remain aboard Mir until September. ''We are conducting handover activities now,'' Foale related in his message. He said the team will prepare for a so-called ''internal space walk'' on August 20 to relocate power cables from the damaged Spektr module to Mir's Core module. A decision on whether Foale would get a chance to participate in a later space walk in September was pending this week. The Mir crew has been attempting to clear up vexing problems with its onboard oxygen-generation system.

''Lots to do here,'' Foale said in his hurried posting. ''I try to monitor each day.'' Foale has been experiencing problems with his TNC, which has been losing messages. A new TNC was to have been delivered along with the Mir 24 crew members, but that did not happen.

NASA, meanwhile, reports that Foale's scheduled replacement, astronaut Dave Wolf, KC5VPF, is undergoing intensive training in Russia in preparation for swapping places with Foale in late September.

Message-ID: <01bca905$f1d797a0$6ff682c1@default>
Source record: 18202

Can anyone out there help me!

I have been trying to compile (as near as dam'it) a callbook on PC formatted CD-ROM.

This has been a very large task with around 70% of theUK entered and most USA states entered, but with the ever growing numbers of operators, etc, it will continue to be an ongoing project, so far 3 years down the line I have a CD-ROM with access to over 7.8 Million operators world wide.

I now wish to get this to a stage nearer publishing.

IF ANYONE CAN GET ME ANY CALLSIGN DATABASES IN DBASE3/4 FORMAT (PC BASED).

In return I will mail them (NOT E-mail but land mail, as it is TOO big) the curent version free of charge, and the finished version, later this year when it goes to press (FREE OF CHARGE), with a mention of your name and callsign (if applicable) for the help that you have given me to complete this task.

If anyone can help, please e-mail me on qmation@dial.pipex.com

All the best

James Sawle

2242. IC-820H 9600bps

Newsgroup: rec.radio.amateur.space
Date: 1997-08-16 00:00:00 UTC
From: fiorito <fiorito@unikey.com.br>
Message-ID: <5t497c$fhl@ax.apc.org>
Source record: 18208

I need help to modificate my ICOM IC820H for 9600 bps reception in the
subband
to allow 9600 operation whith ko-23, k0-25 etc.
tks in advance
J. M. FIORITO (PY1WOO)

2243. $50,000 In 90 Days !!

----------TO REPLY:----------
See bottom of this public notice for details....

*****ARE YOU READY AND WILLING TO MAKE OVER $50,000*****
**********DOLLARS IN THE NEXT 90 DAYS ????**********

You are about to witness, first hand, the most unique
and revolutionary money making program ever offered to
the general public !! This PROVEN business opportunity
offers the most POWERFUL and AFFORDABLE method of making
CASH MONEY from the comfort of your own home.

A MARKETING OPPORTUNITY LIKE THIS DOES NOT COME TO
EVERYONE IN A LIFETIME !!

CALL IT LUCK, CALL IT FATE, CALL IT ANYTHING YOU WANT,
THE FACT IS THAT YOU ARE NOW IN CONTROL OF YOUR FINANCIAL
FUTURE !!

IT IS TOTALLY UP TO YOU, AND ONLY YOU, WHETHER YOU WILL
MAKE THE FINANCIAL DECISION THAT WILL CHANGE THE WAY
YOU LIVE YOUR LIFE !!

IS THIS THE KIND OF OPPORTUNITY YOU'VE BEEN LOOKING FOR ?

TO FIND OUT, ANSWER THESE QUESTIONS :

1. Are you tired of your job, boss and the same old work ?

2. Would you like more money-to pay off debt, save, spend
any way you want, or to give to others ?

3. Would you like to be in business for yourself-to be your
own boss, better job, success, freedom ?

4. Would you like more leisure time-to travel, rest, play,
have time for yourself and your family ?

5. Would you like to work from home-at your own pace, with
no one telling you what to do ?

6. Would you like FINANCIAL FREEDOM ???

7. WOULD YOU LIKE TO GET STARTED WITH THE REST OF YOUR LIFE
IN A WAY THAT YOU NEVER DREAMED POSSIBLE !!

If you answered yes to the above seven questions you owe it
to your self and family to take advantage of this opportunity.

I always set my transceiver so that when you push PTT at outside hand
band, you transmit within the ham band. Just set your tranceiver so
that it transmits to the packet freqs or something.

I was interested in wide band RX/TX transceiver, but no more. I get
too much intermods in big city. Radio Shack's HTX-202 and 404 are
some good choices. They don't get interfered much... well...
cheap HT ? you can buy a ADI's AT-600 dualband at $269 US or so at
present.

Title : Happy birthday to KO-23!!!
==
Hello everyone

Yesterday was KO-23 5th birthday (Aug. 11th 1997yr).
Though the predicted lifetime of KO-23 is 5 years, her health is good so far!!
I congratuate her birthday and hope to be loved from many ham continuously.

73

From HL0ENJ

KITSAT-OSCAR-25 is performing well in "Pacsat" duty. KO-25 has a 9600 baud FSK downlink on 436.500 MHz, and an uplink on 145.980 MHz. Raw telemetry captured on 14-Aug-97 at 02:01:15 by KD2BD in New Jersey reads as follows:

* MIR NEWS *
============
Orbital Report On-Line reports that the Soyuz TM26 spacecraft was
successfully launched to the Mir space station on August 5 and docked
with the station two days later. The two-man crew (Solovyov and Vinogradov),
the 24th to take over permanent occupation of Mir, will be in charge of
performing an intravehicular activity (IVA) inside the depressurized Spektr
module on August 20 to reconnect electric supply cables to restore 70% of
the station's electrical power. An extravehicular activity (EVA) is
planned on September 3 to examine the exterior of the damaged Spektr module.
Possible repair of the breach in the module's hull will be assessed after
this EVA but will most probably be performed by Mir's 25th crew. The
23rd crew (Tsibliyev and Lazutkin) safely returned to Earth on August 14.
NASA's Space Shuttle Atlantis will be launched to Mir on September 27.
She will carry a replacement US crewmember (David Wolf) and logistics
to Mir.

2249. Thee Callsign Database

Newsgroup: rec.radio.amateur.space
Date: 1997-08-17 00:00:00 UTC
From: James Sawle <qmation@dial.pipex.com>
Message-ID: <01bcaaf1$35654200$e8f582c1@default>
Source record: 18215

Hello there,

Is there anyone out there that can help me with collecting callsign databases from around the world for a project that I have been doing for the last three years.

I have at the moment a database of Ham Radio Callsigns from the following areas:

UK about 60-70% complete
Northern USA about 30% complete
Southern USA about 40% complete
Europe about 40% complete
Asia about 20% complete
Australia about 5% complete

This database is in (PC Formatted) dBase 4 format and currently holds over 7.8 Million callsigns, names, addresses, locations, and notes if applicable.

What I am after is more information to enter into this database, If anyone can either e-mail a database with callsign information in dBase 3 or 4, or ASCII Text delimited. so that I can add the information to my database, in return I will send them the database as I have it so far (on CD-ROM), and when hopefully I can get to a stage where I can publish it, which I am aiming at later this year, I will send the the finished article FREE OF CHARGE later this year.

I look forward to hearing from you

All the best

James sawle

Hi fellow ham,

I'm gathering informations on how to work with uo-22. buying an all mode dual band transceiver is very expensive. I'm planning to purchase a transverter for either VHF and UHF. I have a two HF transceiver . One is Icom-721 and kenwood ts-430s. I need transverter which could be use in this HF rigs.
Anybody who could help me what transceiver should i buy. I need the brand and manufacturer.
Hope you could help.

2252. Doppler Shift Math

Newsgroup: rec.radio.amateur.space
Date: 1997-08-17 00:00:00 UTC
From: Christopher Cox <cobox@netexp.net>
Message-ID: <01bcab23$69fc9fe0$6c60b6cd@cbx-nt>
Source record: 18218

What would the equation be to determine the radio frequency Doppler shift expected given a velocity and frequency and atmosphere. I am sure the Air we breath has a velocity factor. :-)

Thanks in advance.

Then might I say in a very mature way that you have a very socialist tone.

I think that the correct capitalist thing to do would be perhaps to let the organization bankrupt itself. I think the remarks being given are very deserved. When you spend money on something or someone that does not deliver, a bad reputation will come of it. Who wants to invest on a loser. 3D maybe a heck of a bird, but it needs wings. They trusted someone who did not come through.

On a subjective note, I would have told the ESA to build there own mass simulator. If they cannot work out the engineering in the first place to hand Amsat for a successful launch, what makes Amsat think they can be trusted at all..... Bad business.....

BTW I am not out any money myself, or if so very little. I joined Amsat but I hardly qualify as a major or minor contributor.

The used to be a satellite schedule that was posted generally every
two weeks on packet called EZSATS. Is that still available, or is the
same data in a similar format available elsewhere?

EZSATS also had the Mir schedule.

2255. Mir's in trouble again

Newsgroup: rec.radio.amateur.space
Date: 1997-08-18 00:00:00 UTC
From: KD1YV <jimkd1yv@eat_spam.and_die.ix.netcom.com>
Message-ID: <33F89297.36B0@eat_spam.and_die.ix.netcom.com>
Source record: 18221

I was about to ask the NG why I didn't hear Mir passes today, but when I logged on, there was a news article from the news feed that the main computer aboard Mir has shut down, and they are flying manually. They have cut power to all non-essential services, so it's a safe bet that includes the ham station.

Do you suppose it's time that they cut their losses and abandon ship?

Alan,

I believe that this is more recent. The new crew arrived last week, but
the problem that I mentioned in my earlier post just occurred this
morning (Monday, 18 AUG 1997.)

SB freqs @ amsat $FREQ08.18
Amateur CW/Voice Satellite Frequencies for August 18, 1997.

BID: $FREQ0818
-----------------------------------------------------------------
Name Mode(s) Frequencies Beacon(s)

AO-10* B Uplink 435.030 - 435.180 CW/LSB
Downlink 145.975 - 145.825 CW/USB 145.810 CW

RS-10/11* A Uplink 145.865 - 145.905 CW/USB
Downlink 29.360 - 29.400 CW/USB 29.357 CW

RS-12/13 KT Uplink 21.210 - 21.250 CW/USB
K Downlink 29.410 - 29.450 CW/USB 29.408 CW
T Downlink 145.910 - 145.950 CW/USB 145.910 CW

RS-15* A Uplink 145.858 - 145.898 CW/USB
Downlink 29.354 - 29.394 CW/USB 29.3525 CW 29.3987 CW

RS-16* A Uplink 145.915 - 145.948 CW/USB 435.504 CW 435.548 CW
Downlink 29.415 - 29.448 CW/USB 29.408 CW 29.451 CW

FO-20 JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

AO-27 J-FM* Uplink 145.850 FM
Downlink 436.792 FM

FO-29* JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

MIR Simplex* Uplink 145.200 FM
Downlink 145.800 FM

Simplex 145.985 FM

SAFEX Repeater(Mir)*
Uplink 435.750 FM subaudible tone 141.3
Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
```

use the satellite if the beacon frequency wavers, or if downlink signals chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse. Excellent reports on this satellite lately.

* Radio Sport-10's beacon, ROBOT and transponder remain silent. Bad news to report regarding the satellite:

Leonid Labutin, UA3CR, responded,
"Yesterday I had meeting with Alex Papkov at GCC. We talked about RS-10 and other problems. He thinks there is 1 - 2% of the possibility to restore RS-10. It will be clear after coming back one good expert in GCC from his vacation. Cross fingers....."

Still no firm information as to what is wrong with the bird and why the problem occured. Let's pray that this report was a 'bad translation' from Russian to English.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite. Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w erp is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

* Radio Sport-16 currently has its Mode A transponder turned off. Andy Mirinov RK3KPK reports that RS-16 "now has a new voice on CW". All beacon reports received by Andy of this latest Russian satellite will be answered by him with a QSL card.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater. Recently a station has been heard sending Packet on this satellite. This is frowned upon and not one of the recommended uses of this satellite.

AO-27 TEPR (Timed Eclipse Power Regulation) States are as follows
As of July 6, 1997
TEPR STATE Time TX Status
---

1 n/a OFF
2 n/a OFF
3 --- OFF

4 21 OFF
5 17 ON at Med Power
6 --- OFF

The TEPR States are defined as follows:

Tepr 1, Started when the satellite Enters the Eclipse
Tepr 2, Started at (tepr 1 time) after the satellite enters the eclipse
Tepr 3, Started at (tepr 1 time) + (tepr 2 time) ...

Tepr 4, Started when the satellite enters the Sun
Tepr 5, Started at (tepr 4 time) after the satellite enters the Sun
Tepr 6, Started at (tepr 4) + (tepr 5) ...

You should note that TEPR states 1,2 and 3 happen during the Night Time passes and TEPR states 4,5 and 6 happen during the Day time passes. These occur during EVERY pass, not just over the U.S.A.

The times assigned to the TEPR states are chosen for the health of the satellite over operation convenience. Therefore, during parts of the year the satellite will turn on late or turn off early as seen by ground stations.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

The latest FO-29 Schedule:

Aug 1 (Fri) 08:17z JD1200
Aug 8 (Fri) 00:30z JD9600
Aug 15 (Fri) 01:08z JA
Aug 22 (Fri) 08:26z JD1200
Aug 29 (Fri) 00:40z JD9600
Sept 5 (Fri) 01:18z JA
Sept 12 (Fri) 00:13z JD1200
Sept 19 (Fri) 00:51z JD9600
Sept 26 (Fri) 08:09z JA

* Mir Simplex - Astronaut Mike Foale has been farily active, making the odd contact with radio amateurs on 2M. Both 145.800 down 0.600 split and the 145.985 simplex have been used. Please do not interrupt QSO's already in progress.

* Mir SAFEX Repeater - Not operational at this time.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

2261. WANTED: 9600 baud mods FT-780R

Newsgroup: rec.radio.amateur.space
Date: 1997-08-19 00:00:00 UTC
From: eb5agv@ctv.es
Message-ID: <872001292.32727@dejanews.com>
Source record: 18129
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.digital.misc,rec.radio.amateur.space

Hello!

As title says, I'm looking for information about using the YAESU FT-780R
at 9600 baud. I want to use it as a receiver for a backup satellite
station, and perhaps for some terrestrial packet working.

Thanks and best regards.

2265. Satallite recption (GOES)

Newsgroup: rec.radio.amateur.space
Date: 1997-08-19 00:00:00 UTC
From: John Glaveskas <gip@dmv.com>
Message-ID: <33F9F83C.334C@dmv.com>
Source record: 18133

Does anyone know where I can fine a design for a Loop Yagi antenna for GOES 8/9 reception. Also can you obtain enough signal with a 3 foot dish from these new sat's.

Thank in andvance.

Source record: 18135

The change in wavelength divided by the emitted wavelength
equals the velocity divided by light speed.

There is also a relativistic correction, but I assume your
source isn't going that fast. Hope this helps.

It might be a blessing in disguise. We do NOT even know if the rocket
will work. The first one did NOT. Whats makes us believe that the
second one will? I would prefer to go on a bird that works!! The idea
of talking to the Russians is a good one. But I guess we may have paid

already to go. If so we wait till they can get us on the next rocket.
It was THEIR mistake that made us miss this bird NOT OUR FAULT.
Or we could sue to reclaim our money and go to the Russians. If we sue
it will be BAD PUBLICITY for the europeans.

> Ken K5MBV

As an avid user of AO-27, i would point out that one conventional transponder will carry alot more traffic than ten AO-27 type satellites. The problem is how to upgrade for a reasonable amount of money. Now, another FM bird or two might be a good thing. And perhaps we'll be lucky enough to have the MIR repeater back if they are successful in recovering solar power from the damaged module on MIR.

I think there may be a very good reason AMSAT is being very quiet about the status of P3D. I've seen that kind of thing happen in other contexts, and it often means that there may be sensitive negotiations going on behind the scenes. That's why city councils and other governmental bodies have to go into closed session to deal with certain issues. So silence at this point may not be a bad thing, and it's MUCH better than an announcement that it won't fly. ESA has been very good to us in the past, and there's no reason to think that they don't want to be that way now. But they are a multi-national organization and the politics, both internal and external, are likely to be quite complex.

I think the point that needs to be made at this point, is how much more beneficial to both organization it would be to deal slightly and fly something real. After all, the problem here is not the fault of either party; it's just something unexpected that came up. It would be truely a shame (and probably not such a good idea from an environmental standpoint) if they flew a block of concrete instead of an amateur satellite as a test payload. But look how much good publicity ESA would get if they flew something real. It would also demonstrate that even the amateurs can deal with the change in vibrations characteristics

on launch and provide additional confidence in their launch vehicle.

Let's cross our fingers (or do whatever rituals you prefer) that this bird will fly (and work) as planned in spite of the last minute complications.

I use LogSat Professional for Windows(http://www.logsat.com), and it's the best satellite tracking program I've ever seen. You can track hundreds of satellites at the same time! With just a couple of clicks you can put the STS and the Mir on the same map and track them.

I see references to a SASI Sat tracker that hooks to a PC parallel port.
Where might I get more info on this device. Is there an interface spec
available if I wanted to build my own interface that is compatable?

Is there a "standard protocol" for sat tracking programs' output?

Thanks for the help -David KF6IB

After a break of almost three years from amateur radio activity, my interest is re-kindling and I am in search of new and interesting fields to explore.

I am aware that there is growing interest in space communications and would very much like to find out more. Unfortunately, after contacting my local club,
none pursued this particular area of interest.

I would greatly appreciate some advice, recommendations or directed reading for pursuit of this topic, and any fields of reseach or projects which may be applicable.

Yours faithfully,

Chris Hull, UK

For the next field-day on 6-7 sept we have a permission to use 150W on
the 160m
Only our new Kenwood TS570 isn't giving that kind of power on 160m

Is anyone know how to modificate the TS570D to have 150W on 160m?

Thanks,

William

Almost any antenna will do to listen, even a whip on an HT or the
telescoping type on some scanners. 2 meter verticles work great as does
discones. Be warned that on the amateur radio frequencies you'll most likely
hear packet the vast majority of the time.

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

SB freqs @ amsat $FREQ08.26
Amateur CW/Voice Satellite Frequencies for August 26, 1997.

BID: $FREQ0826
-----------------------------------------------------------------
Name Mode(s) Frequencies Beacon(s)

AO-10* B Uplink 435.030 - 435.180 CW/LSB
Downlink 145.975 - 145.825 CW/USB 145.810 CC*

RS-10/11* A Uplink 145.865 - 145.905 CW/USB
Downlink 29.360 - 29.400 CW/USB 29.357 CW

RS-12/13 KT Uplink 21.210 - 21.250 CW/USB
K Downlink 29.410 - 29.450 CW/USB 29.408 CW
T Downlink 145.910 - 145.950 CW/USB 145.910 CW

RS-15* A Uplink 145.858 - 145.898 CW/USB
Downlink 29.354 - 29.394 CW/USB 29.3525 CW 29.3987 CW

RS-16* A Uplink 145.915 - 145.948 CW/USB 435.504 CW 435.548 CW
Downlink 29.415 - 29.448 CW/USB 29.408 CW 29.451 CW

FO-20 JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

AO-27 J-FM* Uplink 145.850 FM
Downlink 436.792 FM

FO-29* JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

MIR Simplex* Uplink 145.200 FM
Downlink 145.800 FM

Simplex 145.985 FM

SAFEX Repeater(Mir)*
Uplink 435.750 FM subaudible tone 141.3
Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
```

use the satellite if the beacon frequency wavers, or if downlink signals chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse. *CC = continuous, unmodulated carrier.

* Radio Sport-10's beacon, ROBOT and transponder remain silent. Bad news to report regarding the satellite:

Leonid Labutin, UA3CR, responded,
"Yesterday I had meeting with Alex Papkov at GCC. We talked about RS-10 and other problems. He thinks there is 1 - 2% of the possibility to restore RS-10. It will be clear after coming back one good expert in GCC from his vacation. Cross fingers....."

Still no firm information as to what is wrong with the bird and why the problem occured. Let's pray that this report was a 'bad translation' from Russian to English.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite. Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w erp is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

* Radio Sport-16 currently has its Mode A transponder turned off. Andy Mirinov RK3KPK reports that RS-16 "now has a new voice on CW". All beacon reports received by Andy of this latest Russian satellite will be answered by him with a QSL card.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater. Recently a station has been heard sending Packet on this satellite. This is frowned upon and not one of the recommended uses of this satellite.

AO-27 TEPR (Timed Eclipse Power Regulation) States are as follows
As of July 6, 1997
TEPR STATE Time TX Status
---

1 n/a OFF
2 n/a OFF
3 --- OFF

4 21 OFF
5 17 ON at Med Power
6 --- OFF

The TEPR States are defined as follows:

Tepr 1, Started when the satellite Enters the Eclipse
Tepr 2, Started at (tepr 1 time) after the satellite enters the eclipse
Tepr 3, Started at (tepr 1 time) + (tepr 2 time) ...

Tepr 4, Started when the satellite enters the Sun
Tepr 5, Started at (tepr 4 time) after the satellite enters the Sun
Tepr 6, Started at (tepr 4) + (tepr 5) ...

You should note that TEPR states 1,2 and 3 happen during the Night Time passes and TEPR states 4,5 and 6 happen during the Day time passes. These occur during EVERY pass, not just over the U.S.A.

The times assigned to the TEPR states are chosen for the health of the satellite over operation convenience. Therefore, during parts of the year the satellite will turn on late or turn off early as seen by ground stations.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

The latest FO-29 Schedule:

Aug 22 (Fri) 08:26z JD1200
Aug 29 (Fri) 00:40z JD9600
Sept 5 (Fri) 01:18z JA
Sept 12 (Fri) 00:13z JD1200
Sept 19 (Fri) 00:51z JD9600
Sept 26 (Fri) 08:09z JA

* Mir Simplex - Astronaut Mike Foale has been farily active, making the odd contact with radio amateurs on 2M. Both 145.800 down 0.600 split and the 145.985 simplex have been used. Please do not interrupt QSO's already in progress.

* Mir SAFEX Repeater - Not operational at this time.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

Have you tried to look for webpage from the manufacturer?
Try http://www.rotordoc.com. They used to be C.A.T.S. in Pemberville,
Ohio USA. They may be able to answer questions and supply parts.

121.5 MHz is an internationally recognized emergency comm frequency.
Yes, it is used for ELTs and EPIRBs, but it is also used for other
stuff as well: Example: lost aircraft, military interceptions, lost
comm with Air traffic control, etc...

What did you really hope to accomplish by monitoring 121.5? ELTs
usually have an AM siren sound with modulation duty cycles approaching
100%. Speech is usually much less. Perhaps a circuit for minimum
modulation index might be appropriate?

2291. WISP and TS-790 Problem

Newsgroup: rec.radio.amateur.space
Date: 1997-08-28 00:00:00 UTC
From: kn4cg@vci.net
Message-ID: <5u2kr2$67k@apple.telalink.net>
Source record: 18158

Anyone had a problem using WISP (W95 version) and the Kenwood TS-790A radio?
Mine updates the frequencies on transmit and receive just fine using the
KC tracker/tuner interface. It even sets the proper transmit mode. The
problem is it set the receive or sub receiver mode as AUTO everytime it
updates. Since the radio's AUTO mode selection is not what I want to use
everytime (example UO-22 receive on 435.120 FM but the radio selects USB
as the "proper" mode) does anyone have a cure.
Thanks in advance
Curtis

What your system needs is some intelligent decision making abilities. Right
now the decision is
'Any carrier = alarm'
Given your description of the false alarms, the easy way to solve it would be
'Any carrier longer than 5 sec. = alarm'
You didn't mention anything unique about the water activated mini beacons, so
I assume they are a Continuous Wave (CW) signal. If they have any type of
modulation on then, like an FM tone, you can also use that to make the alarm
decision.

I wanted to be warned when the 2 meter beacon from Hawaii could be heard here
in San Diego to let me know there is a VHF path opening. I took a 2m reciever
and tuned it to the beacon frequency. The squelch was set to a level I felt
the beacon should overcome when it appears. I took the speaker output to a
portable data logger that has some alarming capabilities. The logger was
programmed to pick up the phone line and dial my pager and display "144-170"
if there was any voltage present on the speaker output. For the next two days
I recieved about 10 false alarms. I created an new program for the logger that
had some more intelligence by looking at the speaker output for one minute,
and if the speaker output had any voltage swings for more than 30% of that

past minute, it then will page me. So far I haven't got any false alarms.

I don't know what your skill level is for homebrewing some sort of system to make the decisions, but you can do this (except for the pager part) with a simple Basic Stamp processor, or even a simple R-C type circuit. Either way, with a life saving system like this, test the heck out of it with real life scenarios before you depend on it!

Good luck to you,
-BP

And he _does_ mean reference. There's little real info in the book. Just intros and bibliographies. Good luck chasiing down citations. In fact, unless you've got lots of money and intend to buy everything off the shelf, it's difficult to find the info you need to "work the birds".

I guess I'm at a loss to understand what you're asking for. I found the book very informative as both a reference and a guide in improving both my operating procedures and my station itself. There are some clever ideas described in assembling a station on a budget which I employed successfully. The only thing the book doesn't give you is experience, but that can only be gained by getting on the air and actually trying.

Greg.

2304. Mars Lander Freqs

Hello!

I'm looking for information about how to connect a FT-780R (or a FT-480R) to a PC in order to do automatic doppler correction for satellite use. I would like to know if there is any way to digitally change the frequency (something similar to CAT system). The UP/DOWN system would work if I can send to the transceiver the correct starting frequency.

Thanks and best regards.

I would expect that the weak signals from the Mars lander would not be
within reach of amateur equipment. The following page links to the
type of info that you want.

There are no cures for these false alarms except for pilots to try and land
these large airliners more smoothly.
rough touchdowns are the cause of these alarms. Personally I have never set
one off when I have been out flying however I have heard them go off
myself. They are usually reset by the pilot as soon as the plane comes to a
stop.
If you are hearing allot of them then 1. you must live close to a major
airport or 2. you must live in the mountains.
The transmission range of an ELT is not very far for a ground search crew.
That is why there is air recon first to locate the area.

Yeah, I noticed that problem with the book too. The Wx-satellite book isn't exactly chock full of information either. However, there is plenty of operational information available via e-mail. AMSAT runs two mailing lists, one which distributes Keplerian elements (to enable one to track a satellite), and the other with news and information about the satellites, _including the proper frequencies_.

The AMSAT news referenced below is from Aug 18th. What has happened
since then? Does anyone know? When things were going well, there seemed
to be a lot of self and mutual congratulations in this newsgroup and
elsewhere. Pretty low profile recently.

2319. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1997-09-02 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5ui86b$6m4$1@blackbird.afit.af.mil>
Source record: 18087

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

>unless you've got lots of money and intend to buy everything off the shelf,
>it's difficult to find the info you need to "work the birds".

But there are no other books, and everyone who wants to build everything
himself is bound to have some knowledge and books on RF electronics anyway.
The biggest problems I experience is getting the difficult antenna parts,
such as the glassfiber boom, debugging a brand new X yagi antenna etc.
These things cannot be covered in one book because they are different for
every country, and it will be obsolete anyway by the time it is publised!

I agree with you that Davidoff could have spend more time and space on a
lot of subjects in the book, but it stays as the only introduction to
amateur satellites that I know of (except for chapters in books on
microwaves and VHF/UHF), and it includes a lot of references as well. I
would welcome a better book, but as that would take at least 1000 pages, it
will never come.
73 Johan Dijkhuis, pa3fpj@amsat.org
packet pa3fpj@pi8daz.#twe.nld.eu
PS. And it is easy to read! As a non native speaker and reader of English
books on electronics (I am a student of electronic engineering) I know a
lot of books are not.

:Subject: MIREX 70cm EXP INFO

Mir International Amateur Radio Experiment (MIREX) will be conducting a
test.
MIREX will be switched to the 70cm band on 437.650 FM Simplex world wide
for
extensive 70cm testing. We believe this temporary frequency will an ideal
learning opportunity to verify the impact of 70cm Doppler phenomena on FM
voice and packet operations.

The test will run from September 6, untwide. After the completion of the
test, we will switch the Mir PMS frequency back to the current 2-meter
frequency on September 29th -- OR sooner

If any Questions

==========

Also monitored Mike on 143.620-625, same day, earlier pass.
He will need no more practice for the EVA. He has worked out
getting through the hatch. He is still concerned about how
they are going to pack everthing that they need for the EVA.

Can anybody give me a current listing of the commercial amateur radios being used aboard MIR?

I am giving a short lecture on the space station to a local radio club this coming week, and there will be inquiring minds!

Joel used "British" english when he referred to an ariel.
What he meant was an Antenna (I'm Indian, and we refer to
antennas as ariels back home).

Hello,

I am from california and this is a rather large item(s) so pick up is
Prefered.

I am selling my satellite station to pay for school.

TX/RX
FT-726R: (2m,430,6m,sat unit) (Just serviced at yaesu so A-OK)
With external tone encoder (For mir)
AMPS
Mirage 1010 UHF amp (10watt in =100 out)
Mirage 1070? vhf (I am not sure on the numbers but its 10w -> 70w.)
PRE-AMPS
VHF Lanwheir pre-amp (Very sensitive low noise..they are hard to
find, but it might be worth looking it up for the specs...they
costed about $150 each)

UHF " "

ANTENAS
KLM-435-40CX (40 element circ. polarized beam for uhf)
KLM-2M-22C (22 element circ. poloarized for vhf)

MISC:
-Yaesu 5600 azmuth/elevation rotor (similar to the 5400 but "heavyduty")
-2 30 foot runs of 3/4 inch hardline with conector etc.
-fiberglass cross boom re-inforced with a hardwood dowel
-20 foot tower All the conectors and misc coax needed to hook up the
amps,pre amps, radio and antenias together.
-2 50 foot runs of rotor cable

E-mail me for offers.. I am looking for about $2300 you pay shipping or
pick it up in california (Bishop, ca)

You should be more than capable of figuring this out yourself.

Consider that concrete is about the same colour as the Moon,
and thus probably reflects about the same proportion of the
light that hits it (astronomers says "albedo")...

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Answer: PH3-D was to be replaced with a cement substitute
of the same weight and general shape because the rocket
was found to create more vibrational stress than we were
told. No recent news about the status. Don't know if the
concrete was shipped on time or not. (See "Re: PH3D On The Way
To Kourou?" posts.)

SB SPACE @ ARL $ARLS029
ARLS029 Mir ham operations to shift temporarily to 70 cm

ZCZC AS29
QST de W1AW
Space Bulletin 029 ARLS029
From ARRL Headquarters
Newington, CT September 5, 1997
To all radio amateurs

SB SPACE ARL ARLS029
ARLS029 Mir ham operations to shift temporarily to 70 cm

Starting on or about Saturday, September 6, and continuing no later than September 29, ham radio voice and packet operations aboard the Russian Mir spacecraft will shift from 2 meters to 70 cm. An ''experimental'' worldwide FM simplex frequency of 437.650 MHz will temporarily replace the current 2-meter operating frequencies. Operations will return to 2 meters after the experiment ends. In the meantime, the shift could make it a bit more difficult to work Mir. For starters, power requirements will be higher than on 2 meters--25 W ERP or greater--although contacts using an H-T are not out of the question. Also, some transceivers do not cover the satellite subband (435 to 438 MHz).

The Mir International Amateur Radio EXperiment (MIREX) is conducting the 70 cm test based on suggestions from several Amateur Radio satellite groups who are interested in the feasibility of operating Mir and the International Space Station on 70 cm. MIREX hopes the experiment will determine whether the 70-cm frequency receives interference from the existing commercial VHF equipment on Mir and whether 70-cm operation will interfere with onboard equipment.

More important for simple ground stations, however, is whether they'll be able to compensate for 70-cm Doppler shift on voice or packet. MIREX President Dave Larsen, N6CO, concedes that Doppler will be the biggest challenge for earthbound hams trying to work Mir on 70 cm. The Doppler on 70 cm is plus or minus 10 kHz. Most radios include 5-kHz tuning steps, and to work Mir on voice you will need to get within 3 kHz of the Mir receiver frequency. To work Mir on packet, the frequency error must be less than 2 kHz.

Miles Mann, WF1F, of MIREX reports he talked to Mike Foale, KB5UAC, aboard Mir on 70 cm on Thursday, September 4. Mann was mobile at the time, running 35 W. He reports very good signal quality during the

10-minute pass, which was at close to 60 degrees. Mann said he compensated for Doppler by programming odd-split channels in advance. He reminds users that both the transmit and receive frequencies must change, if you program channels in advance.

Larsen said this week that if the experiment does not work out, ''it will be cut short.'' He said he hopes a filter that could be sent to Mir as early as October will minimize desensing of the 2-meter transceiver by Mir's commercial equipment on 143 MHz.

To comment on the experiment or for more information, contact Dave Larsen, N6CO, doc(at)volcano.net or Miles Mann, WF1F, MilesMann(at)Pictel.com.

I work at the labs of the Portland Cement Association and am intrigued by the thought of a concrete ball in orbit. Is anyone else concerned about lack of burnup and fragmentation on re-entry?

Regarding albedo, concrete can have a wide range of reflectance and color depending on raw mix composition used to manufacture the cement, pyroprocessing conditions, water-cement ratio, aggregates, curing, etc. Color can range from white (>90% reflectance) to buff to dark gray.

I'll keep my hard hat on when this one starts to come down!

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up satellite schedules to contact hams all over the world.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

However, it is considerably smaller than the moon, and also closer
to the earth. So, what is the answer?

The ARRL Letter issued yesterday reported that AMSAT has assembled an international team of project workers to try to get P3D up to the new specifications in time for the launch. The team is working round-the-clock to complete the P3D modifications on time.

The report sounds very optimistic.

I would think that concrete would act (or react) just like a space rock
upon entering the earths atmosphere. In other words it would be mostly
consummed by heat. I say cardboard box sats would be an even better way
to go. they would be cheeper to construct and would burn up 100% on
deorbit.

There is about a factor of three difference in speed between "space
rocks" and low orbit satellites. This would mean a factor of 9 as far
as energy is concerned. Like sizeable portions of Skylab and Salyut 7,
a big piece of it could make it back.

Has anyone tried the Hamtronics APT-2CP Trunstile Antenna for NOAA Satellite antenna. If so let me know how it works. If this is not a good one how about a recomdation. I've tried the crossed dipoles in the Weather Satellite Handbook with mixed results. I will be using a preamp.

Let me know about the antenna at this address!

Thanks
Chuck WD0ASJ

2350. Insurance Update

Newsgroup: rec.radio.amateur.space
Date: 1997-09-07 00:00:00 UTC
From: planning@cyberpromo.com
Message-ID: <3412b9cb.0@nntp1.nac.net>
Source record: 18118

The past year has seen a dramatic reduction in the cost

of term life insurance from many quality companies.

The San Fransisco Chronicle reported, "Price War Creates

Consumer Bargains in Term Life Insurance," and the New

York Times, "Premiums have fallen to record lows."

You may not be aware that your life insurance company

could now be charging new policyholders less than you

are now paying for the same coverage. Your traditional

life insurance agent has access to a small number of

life insurance companies. Through the internet, you

can compare rates to every other policy available.

Our free price comparison service gives you access to

over 550 term policies from over 175 life insurance

companies.

For a free comparison please go to:

2351. Re: Curious about 143.625mhz use by Mir.

Newsgroup: rec.radio.amateur.space
Date: 1997-09-07 00:00:00 UTC
From: "John M. Franke" <j.m.franke@larc.nasa.gov>
Message-ID: <3412C4AF.6511@larc.nasa.gov>
Source record: 18119

The frequency is also used to communicate with NASA's Wallops Island facility. That is the downlink frequency, I forget the uplink frequency in the 130 Mhz portion of the spectrum.
The frequency was at least at one time used to communicate with their tracking and support ships (boats).

2352. SSB vs Landwehr Preamp?

Newsgroup: rec.radio.amateur.space
Date: 1997-09-07 00:00:00 UTC
From: Mike Blanchard <n5kdy@amsat.org>
Message-ID: <3412DC78.F7A5E363@amsat.org>
Source record: 18120

Can anyone compare/contrast the SBB and Landwehr 2m and 70cm pre amps
for use with amateur radio satellites (like AO-10)?

A friend of mine has a IC-821H transceiver and KLM satellite antennas
and found that he needed a pre amp to be able to hear the AO-10
satellite. He purchased a used Landwehr and it seems to work ok. Neither
of us were able to find any specs. for the Landwehr (the original owner
of his pre amp lost all the documentation). I need to purchase a pre amp
and am not sure which unit (SBB vs Landwehr) to select?

2353. Any Mode A activity? Or Mode J CW activity?

Newsgroup: rec.radio.amateur.space
Date: 1997-09-07 00:00:00 UTC
From: hamdan@ix.netcom.com
Message-ID: <5uumnd$8t8@sjx-ixn9.ix.netcom.com>
Source record: 18121

With the apparent demise (or at least, hibernation) of RS-10, are there any satellites in Mode A other than RS-15? I've monitored a pass of RS-15 on a weekend during daytime, and heard no activity. Has everyone gone somewhere else and not told me (why am I always the last to know)? Is RS-16 operational? Is anyone ever going to get on FO-20 on CW?

Nope. They are maintaining silence on the issue which quite
probably means that it is too late to ride on 502.

Sooner or later another ride will come along and P3D will
be in space.

It just isn't going to happen fast enough to make anyone
happy....

Mir's 143.625 is used over the United States to downlink to three NASA tracking stations; Wallops Island, VA, Dryden Flight Research Center, CA, and White Sands Complex, NM. These three stations receive the Mir voice downlink and relay it to Moscow so they can talk with mission control.

They also support the Soyuz TM voice downlink on 121.75 MHz.

The most recent AMSAT news

http://www.amsat.org/amsat/ftp/news/ans250.txt

reiterates previous news articles and things posted to AMSAT-BB, also indicating that much of what which has been posted there have been comments made by individual not necessarily representing AMSAT's position. It indicated that the current conclusion is that P3D and AMSAT's schedules remain incompatible, in spite of intense efforts to prepare P3D for launch. This is discouraging, but as they say in baseball, "It's not over until it's over", and the last inning has yet to be played.

>
> coax. ??????
>

No. You need a capacitor to block DC into the rig. It must be low
impedance
to the RF you are supplying and it must be able to take the power. You
need
to supply the 12V via an effective RFC. The supply end of which should
be
effectively grounded.

If you don't follow all the above - SSB and several others sell one
including
sequencing. It is very easy to do for low power VHF rigs, quite hard at
1500W.

The 9/7 bulletin confirms that P3D will not launch on Ariane 502. It also makes it clear that, as far as AMSAT is concerned, there are no ill feelings towards ESA and in fact they are very appreciative of ESA's committment to amateur launches.

I, for one, am confident that they'll do the right thing, namely, launching P3D at the earliest opportunity. I also think that it just may turn out to be a good thing overall - 502 may fail, and even if it doesn't, it will be a good way to raise our confidence factor in the launcher.

Radio Meteor Observation Bulletin No. 49 September 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Barcelona, Spain (01 59' E, 41 21' N)
Frequency: 48.250 MHz
Transmitter location: most likely Czech television C2 C. Budejovica,
100 kW, horizontal polarisation.
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
Antenna: astronomical azimuth 215 deg (=NE), elevation 0 deg.
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (100 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT and
"Data Capture" software with 9 second/18 sampling interval to store
all the > 1.0 s signal increases.

(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
```

Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. ? probably affected by sporadic-E.
. not so strong Perseid activity as last year (but interesting daytime
observations had to be eliminated due to interference).
. alpha Aurigids at the end of the month.
. local time = UT + 2 hours.

Pierre De Groote / comments by C. Steyaert

--------------------------------------------------------------------------------
Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 3 element Yagi, direction south, elevation 65 deg
Receiver: AR-8000 at 53.7600 MHz, SSB mode.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km,
direction south 2) a 30 kW TV video carrier from Sicilia,
Italy, distance 900 km, south. Both transmitters are on the same
frequency (+/- 10 Hz) and are processed within the same 40 Hz
receiver channel. Several high mountains in transmitter direction
prevent direct and tropospheric reception.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, pictures with interference, sporadic-E, E-layer
```

and FAI propagation are manually rejected.

All meteor counts below are corrected for a full hour observing time. If the recording duration is 20-40 minutes, a dot is shown after the value. Data for less than 20 minutes observing time are not shown here.

Meteor counts of reflections longer than 6.5 seconds: assumed to be overdense.

```

The Perseids maximum on Aug 12-13 is not very explicit in the above counts. I found the maximum to be clearer in the fireball counts, which I have for 2 different channels:

Comparison of the radio fireballs counts for two different directions

Channel "A": two transmitters from Italy, direction south, as described above compared with Channel "C": one transmitter from Germany, northwest, distance about 700 km, recorded at 62.2500 Mhz. Same recording technique as avove. Even these long reflections (fireballs) depend on the specific transmitter-receiver geometry, as the counts for the 2 channels are de-phased.

Only counts of reflection duration longer than 50 seconds are shown here, assumed to be fireballs.

```

Notes:
. blank value means either few or no data available, interference,
sporadic-E, E-layer or FAI propagation, or offline during
thunderstorms and holiday.
. local time conversion: 2 hours ahead of UT (04h00 UTC is 06h00 local)

Werfried Kuneth

Observer: Sadao Okamoto
Location: Damine, Japan (137.53 E, 35.07 N)
Transmitter: JA9BOH/b beacon for RMO (50 W CW 53.7500 MHz)
by JA9BOH Kimio Maegawa
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith.
Location: Sabae city (136.2 E, 35.9 N)
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith

Notes: @xx numbers are converted hourly rate with less than hour data.
nxx numbers are uncertain data due to high noise level.
"--" means lost counts because of high noise level or machine failure.
"e" means lost counts because of Es opening.
Time is JST = 9 + UTC.

I see. So the next possible launch could be with, Who? When?

Next week? Next month? Next year?

It is nice that everyone is civil, is anyone expecting results or is the
project dead.

I would really like to know when I should look at buying back into the hobby. Not being sarcastic, I know it sounds like it, sorry. I already sold the FT-736R, so no big deal for now.

A capacitor feeds RF to the center of the coax at either end (ac couple). An RF choke feeds DC to the center of the coax, while blocking RF at the frequency of interest.

```
C C
signal--)(--------- coax center conductor -----------)(------ signal
| |
| |
[choke] [choke]
| |
| |
dc in/out dc out/in
```

The coax braid stays intact.

>Hi! I am an electronics and information technology student fascinated by satellites, tracking them and monitoring telemetry etc. I would be most grateful if someone could advise me how to start studying this subject as a hobby, e.g. any useful books to r ead and where I may get them from and other support. Thank-you.

Then you'll want to check out http://www.stk.com for your FREE copy of their $10,000.00 Satellite Toolkit. They'll send you a CD with both the Win32 and Unix versions.

Analytical Graphics, the makers of STK, is locked in battle with a company that I used to work for that has a better product (more features, but I'm biased.) so they've lowered the price of STK from $10,000 to absolutely FREE.

Get your copy before they come to their senses... Check it out. If you decide you want something with more features, hit http://www.stacinc.com, STAC's simulator is much more expensive but I think it's worth it. (You get what you pay for.)

> for use with amateur radio satellites (like AO-10)?
>

I have one of each. One for 2m from Landwehr and one from SSB for 70cm. Both
are very good. You will find the power handling of the SSB is higher. I think you
may also find the noise figure lower, but I doubt it makes any
difference on 2m and only a marginal difference on 70cm.

A clear advantage of the SSB unit is that it is powered up the coax - like pre-amps
should be and is therefore easy to drive with ICOM rigs like the
275/475. The
Landwher seems to use better relays on 70cms but SSB often use unusual
configurations with matching and phasing to increase the performance.

Neither will mange more than 350W on 70cm, but you should not be using
so much uplink power in any case!

Hello Mike....Could you tell me what you paid for Landwehr & SSB pre amps?
Two meter and 70cm...I have several of the Landwehr's myself and have heard good reports about the SSB pre amps.....73 and thanks

Cant compare them for you, but I have two SSB preamps, one for 2m and
one for 70cm. I just bought them three weeks ago. Im using them with
an ICOM 821H successfully, allowing voltage to be supplied across the
100 ft. of coax I have. I paid $250 for each of them new and am a very
satisfied customer!

I have been using the 2 meter one for AO-10 too.

If anyone has specific questions, just write me at: catman@codem.com
(The address above is bogus). I would be happy to answer specifics.

I would like to know how to power a 12vdc preamp via the coax, is it a simple as placing a .1 microfarad cap on the center conductor of the coax therefore blocking dc to the receiver and then feeding 12 volts up the coax. ??????

I hope someone has the answer, thanks in advance

From: mbv@ti.com
Message-ID: <5v3qm2$s6c$1@tilde.csc.ti.com>
Source record: 18037

The recent ANS Bulletin 208.01 complained that comments
made to public forums such as newsgroups and magazines that
were made by someone other than AMSAT NA did not represent
the opinions of AMSAT. Futher we should be careful of what
we say about ESA and the delays in order not to jeapordize
negotiations.
I'll be careful of what I say, but I will not avoid voicing
my opinions. AMSAT may not be representing me either. We contributed
dollars to the project, without which there would be *no* P3D!
What is being negotiated? We want some feedback. When things were
going well there was a great deal of patting themselves on the back
in public forums. If they can't stand discussion, then they should
get the job done, or we will start putting on the pressure for a new
representation.

Hi

I have used them all..the best is probably a quadrifilar helix. But as a Ham, you may want to consider the M2 Eggbeater. It does a superb job on weather sats and allows you a fine antenna for 2 meter ssb or mode a satellite work!

check out this web site for lots of weather sat info:

2372. Wanted: back issues of Satellite Times magazine

Newsgroup: rec.radio.amateur.space
Date: 1997-09-09 00:00:00 UTC
From: dhrnsn@ptd.net
Message-ID: <5v4do3$6cj$1@news1.ptd.net>
Source record: 18040

I'm looking to buy back issues of "Satellite Times" magazine.

I understand Grove Enterprises has a limited supply of back issues,
but was hoping someone here may have a set they'd like to sell.

I need any and all between Volume 1-#1, and Volume 3-#4.

Thanks,

David Hirneisen/N3GKB
Lititz, Pennsylvania
dhrnsn@ptd.net

2373. Hamfest Sunday 21 Sep, Newtown, CT

Newsgroup: rec.radio.amateur.space
Date: 1997-09-09 00:00:00 UTC
From: KD1YV <jimkd1yv@ix.netcom.com>
Message-ID: <3415E637.5B3D@ix.netcom.com>

2374. NORAD Two-Line Orbital Element Sets (TLE059)

Newsgroup: rec.radio.amateur.space
Date: 1997-09-09 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5v4cqo$2ud$1@blackbird.afit.af.mil>
Source record: 18042

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

how about a giant mylar balloon! about the size of a zeppelinn ore
something. It might even reflect radio waves and we could all bounce off
of it.
I heard there were satellites like this at one time, polar orbits and
the like, but eventually they all popped.

2377. TRAKBOX Problem/Question

Newsgroup: rec.radio.amateur.space
Date: 1997-09-10 00:00:00 UTC
From: Art Jeyes <chrishil@erols.com>
Message-ID: <3416794D.3B85@erols.com>
Source record: 18045

I have a TRAKBOX and am using it with an ICOM 970 to control tuning via the CAT port. I have been having very poor performance of the CAT interface (about 1 command in 5 makes it to the ICOM and is decoded and acted upon). I am using the TTL output form the TRAKBOX to avoid having to buy an ICOM CT-17 level converter. The cable from the TRAKBOX to the ICOM is short and shielded with the shield tied to ground.

A scope on the TRAKBOX output line (TTL) shows no noise and a peak signal of 4.1 VDC. Everything looks like it should work. I have everything (power supply, TRAKBOX and IC-970) grounded to a common point with short ground wires.

I borrowed a CT 17 and hooked up to the RS-232 output of the TRAKBOX and everything works fine. Every command gets received and acted upon by the IC-970.

Any ideas or should I just go out and get an ICOM CT-17 level converter?

Thanks and 73

Art Jeyes -- AA3GU

2378. Baseline Interferometers

I am heading a up a project @ TAMU-Commerce of building a seven dish baseline interferometer. any ideas or helpful hints on interferometry. we are using comercial grade 1.6 meter dishes to make up the array as well as comercial recievers, we are however using a graduate students phased array A/D converter project for our A/D. By commercial equipment i mean to say we are using satellite dishes used to recieve satellite signals for movie down links, basically it's the systems used in hotels for the pay per view movies.

Wasnt that called ECHO about 40 twars ago? I thought about that as a means to get 70 CM rf to a ballon. Now where do you get RF reflective ballons in a size to use as a target? Might be kinda neat on field day....

I see. So the next possible launch could be with, Who? When?

Next week? Next month? Next year?

It is nice that everyone is civil, is anyone expecting results or is the project dead.

I would really like to know when I should look at buying back into the hobby. Not being sarcastic, I know it sounds like it, sorry. I already sold the FT-736R, so no big deal for now.

If ESA launches a piece of concrete in place of P3D would that not be a danger to people on the earth when it comes down? Would it be a danger to spacecraft? Would it be in the same orbit as P3D ... can't seem possible to me. P3D would have booster rockets to put it into the correct orbit. A piece of concrete just goes where it wants to go.

For complete information, visit: http//www.sparksintl.com

If you had told me a year ago that I would
be marketing a product that claims it will
remove two inches of fat in 24 hours,
I would have laughed.

"It sounds like snake oil," I would have told
you. "I wouldn't be involved with anything
that ridiculous."

...So much for predicting the future.

HERE'S WHAT CHANGED MY MIND:

Last December, I pushed my doubts aside
and tested the gel on my own "fat-prone
areas" -- stomach, hips, and thighs.
What happened just 24 hours later turned
me, an avowed skeptic, into a wide-eyed
believer. I lost 2-1/2" from my waist,
2-1/2" from my hips, and 3-1/2" from each
thigh -- overnight. I couldn't argue with
my tape measure or the way my painfully
tight jeans were suddenly comfortable.
My husband lost two inches from his worst
area -- his stomach. My mother-in-law
lost 1-1/2" from her stomach, and her problem
was a little bit of flabby skin, not serious
excess fat.

Now my company is marketing this miraculous
product around the world. And we're looking
for serious, motivated people who would enjoy
making terrific money while they sell a reliable
product that delivers results.

HOW OUR PRODUCT COMPARES TO OTHER PRODUCTS ON
THE MARKET...

1. It removes excess fat immediately, within
24 hours. You don't have to wait weeks or months
for it to work as you do with some "body contouring"
products on the market.

2. It liquefies fat naturally with common, European
herbs that have been used safely for centuries; the

fat is then eliminated by the body naturally thru
urination.

3. It's 100% safe, 100% herbal,
100% hypo-allergenic.

4. Quick and easy to use, it takes less than
an hour to apply.

5. No side effects, no after-effects, no strange
sensations - just great results!

6. It can be used repeatedly to lose multiple
inches and maintain the fat loss over months,
even years.

7. Affordable even for people on a budget.

Philip, I don't know about a better job, but I believe
someone should do a different job of informing the members
about finances, negotiations, and launch delays. There
is no practical method to input members guidance. Public
discussion seems to be discouraged unless it is
only to offer congratulations.

I have no plans to attend the meeting, but might be
able to afford it when the time comes.

How do the board members pay their travel and other
expenses when performing AMSAT chores? Do they travel
first class? (This jetsetting is out of my league. I have
to work for a living.) How about you? Can you do a better
job? Are you available for nomination?

The project is not dead, and P3D is not about to become the latest display
at the National Air and Space Museum.

If Ariane 502 is successful, we can expect to see 503 fly within 6 months.
If 502 is not successful, then we didn't want to be on it anyway. Given that
Ariane 5 has a total of 37 seconds of flight experience, I for one will
breathe easier if we go on a later flight, with one successful flight already
on the record books. If we fly on 502, I might need to be sedated as the
countdown reaches zero.....

No guarantee that ESA will put P3D on 503 of course, but they do acknowledge
that their last minute change in vibration specs is the reason why Amsat
does not have P3D ready for flight. It is simply not reasonable to ask ESA
to delay a billion dollar project to accomodate a million dollar passenger.
They feel a political need to get 502 launched before the end of their
accounting year. I expect that they will find room for us on a future
flight, even if the launch contract did not provide for this particular
contingency.

Amsat in general (and Amsat-DL in particular) has had an excellent
relationship with ESA in the past. Consider that when our satellite is
fueled for launch, it will contain almost 200 kilograms of explosive and
toxic rocket fuel. The fact that ESA allows an amateur group to fly a
"homemade" satellite loaded with dangerous fuel on top of their precious
rocket says a lot about their opinion of Amsat. And we have done the same
thing twice before with AO-10 and AO-13. I don't know of any US launch
company that would allow us to do that.

I know you guys have a lot of money tied up in P3D (as I do), but launching a satellite is quite different from ordering a FT-736R from some ham radio dealer. You can't call them up and say "I sent you my money, where is my satellite?" The satellite will fly when ESA and Amsat are ready to fly. We are pioneers living on the frontier of ham radio and the amateur space movement. We have to expect that there will be some rough spots on the frontier.

To be totally safe, postpone buying equipment until after the bird is safely in orbit. The ham manufacturers have designs for P3D friendly gear on their drawing boards (does anyone still use drawing boards?), and they are waiting to put the new gear into production after P3D is safely in orbit. So waiting until after launch will probably give you a wider selection. And if you are starting from scratch, don't automatically go with Mode B just because that was used in the past. Consider operating through P3D on the higher frequency bands, where antennas are smaller.

Dan Schultz N8FGV

Great response Dan. You write with authority and
appear to have some inside knowledge of both AMSAT
and the Amateur radio equipment industry. Do you
know for a fact that equipment manufacturers have
equipment on the "drawing board" for P3D operations?
Do you have information on P3D launch that isn't
available on the net? If so,can you tell us if the
concrete was delivered on time and what the latest
launch vehicle negotiations have yielded in the way
of promises or actual results?
Information seems to have become unavailable shortly
after it was disclosed that P3D would have to be replaced
by the substitute. AMSAT NA has scolded those who would
discuss the issue in print without their sanction in the
latest AMSAT bulletin. AMSAT volunteers and board members
have worked very hard and deserve credit for their efforts,
but also need to be reminded who is paying their expenses
if they don't keep us informed of what is happening with
the P3D project.

This probably isn't much help, I am using the ttl with a trackbox and an
Icom 821H without any trouble. I did sometimes have problems with ttl
and the yaesu 736 with miss interperted commands. At times it would key
the radio up and stay there until i reste it. Not a good idea. I did buy
the interface from Icom for my radio but not using it.
Sorry not much help.

Remember that the 503 is supposed to be the first "commercial" launch of
an Ariane 5, and that it is already fully manifested with commercial
birds at this point. Of course this could change if the 502
fizzles...then we could theoretically get on 503, if Arianespace is
willing....still a lot of "ifs" and relying on the goodwill of
ESA....Sure hope we don't have the biggest amateur white elephant in
history...

Yes, and since our planners cannot (or will not) tell us what the
operational scenario will be after launch, we cannot possibly prepare for
ANY operations, without spending an inordinately large amount of money.

While I have been a member of AMSAT for many years, it is truly a tool
without a handle - there are techies doing things that they want to do
without any control from the vast majority of operators and amateur ops.
There is NO marketing sense in the organization.

I 'll remain a member, but there are serious problems with the leadership.

I don't mean to give anyone the impression that I speak for Amsat or
that I have any inside information. It is possible that I am wrong and
that ESA will consider the terms of the launch contract to be fulfilled
after launching the concrete block, but my analysis of past performance tells
me that they will make good for us when it is feasible. ESA has much
bigger things to worry about than whether or not P3D is onboard 502. They
are under political pressure to make the September 30 launch date, that
can be ascertained from articles in Space News and Aviation Week and is not
based on inside information. There may also still be technical problems that
might delay 502 enough that P3D could still fly on that vehicle, nothing
is certain until they light the fuse. Dr Karl Meizner of Amsat DL is
handling the negotiations with ESA, he is probably the only person who
knows the current status, and I assume that he will tell the rest of us
when he has something to report. Whether or not P3D would fly on 503 will
depend on what other payloads are on that flight. ESA considers 503 to
be a development flight also, and they have offered a possible cut rate
launch to their commercial customers, one of whom might be "brave" enough
to take the risk. This will probably be decided after 502 has flown, so
I do not expect any news about the 503 payload to be announced before then.

I do not "know for a fact" that the big equipment manufacturers have new gear on the drawing boards, that is more of the second hand rumor department and perhaps I should have labeled it as such. I do know that Downeast Microwave is redesigning their line of kits for P3D, they say as much in their catalog. The higher frequency bands on P3D will be experimenter's territory for a year or two after launch, but that will quickly change when the appliance operators learn of the advantages of working the higher frequencies and the manufacturers see that there is a market. Consumer microwave technology is already widely available and cheap, consider the low cost cell phones, GPS receivers, and direct broadcast satellite dishes that are on the market. Microwaves are not some kind of black magic as many hams still assume. P3D will make the microwave bands almost as common as 2 meters, and just in time too, before our bands are auctioned off to the commercial market due to lack of use by amateurs. You can certainly go out and buy mode B gear off the shelf if you have a burning desire to work P3D from day one, but I don't think that new satellite operators should automatically go that route. Mode B is on P3D to accomodate those who already own the equipment so that it will remain usable with the new satellite. People who don't own current satellite stations should (in my humble opinion) wait until after launch before making major purchases, unless they find a good deal on used mode B gear at the local hamfest.

I agree with you that Amsat could do a better job of keeping the general membership informed on what is happening. They do sometimes drop the ball on that.

Or start homebrewing now and be ready when it launches. Even if you can't hack RF design/construction ('still looking for an Elmer myself), you might think about suitable antennas and/or hardware/software to control their operation. (Although, one of the neat things is that they say that one may be able to point an suitably high gain antenna at a fixed point in the sky and get a decent amount of operating time [probably alot more than a LEO bird, i suspect] because of the new orbit they are planning to use.) Let us know what you come up with!

Hi all,

Can't believe you don't know a word about KLM preamplifiers! They are made in USofA!

I bought an SSB Electronic SP-70 UHF preamp almost five years ago. After a couple of months it came in trouble with their switching relays (it is a mast mount unit after all). In fact, one of this contacts was unusable in rain or wet weather. The first time happened this problem, I thought the preamp was blown by my transceiver, but after the rain ceased and sun begun to heat again,the problem dissapeared.

But I discovered the KLM preamps and I believe they are at least so good that those SSB or Landwehr units, comparing gain (intermod is strong for the SSB SP-70). No problems in another 3 year of mast mount use for both KP2, 144 and 440 models.

Best,

But you *can* prepare. Become familiar with microwave operations. Optimize your IF rigs. Make some educated guesses on what modes will be most effective (Config L/S looks good), and while waiting for P3D to get up there, recrystal your toys and make some terrestrial racket on 1296 and 2304 MHz - bands that could really use some usage. You could build a Config L/S station on top of a Mode B station, since 2m and 70cm are dandy IFs. Hedge your bets, plan contingencies, and have fun...

I don't see you on the presentation schedule for the Symposium in Toronto. If you have a better way, why not tell us about it? I will be sharing my thoughts on microwaves for dummies (having used myself as a test subject) Friday morning at 1140...

Ken,

I have watched your tirades in silence for some time and the time has come for me to comment.

Have you ever been to Orlando to help in the lab? Do you go out to hamfests and club meetings and spread the word about satellites? Or do you just sit on your dead butt and bitch while others do the work? No one in AMSAT gets paid and I assure you the folks down at the lab put in many long hours of hard work.

In your last comment you say "we will start putting on the pressure", who are "we" do you have a mouse in your pocket? You sure as Hell don't represent me.

If fairness I'll tell you what I have done in the past year. I've been to the lab to help out 4 times (BTW I live in New Mexico not Orlando). I have been to 20 hamfests or club meetings. I have covered more than 25000 miles giving demos and talks or working AMSAT tables at hamfests. Since I've been to Orlando and seen first hand the effort and I have no issue with the folks working on the bird, perhaps you should not either. They are dedicated and hard working, very experienced and doing it all for nothing.

ESA has been a good friend to AMSAT for many years putting us in orbit for little or nothing compared to commercial launch prices. It would serve all of us well if you would learn a little bit before pontificating more.

Then explain why the UN (United Nations) has jurisdiction over
antarctica? That is an international preserve for the study of nature
and all laws and treaties stipulated to do apply.

I dare say, I think your foot just intercepted your mouth on this one.
Better get some gold bond for your gums.

The reason the UN has jurisdiction over Antartica is only because they say they do and there are no citizens of Antartica to disagree with them.
Go to Antartica, start your own country, and tell the UN to take a hike through the glaciers, dont forget your own army though.
;')

>ANY operations, without spending an inordinately large amount of money.

Speaking only for myself, I think the only honest answer that anyone can give at this point is "We don't know what the schedule will be". What schedule will people want to have?

All I can offer is some WILD GUESSES, for whatever they are worth:

In the beginning I would guess that Mode U/V (UHF up/VHF down, same thing as the old mode B on earlier satellites) will be on quite a lot, since there are many stations equipped for AO-13 that will want to pick up where they left off after AO-13's reentry. Gradually there will be more and more users on the higher bands and they will eventually outnumber the Mode U/V users. There should be enough power to run two transmitters at the same time, at least in the early years. Since the S band transmitters are supposed to be highly efficient (and there are two of them), one of them will probably be on most of the time, the other transmitter will be either the 70cm or 2 meter transmitter, but probably not both at the same time. The X band (10 GHz) and Ka band (24 GHz) transmitters will probably remain experimenter's modes
with limited operating time, similar to the schedule for mode S on AO-13. As the spacecraft ages, eventually the solar array output will fall off to the point where only one transmitter can be on at a time. The less popular modes will probably get less operating time when that day comes. Mode U/V may be a less popular mode in the future than it is today, and it may be cut back at that time in favor of higher frequency modes.

My WILD GUESS is that 1269 MHz up and 2400 MHz down will be a popular mode, along with Mode U/V. The other bands will operate on a limited schedule. I could be wrong about 10 GHz, it might take off and become very popular depending on what commercial gear becomes available. The IF matrix is designed so that any receiver can be connected to any transmitter, so there is some flexibility in scheduling uplink and downlink resources. This flexibility is the basic reason why we can't tell you what the operating schedule will be, because we simply don't know at this point in time what people will want at some future time.

There may also be technical constraints in regards to power budget and solar array illumination, most of which can't be known until we see what kind of orbit we are in. But I would guess that the schedule will be set by the number of users on each mode, which will ultimately be determined by the

availability and cost of commercially manufactured equipment for each mode.

The digital modes on RUDAK are another can or worms. We need to dedicate some of the resources for existing packet formats, while also providing resources for experimenters to develop new digital modes.

>While I have been a member of AMSAT for many years, it is truly a tool
>without a handle - there are techies doing things that they want to do
>without any control from the vast majority of operators and amateur ops.
>There is NO marketing sense in the organization.

I don't think there needs to be a conflict between "techies" and "operators". The "techies" need to experiment with new modes which will eventually be adopted by the "operators" once they see that the newer modes are better than what they have now. Techies generally don't respond well to control, they will do what they think is important regardless of what anyone else wants from them. Which is sort of how most inventors work. Nobody told Edison to invent the phonograph, nobody even knew that they needed one until Edison offered it for sale. While you may think that the techies are just playing around with esoteric technologies for their own amusement, remember that most of today's "popular" modes in amateur radio (including FM, Single Sideband, and Packet) started out as some specialized techie plaything.

Sorry for the obscure reference in the subject line but it's an old
military statment to see who is still awake and listening.

basically is there anyone who can see my postings? I have had trouble in
the past, where i could see mine and others but no one saw my posts.

secondly can no one help me with my question that i posted on baseline
intereferometry? Even a steer in the right direction would be appreciated,
a book reference would be acceptable as well as any individuals.

You are correct, I don't expect that I would ever be able to
represent you. I do however respect your opinion and right to
speak what you think. I also respect your efforts to promote
AMSAT and the hobby. The issue is communication between the
AMSAT board and the public, not what I have done or how much
you have done. I apologize if I haven't been able to make that
clear and have come across as complaining in general. In the
future I will try to be more specific.
Keep up the good work.

Well said. It would cost us about $50,000,000 to pay for a commercial
launch.

Sorry! You need a license from either your home country or the country
which is sponsering the area of Antartica you are operating from or the
host country(USA or Russia) for space operation. Unless you catch a lift
from France or Japan on one of their launch vehicles.

2420. FTV=WEFAX,FAX,SSTV,RTTY,CW with SoundBlaster

Newsgroup: rec.radio.amateur.space
Date: 1997-09-14 00:00:00 UTC
From: "Brian E. Cauchi" <briane@geocities.com>
Message-ID: <5vggo7$m2c@news.keyworld.net>
Source record: 17988
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.scanner,rec.radio.shortwave

FTV (now in Version 1.0)can be used to receive images from Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from radio
telex services, Morse code, as well as Amateur Radio FAX, SSTV, RTTY and CW
signals. It can also transmit Amateur Radio FAX and SSTV. No external
hardware, other than a radio, is required, as all the necessary signal
processing is implemented in software. The main features include:

WEFAX, FAX, SSTV, colour SSTV, RTTY and CW operation.
Transmits 6 FAX modes, 8 monochrome SSTV modes, 10 colour SSTV modes.
FAX operation supports APT signal recognition and scheduled reception.
No external decoder or converter box is required.
Signal analysis is provided on all modes.
Many parameters are adjustable while receiving.
Full recovery from wrong mode settings is possible.
Program works in real time (about 1 second 'DSP' time lag)

1000 Plus Free sites, and search engines. where you can put your business ads, or Personal ads, free you can't beat that deal. You ask how can this guy have the time to do this. Well most of you know the Internet, you now that you can actuality trip over these sites, but they are time consuming. Well I'm a disabled Vet, I do have the time to do this. I have spent a couple of mouths, 10 hour days looking, tripping over them, hunting them down, my computer friends word of mouth, and a lot of you guys know how it happens. You go to one free site, to add your web address, and you run into a hundred Plus more free sites. You Know. Any ways I spent a lot of time looking for these site. But that's not all I found. Look at this. of course, (1) Free Classified add sites, (2)Yellow Pages List your site free, (3) Free links, (4)Search Engines free Listings, (5) Web Page Publishers & Promoters, (6) Low Cost Classified Sites (7)Newspapers & E-Zines on the web, (8) List of Cyber Malls, (9) If you want to Accept Credit Cards? I'll show you where to go. (10) Looking for Venture Capital? (11) Bulk E-Mail Companies, Hey NO SPAM, pick the ones that have targeted E-Mail, (12) Business Associations Online, (13) Free Multi Site Submission Services, (14) Marketing & Advertising Resources. Remember I did say Free. All I ask is, Hey you guys come on wait a minute, I don't know about you guys, but I can't afford those adverting Company's, and Christmas is right around the corner, and I refuse to spam! if you can afford the big Company's advertising prices, well thank God for your blessings. I can't, and I do have my family to think of.. So if you would please can go to my web site, to down load this free information, I would be Grateful also your are under no Obligation to buy anything. I also know that some people don't like to down load, so if you like, I can sent you a 3 1/2 inch floppy Just sent $3 Dollars for US priority mail and $1 for my time and the floppy.

Thank you. George R. Corona owner of Georgina's Indian Market.

2424. How can I reach Norm Thagard? I need QSL for his mission

Newsgroup: rec.radio.amateur.space
Date: 1997-09-15 00:00:00 UTC
From: Ricky Ponder <*kc4kin@geocities.com>
Message-ID: <341DC030.2C810FF2@geocities.com>
Source record: 17992

September 15, 1997

Does anyone know how I can get in touch with Norm Thagard? Or someone
at NASA who will respond to my QSL request for his mission. I spoke
to him on 3 different occasions during his MIR stint.

3/30 15:18 UTC
4/1 06:52 UTC
5/6 16:24 UTC

Frequency 145.550

I sent for a QSL to the following and never received anything.

Norm Thagard
Mail Code CB
Johnson Space Center
TX, 77058

I've also emailed serveral people at different NASA addresses and
never get a reply. Any suggestions on how I can get a QSL for these
contacts would be greatly appreciated. I have a recording of one
of the contacts, I transformed it into a Real Audio file. If you
would like to hear it go to:

http://www.geocities.com/~kc4kin/r0mir.ra

Thanks in advance for any help

email: kc4kin@geocities.com

Attention: The e-mail address in the header is bogus
to help prevent SPAM in my mailbox. If you want to
reply send email to: kc4kin@geocities.com

2426. Re: P3D report from GB2RS

Newsgroup: rec.radio.amateur.space
Date: 1997-09-15 00:00:00 UTC
From: John Mock - KD6PAG <kd6pag@nospam.qsl.net>
Message-ID: <341DF7EA.732@nospam.qsl.net>
Source record: 17994

Here's an unofficial report confirming that P3D will not fly on Ariane 502. I consider cancellation by mutual consent to be good news, and a sensible choice by both parties given the unforseen circumstances. I am especially pleased with ESA's cooperativeness, both with respect to the contract, past flights, and their apparent willingness to consider future launches. It may be frustrating to some, but i'm sure the outcome could have been much worse.

From: "Dave {Reply address in.sig}" <noone@llondel.demon.co.uk>
To: radio-info@ucsd.edu
Subject: GB2RS News 14th September 1997
Date: Mon, 15 Sep 97 20:01:56 GMT
Message-ID: <874378916snx@llondel.demon.co.uk>

Good morning / evening. It's Sunday the 14th of September [1997] and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Ron Broadbent, G3AAJ, of AMSAT-UK, reports that the Phase 3D satellite will not now be on the Ariane 502 rocket, due for launch on the 30th of September. The Phase 3D contract with ESA, the European Space Agency, has been cancelled by mutual consent and the launch of Phase 3D is now being renegotiated with ESA and various other launch agencies. At the moment, options are very fluid, with the possibility of a launch in five or six months time.

...

*** Transmit without license !! It's possible !!***

Not a problem at 1750 KHz. People do it all the time. In the States,
you can do 10W (if i recall correctly) but your transmitting antenna
is limited in size. But your *receive* antenna can be as big as you
have real estate for. Check a recent ARRL Handbook if you want to
build a 'Lowfer' rig.

everything is possible in Antarctica !!

You may transmit something in U.S. military band as well !!

U.S. does not have any jurisdiction over Antarctica !!

I strongly suggest you not to do this !!
I hope you are not going to be kicked out of your country !!

Keplerian bulletins are transmitted twice weekly from W1AW.
The next scheduled transmission of these data will be Saturday,
September 20, 1997, at 2230z on Baudot and AMTOR.

2431. NORAD Two-Line Orbital Element Sets (TLE063)

Newsgroup: rec.radio.amateur.space
Date: 1997-09-16 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5vn1nc$t2r$1@blackbird.afit.af.mil>
Source record: 17999

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

hi to all,
William F. Hagen kc6ufe, I would like to open a discussion on
moonbounce, such as who is doing it, what kind of power, antennas,
clubs, nets, freqs, etc. I am interested, possibly in participating, and
would eventually like to see a 2m repeater on the moon.
Glad to participate here.

I once collected and cataloged shareware available on the
Internet and came up with a compressed (zip) collection of
programs and information in about 25 or so categories.

Below are listed directories in which this material was divided,
each containing about 1Mb (compressed) of materials.

Being compressed (zip) this is a substantial collection and it
is now available all in one place.

You should be able to access this through your web browser and
I have included a link on my home page (near the bottom):
http://www.qsl.net/k7on/index.htm

Hopefully, there is something of use to about everyone in there.

From: kcc@westworld.com
Message-ID: <341f929f.56851818@news.wgn.net>
Source record: 18003

I am working on the communications and navigations subsytem of my sailboat. I am interested in providing to my associates state side my location via APRS. I am not opposed to doing standard packet and possible SSB connection, but not important if I can get through via APRS.

So considering that I don't have a lot of space for antennas, how will I be able to pull this off? Also, I would be interested in hearing any recommendations on equipment... Remember that space and power is at a premium. Please e-mail any responses...

Ummh, there was a very informative series of articles in the recent issues of the german CQ-DL (our equivalent to your QST) covering all aspects of the P3D sattelite. The last article told about the most-likely-to-become-standard up- and downlink modes. It seems that there has to be done quite some experimentation to evaluate the quality of the links and which modes to chose. The author was honest enought to tell that he isn't able to tell anything in detail at the moment and that no one should hurry out and buy some equipment now. The one or other bands have more or less likelyhood to become up- or downlink paths, but nothing is written in stone yet.

Maybe for use *on* the Moon, but 2m would be a bad frequency
choice for a lunar repeater to be used *from* Earth. If we could place
a repeater on the Moon (and I'd love to see that happen), it should be
at least at S band, and probably better at Ku band.

A 3m dish should do for either end of the link with a Ku band frame
regenerating repeater incorporating good hybrid FEC located on the
Moon. Using either TDMA or CDMA technique, that should allow
multiple digital voice QSOs via the lunar repeater simultaneously.
(Such a repeater would see half of Earth at any given time, so
making it single user would be very undesirable, and an analog
transponder wouldn't have sufficient margin at that distance without
a very large antenna.)

Dears friends
The 440 side of my Icom IC-970/H is having a problem. The readout will go blank, will not trans. or recive. When you key the mic, the readout comes on , but she doesn't trans or recive. About five seconds after I unkey the readout goes blank again .
Now this is not all the time. She comes and goes working great half the time . Two meter side hasn't acted up at all .

Help , has anybody had any of the same ?

Thank`s

Vicenso

You should have no problems running Icom radios with the Trakbox using TTL. I run the IC-475 and 275 in that manner. Been a while but I seem to remember that there was a "gotcha" on the hardware setup to do so - can not remember as it has been a while.

Will have to go back through my notes. Let me know if you still need the info, as I have the trakbox out to upgrade the EPROm this weekend so I can do some checking for you.

2449. ESA press release re Ariane 502

Newsgroup: rec.radio.amateur.space
Date: 1997-09-19 00:00:00 UTC
From: sw
Message-ID: <5vu3i5$gha@cs1.FTA-Berlin.de>
Source record: 18017

Looking at the ongoing discussion about P3D and ESA, I thought the following
press release might be of interest:

==========
From: MAILRP@ESA.HQ.ESA.FR
Subject: Relations, Esa Public Press Release Nr.28-97 - ARIANE 5
Date: Thu, 18 Sep 1997 07:52:59 MET
Organization: Space

No. 28-97, Paris, 17 September 1997

JOINT ESA/CNES PRESS RELEASE

ARIANE 502 - Launch preparations

Preparations for the second Ariane-5 qualification flight
(A502) are going ahead simultaneously at the Ariane
5 launch complex (ELA-3) at the Guiana Space Centre,
Europe's spaceport in Kourou in French Guiana, and at the
main industrial sites in Europe.

The launcher preparation campaign began on 16 June in
Guiana (see ESA/CNES press release of the same date) and is
proceeding satisfactorily. The data output from the Launcher
Countdown Rehearsal, which took place on 5 September, has
now been analysed and the results are correct and in
accordance with predictions.

However, in line with the overriding concern for rigour and
achievement of maximum reliability on this second flight,
additional studies and tests at launcher system level and below
have proven necessary. While these have now almost all been
completed with satisfactory results, some checks relating to
analysis of the launcher's dynamic behaviour have yet to be
completed.

It will not therefore be possible to announce a new target date
for the launch - previously scheduled to take place on or soon
after 30 September 1997 - until 25 September at the earliest,
when the final steps in the launch campaign have been
finalised.

Hello all,

I am looking for an _affordable_ 2M all-mode (SSB-CW-FM). I used to
have an Icom IC290H that I would like to find again. Please, no dual
band satellite radios, I can't afford one, yet!

Please email me at: k3tz@nauticom.net

Also, would you consider a trade for a mint condition Icom IC281H?

Thanks for reading & 73,
Tim

2455. ICOM IC-970/H FAILURE

Newsgroup: rec.radio.amateur.space
Date: 1997-09-19 00:00:00 UTC
From: Geko <geko@redestb.es>
Message-ID: <5vtfb1lld1@talia.mad.ibernet.es>
Source record: 18023

The 440 side of my Icom IC-970 is having a problem. The readout will go
blank, will not trans. or recive. When you key the mic, the readout comes
on , but she doesn't trans or recive. About five seconds after I unkey
the readout goes blank again .
Now this is not all the time. She comes and goes working great
half the time . Two meter side hasn't acted up at all .

Help , has anybody had any of the same ?
Any idea ??

Thank=B4s

Vicenzo

2456. List of over 100 UFO crashes now on CSETI Website

Newsgroup: rec.radio.amateur.space
Date: 1997-09-19 00:00:00 UTC
From: "A.J. Craddock" <webmaster@cseti.org>
Message-ID: <34236358.2C79@cseti.org>
Source record: 18024

A list of over 100 UFO crashes can now be found on the CSETI Website under "What's New".

This is probably the most comprehensive list ever published, combining information from many public and protected sources, and includes events as recent as July of this year.

These events involve Unidentified Flying Objects in the most literal sense. We would appreciate explanations from knowledgeable list members regarding events definitely known to have been the result of meteors (or plane crashes) so that they can be removed from the list.

Source record: 17934

Hello all! I am more than just interested in creating a new special interest group relating to aerospace at Mt Hood Community College, and I am looking for all the help that I can get. If you are interested, please visit

www.teleport.com/~geoffg

Please note that this club _HAS NOT_ been formed, even though the web site may (should) lead you to believe that it has. The information center of the college does not open until Monday and until then I won't even be sure if it is possible to form this group, but I want the web site to be ready as soon as I gain permission (knock on wood).

I am still working on the page, and hope to have much more up by later today and sunday, after that I'm back to school and will not be able to get much done except on weekends (17 credits + managing a new SIG = Time debt). I would really love to hear from you, and I will post any ideas on the "Help" page ASAP.

For those who are wondering, Mt Hood Community College (MHCC) is located in Gresham, Oregon.

And lastly: Should I do anything with that logo? (To big, ugly, whatever, First pic as you load page)

Thanks for any help!
Geoff Granum

Paul,

I have been using a Spirit for about 2 years. It is a solid TNC,
and has been 100% reliable. I have noticed one problem area
and it has been confirmed by other SPirit users. This problem is
that although the Spirit does great on KO-23 & 35 -- it is terrible
on UO-22. I thought it was my receiver (an ICOM 970) but I have
heard the same complaint from someone with a Yaesu 736...

2468. Jupiter and Chart?

Newsgroup: rec.radio.amateur.space
Date: 1997-09-21 00:00:00 UTC
From: Howard Kanare <hkanare@sprintmail.com>
Message-ID: <3424F146.29EC@sprintmail.com>
Source record: 17936

We completed our half-wave loop antenna (John Potter Shields' design with screen reflector backing) for Jupiter/Io emissions and obtained a used Yaesu FRG8800 receiver. On the roof and aimed at Jupiter, coaxed to the receiver, we've been listening at the times provided by David Knisely of the Prairie Astronomy Club (http://www.4w.com/pac) but have yet to hear anything other than noise. Assuming the connections are all good (the antenna seems to function and we pick up lots of ham transmissions) what else should we know about listening for Jupiter emissions?

Does anyone know of a wall chart (or table/graph in a book) that shows celestial radio emissions of various objects as function of wavelength?

Thanks for the advice.

TO ALL RADIO AMATEURS BT
BID: $ANS-264.01

ESA RELEASES INFORMATION ON ARIANE 502 FLIGHT SCHEDULE

No. 28-97, Paris, 17 September 1997
JOINT ESA/CNES PRESS RELEASE
ARIANE 502 - Launch preparations

ANS provides the following just as it was received from ESA:

Preparations for the second Ariane-5 qualification flight (A502) are going ahead simultaneously at the Ariane 5 launch complex (ELA-3) at the Guiana Space Centre, Europe's spaceport in Kourou in French Guiana, and at the main industrial sites in Europe.

The launcher preparation campaign began on 16 June in Guiana (see ESA/CNES press release of the same date) and is proceeding satisfactorily. The data output from the Launcher Countdown Rehearsal, which took place on 5 September, has now been analyzed and the results are correct and in accordance with predictions.

However, in line with the overriding concern for rigour and achievement of maximum reliability on this second flight, additional studies and tests at launcher system level and below have proven necessary. While these have now almost all been completed with satisfactory results, some checks relating to analysis of the launcher's dynamic behavior have yet to be completed.

It will not therefore be possible to announce a new target date for the launch - previously scheduled to take place on or soon after 30 September 1997 - until 25 September at the earliest, when the final steps in the launch campaign have been

finalized.

Keep tuned to ANS for further updates.

BoD ELECTION RESULTS

HR AMSAT NEWS SERVICE BULLETIN 264.02 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 21,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-264.02

AMSAT-NA Corporate Secretary Martha Saragovitz has announced
the results of the annual election for the AMSAT Board of
Directors. A total of 1386 members cast ballots in this year's
election and the results are as follows:
Bill Tynan, W3XO.....1234*
Stan Wood, WA4NFY.....1161*
Dick Daniels, W4PUJ.....1114*
Joe Holman, AD7D..... 933*
Barry Baines, WD4ASW..... 842#
The four candidates receiving the highest number of votes
(*) were elected to serve on the Board for two years. The fifth
highest vote getter (#) will serve as the alternate until the
next election. The newly elected board will meet at the site of
the AMSAT-NA Annual Meeting in October. At that time they will
elect AMSAT-NA Officers.

SPUTNIK EVENT

HR AMSAT NEWS SERVICE BULLETIN 264.03 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 21,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-264.03

To celebrate the 40th Anniversary of the launch of Sputnik 1 on
Saturday October 4th, MX1ASE and GX0AUK will be on voice
mode for 24 hours on all available satellites. Operations continue
as time permits until 2359 UTC November 3rd the 40th anniversary of
the launch of Sputnik 2.

Joining the event Leo Labutin, UA3CR, and Andy Miranov, PK3KPK, from
the Russian Satellite Ground Station near Moscow. Andy will be on CW
on the RS birds and Leo on Voice and CW on FO-20 and FO-29.

The organizers thank JARL for their help in switching FO-29 to mode JA on Saturday 4th for the event.

Calling "CQ SPUTNIK" the preferred downlinks for MX1ASE and GX0AUK are AO-10 145.910, RS-12 145.910/29.430, RS-15 29.370, FO-20/29 435.860, and AO-27 436.800

A contact with any of the participating calls and a station can apply for a limited edition Anniversary Award Certificate. A4 size printed in color and endorsed with your name or call sign. Certificates cost £4 or $10 U.S. including postage. The moneys raised will be used to purchase much needed antennas and rotators for the Russian Ground Station which commands the RS satellites. SWL's are invited to apply and also anyone who wishes to make a donation. Donations of £4 ($10) qualify for a certificate.

Address for applications: John, G7HIA, Chestnuts, Desford Lane Kirkby Mallory, Leicestershire LE9 7QF ENGLAND.

The organizers would like to thank Mike Ellis of Eagle Antennas and Yaesu / Martin Lynchire & Son for special prices on the equipment requested by the ground station.

[ANS thanks John Heath for this update.]

KO-25 and KO-23.]

AO-27
(Uplink 145.85 MHz FM, Downlink:
436.792 MHz FM (As of April 1, 1997)
Operating normally.
This information can be found at www.umbra.com
AO-27 TEPR (Timed Eclipse Power Regulation) States are as follows
As of July 6, 1997
TEPR STATE Time TX Status
---
1 n/a OFF
2 n/a OFF
3 --- OFF
As of 9/21/97 the TEPR State are set to:
Tepr 4 - 12.5 Minutes
Tepr 5 - 18.0 Minutes
6 --- OFF
Current Information about AO-27 can be found at www.umbra.com

The TEPR States are defined as follows:

Tepr 1, Started when the satellite Enters the Eclipse
Tepr 2, Started at (tepr 1 time) after the satellite enters the eclipse
Tepr 3, Started at (tepr 1 time) + (tepr 2 time).

Tepr 4, Started when the satellite enters the Sun
Tepr 5, Started at (tepr 4 time) after the satellite enters the Sun
Tepr 6, Started at (tepr 4) + (tepr 5).

It should noted that TEPR states 1,2 and 3 happen during the Night Time passes and TEPR states 4,5 and 6 happen during the Day time passes. These occur during EVERY pass, not just over the U.S.A.

The times assigned to the TEPR states are chosen for the health of the satellite over operation convenience. Therefore, during parts of the year the satellite will turn on late or turn off early as seen by ground stations.

Users are asked not to transmit on 145.85 MHz if they do not hear the satellite's downlink so as to avoid possible interference to other satellite uplinks and downlinks on adjacent frequencies.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update.]

SB SAT @ AMSAT $ANS-264.06
WEEKLY SATELLITE REPORT PT 2

HR AMSAT NEWS SERVICE BULLETIN 264.06 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 21,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-264.06

AO-10
(Uplink 435.030-435.18 MHz CW/LSB, Downlink 145.975-145.825 MHz CW/USB)
Operational.
AO-10 IS spinning very slowly. Drag doesn't slow down its rotation, but magnetic damping around perigee does. It may well be wobbling a bit, since its nutation dampers probably don't work very well at this slow spin rate (about 1.5 RPM or so). However, Stacey Mills, W4SM, wouldn't describe its motion as TUMBLING. If it were tumbling, solar illumination would be truly chaotic and the transponder activity would come and go in a nearly random

fashion. There would be no twice yearly periods of good/bad AO-10 transponder/beacon function as there now are. So the majority of AO-10's motion must continue to be around the Z-axis which remains relatively stable in its orientation (see Web page below for some caveats regarding possible movement of AO-10's Z-axis orientation in the last year).

The QSB is mainly experienced during periods of high (90 deg) squint, when the omni antenna is routinely masked and unmasked by the three lobes of the space frame. During these times, for reasons that aren't entirely clear, switching polarization improves the downlink signal.
See: http://www.cstone.net/~w4sm/AO-10.html
for more info.
[ANS thanks Stacey Mills, W4SM, for this report.]

OSCAR-11
(Downlink 145.825 MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz..)
Operating normally. OSCAR-11 REPORT 14 September 1997
During the period 19 August to 13 September excellent signals have once again been received from the 145.826 MHz beacon. Telemetry nominal. The battery voltage has been maintained in the range 13.9 to 14.4 volts. The internal temperatures are slowly increasing from the minimum values observed at the end of June (battery -0.4C, telemetry electronics -1.6 C). The battery temperature is now 8.4C, and telemetry electronics 6.8C. The increased temperature is due to a reduction in solar eclipse times, which is expected to continue into October.

The WOD survey of channels 10, 20, 30, 40 (+Y, -X, +X array currents, array voltage) dated 25 June was transmitted until the end of August. The timing of this WOD coincided with the maximum eclipse times. This WOD is now available from my web site (details below). At the end of August a further survey of the same channels was taken, dated 26 August. This was quickly followed by channels 21, 31, 41, 51 (equipment currents) dated 30 August, and then by channels 10, 20,30, 40, dated 03 September, which are now being transmitted.

A single AMSAT-UK bulletin dated 21 June, by Richard G3RWL has been transmitted. This featured Sputnik-1 40th anniversary, MIR frequencies, and RS-10 news, and the Keplerian elements for OSCAR-11.

Considerable interest is now being shown in the mode-S beacon, as operators prepare for Phase-3D. Reports indicate that it is a very weak signal, and therefore ideal for testing converters, once they have been set up using the much stronger signal from DOVE. Reports have indicated that the signal from OSCAR-11 is around 24 dB below that of DOVE. There are however considerable variations in the comparisons which vary between -15 dB and -36 dB! Before the beacon partially failed the signal was measured at -3 dB below DOVE.

Hans, HB9AQZ, reports hearing the beacon using a 26 turn helix, mounted in the shack, and pointing through a double glass window. Ib OZ1MY in Copenhagen heard the beacon with two 16 turn helixes, feeding an

SSB down converter and pre-amp (combined noise figure 1.5 dB). Trevor, VK4AFL, reports S3 signals with a 60 cm dish, two turn helix feed, D.E.M converter and pre-amp. Victor, OE1VKW, reports S3-4 signals using a 67 element antenna, horizontal polarization, and UEK-2000 SAT. On the same equipment DOVE was received at S7-8. Thanks for all the reports.

The operating schedule is unchanged.

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The mode-S beacon is ON, transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and delivering half power. Any reports of reception on 2401 MHz. would be most welcome. Please e-mail g3cwv@amsat.org.

The 435.025 MHz. beacon is normally OFF. However it can sometimes be heard when the satellite is being commanded by ground control, ie. within range of Guildford, UK. When the 435 beacon is transmitting, the 145 beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit Clive's web site. It contains some software for capturing data, and decoding ASCII telemetry and WOD. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded, as new data is captured. The URL is -

http://www.users.zetnet.co.uk/clivew/

[ANS thanks Clive Wallis, G3CWV, for this information.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86 MHz FM, 1200 bps Manchester FSK
Downlink 437.0513 MHz SSB, 1200 bps RC-BPSK 1200 Baud PSK.
Beacon 2401.1428 MHz.)
Operating normally.
Below is a data sample of the +Z Array temperatures
when its position is toward the sun.

uptime is 1098/06:45:16. Time is Sat Sep 20 12:11:56 1997
IR Detector 255.000 C +Z Array V 22.608 V

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

DO-17(DOVE)
(Downlink 145.825 MHz FM, 1200 Baud AFSK.
Beacon 2401.220 MHz.)
DOVE has returned to 2 meters.
Operational software has again been successfully loaded into DOVE (DO-17)
by the DOVE command team. WD0E started the software at 09/17/97 19:40 UTC
and reports it seems to be running OK. Reports on the condition of the
batteries for the next 24 hours would be appreciated. Please send them to
wd0e@amsat.org. Jim reports it remains to be seen how long the intermittent
watchdog timer in the satellite will allow this software to run.
The s-band transmitter is on to facilitate testing of s-band equipment on
the ground, particularly for those working toward P3D S capability. Power
level on the 2 meter transmitter is about 1W day and night. Telemetry is
currently being sent every 60 seconds, but this could change due to power
management needs.
[ANS thanks Jim White, WD0E, for this update.]

WEBERSAT (WO-18)
(Downlink 437.104 MHz SSB, 1200 Baud PSK AX.25.)
No report available.

LUSAT-OSCAR-19
(Uplink 1200 bps Manchester FSK Uplinks:
145.84, 145.86, 145.88, 145.9 MHz FM, Downlink 437.125 MHz SSB,
1200 bps RC-BPSK.)
Operating normally.

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

UO-22:
(Uplink: 145.9 or 145.975 MHz FM. Downlink 435.120 MHz FM
9600 Baud FSK.)

UO-22 is operating normally.
Chris Jackson, G7UPN / ZL2TPO, has reloaded the Store and Forward communications task on the UO-22 On-Board Computer. This task includes incremental checksums which should make uploading slightly faster.
In the old task, once an upload was complete, the spacecraft had to perform the checksum on the complete file. Depending on the file length, this could take quite a long time. With the new task, the checksum is computed on the fly - while the data is actually being uploaded. Thus there is no need to recompute it at the end of the transfer and this checksum delay is then removed.

However, all files that were started before Chris Jackson, G7UPN / ZL2TPO, loaded the task around 1000 UTC on the 19th will receive a corrupt body checksum error when the upload is completed. If the file is uploaded again, it should be accepted. If trying to upload a large file that was started before the above time, then start again.

If anyone gets persistent body checksum errors while uploading files to UO-22 would they please let Chris Jackson know as soon as possible

[ANS thanks Chris Jackson, G7UPN / ZL2TPO,
Groundstation and Operations Manager, for this report.]

IO-26 (ITAMSAT)
Uplink 145.875, 145.9, 145.925, 145.95 MHz FM, Downlink 435.822 MHz SSB, 1200 Baud PSK.)
It's message says IHT97 software loaded. WOD not enabled.
.Its signal is very weak
[ANS thanks Charles Parmelee for this report.]

>use?

For your first experiments with Mir: just use an omnidirectional antenna
for the band where you are going to listen (70cm or 2m). Preferably not
one of those high-gain "white sticks" but a plain groundplane or crossed
dipole.

For other satellites and serious work: use crossed yagi's with switchable
polarization (right-hand and left-hand circular) and put them on an
azimuth/elevation rotator so you can point them at any point in the sky.
You can control the rotator from a computer with a tracking program,
or just keep the antenna sort of pointed using the manual controls and
the s-meter on your equipment.

2471. New APT decode program!!

Newsgroup: rec.radio.amateur.space
Date: 1997-09-22 00:00:00 UTC
From: jkktl@aol.com
Message-ID: <19970922141801.KAA28215@ladder01.news.aol.com>
Source record: 17939

Greetings weather sat enthusiasts..
there is a NEW APT decodeing program, using the soundcard as a demodulator!

It is called WavSat.

It appears to be very similar to WXSat, but I have not had a chance to
fully explore it. It does have an integrated sat tracking program, which
can be used for unattended image capture sessions.

Get it here:

http://members.aol.com/jkktl/ham.htm

2472. NO CODE "HAM CRAM" Review/EXAM

Newsgroup: rec.radio.amateur.space
Date: 1997-09-22 00:00:00 UTC
From: "Richard F. Gillette" <w9pe@starnetinc.com>
Message-ID: <3426ADAE.84D6CEC0@starnetinc.com>
Source record: 17940
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equiptment,rec.radio.amateur.homebrew,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.amateur.misc

Harper College in Palatine, IL will hold their one-day NO CODE Amateur Radio Review Course and Exam on Oct. 18, 1997. If you or someone you know or work with want an easy way to a License, this is it! Start at 08:30 review Radio, one hour lunch break, review Law and Operating Practices, then take the Exam at 16:30. Every subject on the exam is covered, hence if you have any physics or math background or have a radio background this is the "HAM CRAM " course for you.

Total course including pre course notes and exam $20.00.

Call 847-925-6994 for details.

Please copy and post at work and on local northern Illinois BBSs and nets.

Thank you;

2473. Old equipment

Newsgroup: rec.radio.amateur.space
Date: 1997-09-22 00:00:00 UTC
From: "William F. Erhardt" <erhardt@mt.net>
Message-ID: <01bcc77d$ed29a4a0$5e427fce@default>
Source record: 17941

I have the following equipment for sale and I don't know its value. If anyone has a need for this equipment, make an offer as its just taking up room in the shop

1. Aircraft Radio Transmitter
Type CCT 5208
Freq 3 - 4 mc
Stromberg Carlson dated Feb 5, 1942
Serial # 1139

2. U.S. Army Receiver BC-454
Western Electric

3. Antenna Tuner for Model BC-610

Bill Erhardt KA7YAO

2474. NORAD Two-Line Orbital Element Sets (TLE066)

Newsgroup: rec.radio.amateur.space
Date: 1997-09-22 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <606qt4fqf1@blackbird.afit.af.mil>
Source record: 17942

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2479. P3D Update

Newsgroup: rec.radio.amateur.space
Date: 1997-09-23 00:00:00 UTC
From: mbv@ti.com
Message-ID: <609ddo$g9v$1@tilde.csc.ti.com>
Source record: 17947

Has anyone heard if the P3D mods were done in time to get it on the rescheduled launch or if the substitute was mounted instead?

Ken K5MBV

As a further suggestion, people inviting others to look at their home page could include a few lines telling the reader what their home page is about - eg QRP, homebrew, CW, VHF or operating. This is so the reader can determine whether they are likely to be interested in its contents without having to go to the page itself.

Every time someone announces a new home page without a description, I ignore the message and don't look at their page. When people include a brief description, my interest/curiousity is aroused, and I'll often look at it. I think there's many other readers who think similarly.

Hello,

If you are someone who is tired of "Get-Rich-Quick" Schemes yet is still interested in earning a simple, legitimate second income without spending a lot of time or money, you may want to read further.

If you are like most people, you don't have time to go to meetings, talk to a lot of people, or sit by the phone and sell products.

For the first time available, you can join a company that will literally:

Close Your Sales For You!!

Our staff of marketing professionals advertise, recruit, and close all sales for everyone who joins the company. Checks are mailed out each Friday.

This is NOT one of those Scams, or Schemes you may hear about so often. But rather, it is a display of the newest technology that ensures your success, and is designed for those who do not like to sell.

Because of it's simplicity and affordability, people from all over are now earning thousands of dollars from the comfort of their homes!!

We Can Help You Do The Same!!

This is a respectable program created by a respectable comany for people who do not have a lot of time on their hands, yet are interested in earning a legitimate second income.

If you are excited about changing your financial future and would like to hear the rest of the story, please call us at:

1-800-811-2141 Code 45513
Office Hours: Mon-Sat 8am - 10pm

Checks are mailed each Friday!!
People are making money in the first week!!
We can help you do the same!!

//
//If this has reached you in error please accept our most sincere apologies. If you would like us to delete your address from our mailings, simply hit reply and type "remove" in the subject. You will automatically be blocked from future mailings. Thank you for your time.

Vince,

Please share with us what you have EVER done to help get an amateur satellite into space. Or perhaps you just could share share with us what you have done to promote amateur satellites in general.

Bitching about what others have/are doing does not count in either catagory.

Nothing is too difficult for those who don't have to do it.

This is the internet and you certainly have a right to voice your opinion, and I have a right to voice my opinion of you.

Jerry KK5YY

We know for sure that 502 is not going to launch on Sept 30th. On the 25th we might hear when the new launch date will be scheduled for. If the delay is long enough we (P3D) might still fly on 502.

2489. ESAJOINT ESA/CNES PRESS RELEASE

Newsgroup: rec.radio.amateur.space
Date: 1997-09-25 00:00:00 UTC
From: sw
Message-ID: <60djri$npi@cs1.FTA-Berlin.de>
Source record: 17957

Hi folks,

from sci.space.tech:

JOINT ESA/CNES PRESS RELEASE
Nr. 30-97 Paris, 24 September 1997

Ariane 502, final steps before launch

The verification process relating to analysis of the launcher's control loop (see ESA/CNES joint press release of 17 September) has taken longer than expected. Moreover, final qualification of the flight program software will require two additional weeks to complete. For these reasons, the launch campaign for the second Ariane-5 qualification flight at Europe's spaceport in Kourou, French Guiana, is being put on hold from 26 September, aiming at a launch on 15 October 1997 at the earliest. The campaign will be resumed seven days before launch, with the filling of the upper stage.

The Launcher Countdown Rehearsal performed in Kourou earlier in September gave good results. Meanwhile, the qualification process continued in Europe, where computer programs that simulate the real flight conditions of Ariane 502 indicated a risk of oscillation that could increase the consumption of the oil that feeds the displacing actuators used to steer the main engine.
To lower the risk of unwanted oscillations on this specific flight, two activities are being conducted in parallel:
a:verification of the validity of the data used in the mathematical model that simulates flight
b:introduction of a corrective measure using a filter to eliminate unwanted oscillations.

Incorporating this filter, contained in an electronic box fitted in the main stage, would entail additional qualification tests that would put the target launch date back by a further one or two weeks.

The choice of course of action and a decision on a new target date for the second test flight of Ariane 5 are expected to be confirmed early in October.

So, is this delay another chance to get P3D up with this flight?

Stefan (DD6FM)

SB SPACE ARL ARLS030
ARLS030 NASA gives KC5VPF the green light for Mir stay

Ham radio aboard Mir will continue at least for another four months. US astronaut David Wolf, KC5VPF, will get to replace his colleague Mike Foale, KB5UAC, aboard the Russian space station. Under intense political pressure to consider discontinuing the presence of US astronauts aboard the ailing and aging space station, NASA Administrator Dan Goldin gave the okay September 25 for Wolf's Mir stay. Approval came only hours before the shuttle Atlantis was to be launched from Cape Canaveral on mission STS-86 and a rendezvous with Mir. Wolf will continue the permanent US presence on the station that began in 1996 with Shannon Lucid.

Goldin cited separate scientific reviews of the situation aboard Mir in his decision to deliver Wolf to Mir as originally planned. ''We move forward not only because it is safe, but for the important scientific and human experience we can gain only from Mir,'' Goldin said. He added that, as NASA looks toward next June's launch of the first element of the International Space Station, ''nothing can beat the hands-on, real-time training aboard Mir.''

Early this year, a fire broke out aboard Mir. The spacecraft also has had various mechanical problems, including malfunctions of its oxygen-generating and carbon dioxide scrubbing systems. In late June, a collision with an unmanned Progress supply rocket during a docking maneuver damaged the spacecraft's Spektr module and disrupted scientific research. Among subsequent problems, Mir has suffered from repeated computer system failures, including a failure earlier this week. The Atlantis is to carry a new computer to Mir.

Wolf, 41, is both an electrical engineer and a medical doctor. A native of Indianapolis, Wolf is single. He has been an astronaut since 1990 and served as a mission specialist aboard the shuttle Columbia in late 1993.

Meanwhile, astronaut Andy Thomas is scheduled to replace Wolf aboard Mir in January. Thomas just received his Amateur Radio call sign. He's KD5CHF, which he says stands for ''Cosmonauts Having Fun.'' He will take the place of Wendy Lawrence, KC5KII, in the Mir rotation.

I had this exact same problem with my IC-970A a few years back. ICOM
assured me that they knew what was wrong and could fix it despite
it being intermittant. And you what? They did fix it and it's been
fine for a couple years now.

It's so long that I don't remember exactly what they fixed.

I'd give them call and arrange to send it to them.

Could some kind soul point me to a WWW or FTP (prefered) site where I might glean some information/software for the DOVE telemetry. I have an old decoding program from NK6K (I think) which decodes the >TLM frames, but no info on the >STATUS or other blocks. No Idea either on the equations used, 'tho' I have the feeling they're in the ax^2 +bx+c form, In which case I haven't got a clue as to the constants.

An FTP site is prefered as I suffer a rural telephone connection which delivers 4800bd on a GOOD day.

Hopefully the intermittant timer behaves as it is a particularly useful 'bird' for demonstrating the rudiments of satelite operation.

A visitor from the past...

I had a dream the other night, I didn't understand,
A figure walking through the mist, with flintlock in his hand.
His clothes were torn and dirty, as he stood there by my bed.
He tookoff his three-cornered hat, and speaking low he said:

"We fought a revolution, to secure our liberty.
We wrote the constitution as a shield from tyranny.
For future generations, this legacy we gave.
In this, the land of the free and home of the brave."

"The freedom we secured for you, we hoped you'd always keep.
But tyrants labored endlessly, while your parents were asleep.
Your freedom gone, your courage lost, you're no more than a slave,
In this, the land of the free and home of the brave."

"You buy permits to travel, and permits to own a gun.
Permits to start a business, or to build a place for one.
On land that you believe you own, you pay a yearly rent,
Although, you have no voice in choosing, how the moneys spent."

"Your children must attend a school that doesn't educate,
Your christian values can't be taught, according to the state.
You read about the current news, in a regulated press,
You pay a tax you do not owe, to please the i.r.s."

"Your money is no longer made of silver of gold.
You trade your wealth for paper, so your life can be controlled.
You pay for crimes that make our nation turn from God in shame,
You've taken satan's number, as you've traded in your name."

"You've given government control, to those who do you harm,
So they can padlock churches and steal the family farm.
And keep our country deep in debt, put men of God in jail.
Harass your fellow countrymen, while corrupted courts prevail."

"Your public servants don't uphold the solemn oath they've sworn,
Your daughters visit doctors so their children won't be born.
Your leaders ship their artillery, and guns to foreign shores,
and send your sond to slaughter, fighting other peoples wars."

"Can you regain the freedom, for which we fought and died,
Or don't you have the courage, or the faith to stand with pride?
Are there no more values, for which you'll fight to save?
Or do you wish your children, live in fear and be a slave?"

"Sons of the republic, arise and take a stand!
Defend the constitution, the supreme law of the land.
Preserve our great republic, and each God-given right,
and pray to God to keep the torch of freedom burning bright."

As I woke he vanished, in the mist from which he came,
His words were true, we are not free, we have ourselves to blame.
For even now as tyrants, trample each God-given right.
We only watch and tremble, too afraid to stand and fight.

If he stood by your bedside, in a dream, while you're asleep,
And wonders what remains of our rights he fought to keep?
What would be your answer, if he called out from the grave?
Is this still the land of the free and home of the brave??????

Our 'dummy sat' (concrete) is already there. All that would have had
to be done was swap the dummy for the real thing (if we had it ready).
The headlines after the launch of 502 will read: "AMSAT launches
Concrete Rock" are not my idea of good publicity for HAMS. We should
at the least have had a beacon on the dummy so we could track it.

Sigh. Any rocket launch is the product of an elaborate, detailed
launch campaign. The time to integrate P3D into Ariane 502 was
some time ago, and was precisely specified - you don't just show
up at Kourou with a satellite under your arm and say "Launch this,
please".

Yes, we missed the time to integrate P3D, but the circumstances
are such that we're in good shape for a later launch. Patience!

I propose that what AMSAT (and Ham sat) do is design a two part launch system. One part will be the launch vehicle. the second part will be the working satellite. The launch vehicle will be easily duplicated so we can build one each year. The sat itself will fit inside the launch vehicle and separate after achieving orbit. That way we will be able to make different sats for different purposes; how about an ATV repeater in space?, maybe a CW repeater in space?, maybe another FM repeater?, etc. We would then have a standard launch system at reduced cost. The various sats would then just need to be designed to fit inside our own launch revhicle.

To go a step further we could design three (3) launch vehicles: one for ESA, one for the Russian system, and one for NASA launches aboard the shuttle. This would gives us maximum launch capability and allow us to rapidly replace a broken sat.

Rocketry has suffered from non-creative thinking for decades.
There is no good reason why it couldn't be done this way.

My editing changes the POV slightly, but in general this is a great idea, SCO!

QSL.Net/QTH.Net Available

It is taking some time for the new DNS entry
to propagate, but you *CAN* access QSL.Net as:
209.60.242.81

And QTH.Net as: 209.60.242.87

Just enter:
http://209.60.242.81/

It may be a few days before the IP number gets
associated with the QSL/QTH domains.

Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.dx,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.swap,alt.ham-radio.marketplace,alt.ham-radio.packet

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

73,

John Seney
http://www.mv.com/ipusers/wd1v

>to see if I can get to of them to agree.

If you want to figure out which one is correct (assuming that one of
them is!) without running a third program, find NASA TV either on
your cable TV system or on the Web (shuttle.nasa.gov) and watch for
the real-time maps of the Mir/shuttle location.

2510. QwikKep v01.01 Available

Newsgroup: rec.radio.amateur.space
Date: 1997-09-28 00:00:00 UTC
From: marty@trucom.com
Message-ID: <60ka2i$shu@thepit.trucom.com>
Source record: 17973
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.space

QwikKep version 01.01 is now available for download at:

http://www.trucom.com/ppages/marty
ftp://ftp.kc6ufm.dyn.ml.org

This new version makes the following changes:

1) Makes a more rigorous check of the integrety of the input data files
to prevent problems due to editing and/or damage to the files.

2) Removes the pauses on errors and documents the returned error codes.

3) Cosmetic changes to the bulletin footers.

If you are using version 01.00 you should download the newest version.

Take Care & 73

SB NEWS @ AMSAT $SPC0929
* SpaceNews 29-Sep-97 *

BID: $SPC0929

=========
SpaceNews
=========

MONDAY SEPTEMBER 29, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* MIR/ATLANTIS DOCKING SUCCESSFUL *
==================================
Space Shuttle "Atlantis" successfully docked with the Mir space station on
27-Sep-97. Astronaut Mike Foale, KB5UAC, will return to the US on Atlantis,
and his work on Mir will be continued by Astronaut Dave Wolf, who was brought
to Mir by the Space Shuttle. In addition to exchanging crew members, the
docking mission also transferred supplies between both spacecraft.

The nighttime launch of Atlantis was visible to many living along the east
coast of the United States on the evening of 25-Sep-97 (26-Sep-97 UTC).
Main engine cutoff (MECO) appeared to occur just off the east coast of
New Jersey.

* RS-12 IN MODE A *
===================
The RS-12 satellite has switched its transponder to Mode A (145.910 MHz to
145.950 MHz up, 29.410 MHz to 29.450 MHz down.

* SINGLE YAGI EME *
===================
On the morning of 21-Sep-97, Dave Blaschke, W5UN, and Graham Daubney,
F/G8MBI, achieved the first single-yagi to single-yagi EME QSO in history.
Ths historic contact took place on 144.028 MHz.

W5UN used an old KLM 17LBX antenna (one of the few that survived the
destruction of a tornado when part of his first array) and F/G8MBI used
one of Mike Stahl's 2M-8WLs. Both stations were running maximum
legal power and neither employed ground gain. Success was achieved
on the third schedule attempt.

Congratulations to both on this historic achievement.

[Info via Ray, W2RS]

* SPUTNIK SPECIAL EVENT *

To celebrate the 40th Anniversary of the launch of Sputnik 1, MX1ASE and GX0AUK will be on voice mode for 24 hours on all available satellites starting on Saturday 04-Oct-97. Operations will continue as time permits until 2359 UTC on 03-Oct-97, the 40th anniversary of the launch of Sputnik 2.

Joining the event will be Leo Labutin, UA3CR, and Andy Miranov, RK3KPK, from the Russian Satellite Ground Station near Moscow. Andy will be active on the RS birds using CW, and Leo will be active on both voice and CW on FO-20 and FO-29. Organizers thank the JARL for their help in switching FO-29 to Mode JA on Saturday 04-Oct-97 for the event.

Prefered downlinks for the event are as follows. On:

AO-10: 145.910 MHz
RS-12: 145.910/29.430 MHz
RS-15: 29.370 MHz
FO-20/29: 435.860 MHz
AO-27: 436.800 MHz

Stations participating in the special event will call "CQ SPUTNIK".

A contact with any of the participating calls and you can apply for a limited edition Anniversary Award Certificate. The certificate is A4 in size, printed in color, and endorsed with your name or callsign.

Applications may be obtained from:

John Heath, G7HIA
Chestnuts
Desford Lane
Kirkby Mallory
Leicestershire LE9 7QF
ENGLAND

Please e-mail John at 100675.3601@compuserve.com for details.

* ARIANE 5 LAUNCH DELAY *

An Orbital Report On-Line special report dated 24-Sep-97 reports that the second Ariane 5 qualification flight (L502 vehicle/V101 flight) has been postponed to 15-Oct-97 at the earliest. The launch campaign will be put on hold on 26-Sep-97 and resume 7 days before launch with the propellant filling of the Storable Propellant upper Stage (EPS). The launcher, already fully integrated in Kourou, is ready for the final phase of the launch campaign.

This 2-week delay is required to complete the qualification of the vehicle's flight software. Moreover, simulations have shown that oscillations might appear in the Vulcain engine's Thrust Vector Control (TVC) system and increase the consumption of hydraulic fluid by the actuators.

There is little concern regarding actual early depletion of the hydraulic fluid reserve during flight but in some scenarios, these oscillations could cause the consumption to exceed the large margins specifically set for this qualification flight. These margins should be eased on future commercial missions.

CNES, the French space agency, and the European Space Agency are currently reviewing the computational model used for the simulation. If the risk of oscillations is assessed, a filter might be introduced in the electronics of the Vulcain's TVC system in order to suppress unwanted oscillations. This modification would require additional qualification tests and could result in an additional one to two-week delay.

[Info via the Orbital On-Line Report]

* KO-23 NEWS *
==============
The KITSAT-OSCAR-23 satellite is currently experiencing some heat-induced signal distortion of its downlink signal. The spacecraft is currently in full sunlight, and eclipses will not begin again until 08-Oct-97. Until that time, many groundstations will experience difficulty copying KO-23's 9600 bit per second downlink signal.

[Info via Stacy E. Mills, M.D. (W4SM)]

* ITAMSAT-OSCAR-26 NEWS *
=========================
Following the summer holidays, the ITAMSAT-OSCAR-26 satellite was returned to the air. Controllers will try to load BBS software on the satellite soon. In the meantime, the satellite is transmitting the following beacon message (using 1200 bps BPSK):

*** 26th September 1997 *** Happy birthday ITAMSAT!
Today IO-26 is 4 years old and all sub-systems are OK
Best wishes from the IT-AMSAT team

[Info via Daniele, IK2XRO, and Piercarlo, IW2EGC, of the ITAMSAT Command Team]

* MIR FREQUENCY CHANGE NEWS *
============================
The MIREX three week 70-cm experiment was very successful. The experiment ran from 08-Sep-97 through 28-Sep-97, and MIREX was able to gather some interesting data as a result of the experiment. Mir PMS and voice operations have now returned to 145.985 MHz simplex FM. Some preliminary results have concluded that the Mir crew did not experience any interference caused by other equipment on Mir to the 70-cm Amateur Radio Station. Over 110 different stations from around the world successfully contacted the Mir PMS while it was active on the 70-cm band. 70-cm transmissions from Mir did not appear to cause any interference to any equipment on Mir, and simple groundstations were proven to be able to contact Mir on voice provided that adjustments for Doppler shift were made on the ground.

More information will be made available once survey data from groundstations
who attempted contact with Mir on 70-cm is compiled.

[Info via Miles Mann, WF1F]

I am new to this satellite stuff...
I've only been a ham 21 years, so I guess it's about time. :)
I know that RS-12 has recently changed to mode A but
have RS-10/11 and RS-15 also changed? I just tried to hear
both on a recent pass a few minutes ago but couldn't hear
either one's beacons. Are they still active?
Thanks
Kevin, WB5RUE

Marty Albert <marty@trucom.com> wrote in article
<60ka2i$shu@thepit.trucom.com>...
> QwikKep version 01.01 is now available for download at:
>
<snip>

Quick-Kep turned out to be a tasteless joke. It produces 46k bulletins DUPLICATING info you can and will get much faster, quicker, and more reliably via the genuine AMSAT bulletins. The enormous message size is there so Marty's "packet" bulletins will travel the Landline Lid "net" efficiently, but will tie up genuine amateur radio digital network links.

In other worfds, it's another LandLine Lid attempt to undermine amateur packet radio, this time by flooding the network with grossly oversized bulletins containing redundant, useless information.

What a jerkoid stunt. But then again, what more can one expect from one of TAPR's pet LandLine Lids? Marty devotes the majority of his time, it appears, to the ideal of convincing all hams to communicate via non-ham means of communication. That is, when he is not deliberately trying to cause widespread problems across the genuine ham radio digital net.

LandLine Lids like Marty use non-ham means to bypass and route around ALL known types of ham radio digital communications, and that most certainly includes AMSAT stations. -- If a LandLine Lid is allowed to move messages over the Internet which were intended to be moved by the AMSAT station, what is that AMSAT station supposed to do with no traffic? AMSAT stations are quite expensive to build and maintain, but of course a LandLine Lid's Internet access is dirt cheap.. Once it's been "routed around" thoroghly enough by the proliferation of non-hams like Marty Albert, no AMSAT station will stay on the air for long.

AMSAT: Beware of "favors" from LandLine Lids. Ask any HF forwarder what their "help" will do for (to) you.

Users of FBB BBS can set up their REJECT file to reject all non-standard and bogus AMSAT bulls like this:

R * * AMSAT * #* 0

This lets genuine AMSAT bulls through and rejects garbage, including KC6UFM's "Quik-Keps" and most other bogus AMSAT bulls.

But it does require a phone. So I consider myself a "true" ham because my
goal is wireless connection. _And_ because I want to build the station myself.
It's the only way tounderstand how it works...or to afford it.

I'll take http over cw any day.

I was not aware that RS-12 had been switched to mode A.... it's been in
mode KT for some time now. RS-10 went silent last spring, and chances are
it won't be back. RS-15 is suffering from battery charging problems, so
may have been down when you listened for it. HOPEFULLY, RS-16 will be
activated soon, and we'll have a working mode A bird again.......

Philip Chien wrote:
> Oh? And how is your satellite going to mate on to a particular vehicle
> which doesn't have the proper mounting plate, electrical bus or anything
> else you happen to require?

The sat fits an "adapter". Design an adapter for each likely vehicle.
Design it for the worst possible ride and the structural materials and
specs will be identical. Electrical bus? You think the rocket control
electronics are different from the electronics in a sat? Just feed the
adapter a single voltage. Any voltage convenient. The adapter's transverter
input can vary, but the sat end is standardized. There are no other requirements.
You don't get anything else. Deal with it.

> And how are you going to show all of the
> safety documentation and other paperwork which shows that you've met that
> vehicle's requirements?

They already have it for the adapter. When you show up with the sat, hand
them the paperwork for the sat.

> vehicle company starts to do many different types of analysis (e.g.
> coupled loads, center of gravity, moment arms, etc.)

The standardised sat specs are identical every time. True, this puts some
constraints on the satellite. Deal with it.

> It is _NOT_ trivial.

But it could be.

> happens to be going the correct direction to meet your requirements.

What requirements? You get orbit. Whatever orbit.

> your suggestion may work 50 years from now, it just isn't feasible today.

A determined crew could build and certify the adapters, and distribute the
standardised sat requirements in less than 2 years.

> try your suggestion on them - and see if they can keep a straight face.

I doubt they'd understand it. Decades of inertia.

SB SAT @ AMSAT $ANS-271.01
ARIANE 502 LAUNCH DELAYED

HR AMSAT NEWS SERVICE BULLETIN 271.01 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 28,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-271.01

By a press release, September 24, ESA and the French space agency, CNES
announced that the flight test of the second Ariane 5 vehicle would be
delayed until mid-October.

The following is the exact wording of the ESA/CNES release:

JOINT ESA/CNES PRESS RELEASE

Nr. 30-97 Paris, 24 September 1997

Ariane 502, final steps before launch

The verification process relating to analysis of the launcher's
control loop (see ESA/CNES joint press release of 17 September) has taken
longer than expected. Moreover, final qualification of the flight program
software will require two additional weeks to complete. For these reasons,
the launch campaign for the second Ariane-5 qualification flight at
Europe's spaceport in Kourou, French Guiana, is being put on hold from 26
September, aiming at a launch on 15 October 1997 at the earliest. The
campaign will be resumed seven days before launch, with the filling of the
upper stage.

The Launcher Countdown Rehearsal performed in Kourou earlier in September
gave good results. Meanwhile, the qualification process continued in
Europe, where computer programs that simulate the real flight conditions of
Ariane 502 indicated a risk of oscillation that could increase the
consumption of the oil that feeds the displacing actuators used to steer
the main engine.

To lower the risk of unwanted oscillations on this specific flight, two
activities are being conducted in parallel:
a: verification of the validity of the data used in the mathematical model
that simulates flight

b: introduction of a corrective measure using a filter to eliminate unwanted oscillations.

Incorporating this filter, contained in an electronic box fitted in the main stage, would entail additional qualification tests that would put the target launch date back by a further one or two weeks.

The choice of course of action and a decision on a new target date for the second test flight of Ariane 5 are expected to be confirmed early in October.

End of ESA/CNES press release.

Some have asked if this delay means that Phase 3D may yet fly on Ariane 502. The answer to this is a definite NO. The 502 launch vehicle is already assembled on the pad at Kourou and there is no chance that Phase 3D can be accommodated on it.

Negotiations are proceeding between Phase 3D Project Leader Dr. Karl Meinzer DJ4ZC of AMSAT-DL and various parties in Europe concerning another launch opportunity for the satellite. It is not expected that any word on this will be forthcoming until after the launch of A-502. Although Phase 3D will not be aboard A-502, all in the amateur satellite community should be hoping for a very successful flight. The Ariane 5 program is important to ESA, and offers many potential future launch opportunities for amateur spacecraft.

Keep tuned to ANS for further information.

/EX

SB SAT @ AMSAT $ANS-271.02
DAVID WOLF, KC5VPF, ON MIR

HR AMSAT NEWS SERVICE BULLETIN 271.02 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 28,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-271.02

Ham radio aboard MIR will continue at least for another four months. US astronaut David Wolf, KC5VPF, will get to replace his colleague Mike Foale, KB5UAC, aboard the Russian space station. Under intense political pressure to consider discontinuing the presence of US astronauts aboard the ailing and aging space station, NASA Administrator Dan Goldin gave the okay September 25 for Wolf's MIR stay. Approval came only hours before the shuttle Atlantis was to be launched from Cape Canaveral on mission STS-86 and a rendezvous with MIR. Wolf will continue the permanent US presence on the station that began in 1996 with Shannon Lucid.

Goldin cited separate scientific reviews of the situation aboard MIR in his decision to deliver Wolf to MIR as originally planned. ''We move forward not only because it is safe, but for the important scientific and human experience we can gain only from MIR,'' Goldin

said. He added that, as NASA looks toward next June's launch of the first element of the International Space Station, ''nothing can beat the hands-on, real-time training aboard MIR.''

Early this year, a fire broke out aboard MIR. The spacecraft also has had various mechanical problems, including malfunctions of its oxygen-generating and carbon dioxide scrubbing systems. In late June, a collision with an unmanned Progress supply rocket during a docking maneuver damaged the spacecraft's Spektr module and disrupted scientific research. Among subsequent problems, MIR has suffered from repeated computer system failures, including a failure earlier this week. The Atlantis is to carry a new computer to MIR.

Wolf, 41, is both an electrical engineer and a medical doctor. A native of Indianapolis, Wolf is single. He has been an astronaut since 1990 and served as a mission specialist aboard the shuttle Columbia in late 1993.

[ANS thanks the ARRL fore this information.]

SB SAT @ AMSAT $ANS-271.03
ASUSat

HR AMSAT NEWS SERVICE BULLETIN 271.03 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 28,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-271.03

ASUSat which is now in the integration phase will be an easysat. It will have an FM repeater which is hoped will be as good as the one on AO-27. The FM repeater will have an uplink in the VHF band, 145.990 MHz, and a downlink in the UHF band, 436.700 MHz. The difference between the AO-27 and the ASUSat is that the repeater will be PL operated so the Transmitter will go on the air only if a user wants to access it using a PL. This enables ASUSat to improve its power budget, and make the transmitter a bit stronger then AO-27's.

In addition the ASUSat team will be able to make their digital comm system available to the general public. ASUSat does not have Pacsat type application on board, as ASUSat does not have a Ram-Disk. The ASUSat team is considering new experiments, such as an APRS store/dump digital repeater (9600 FSK). Right now the ASUSat team does not have a launch scheduled, but they have a good chance of getting a lift from their sponsors at OSC in mid 1998.

[ANS thanks Assi Friedman, 4Z7ABA/KC7WSZ, of Arizona State University for this news.]

SB SAT @ AMSAT $ANS-271.04
MIREX 70CM SURVEY

HR AMSAT NEWS SERVICE BULLETIN 271.04 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 28,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-271.04

The MIREX team would like stations who have worked it MIR PMS system on 70cm to help them collect data on experiences with working the 70cm PMS station (Sept 8 - 28, 1997).

MIREX Survey form:

Name
Call
State
Country
Email address
Packet address

Station for 2-meters
Transceiver
Channel Step size
Preamp
Antenna
ERP

Station for 70cm
Transceiver
Channel Step size
Preamp
Antenna
ERP

Modem type
Max Packet Modem speed
Does your radio station currently support 9600 baud Modems

Have you worked MIR on packet.
How many times per month average

Which frequencies did you use:
Success rate:
1. Almost impossible to connect or transfer data
2. Could connect and transfer data sometimes
3. Good reliable connects, easy to transfer data

Frequency Success rate Comments:
145.550

145.800 - 145.200

145.985

437.650

Do you compensate for Doppler when using 2-meters

Do you compensate for Doppler when using 70cm

What type of experiments would you like to see on ISS

QRM: Besides the normal QRM associated with other stations trying to
connect to the MIR PMS.

What types of QRM do you receive while working MIR and on which frequency
(Commercial traffic, Repeaters etc.).

What is the name and mode of your first Amateur Radio Satellite

Comments and observations should be directed to Dr. Dave Larsen, N6CO at:

doc@volcano.net (Internet) -or- n6co@n0ary.ca (Packet)

[ANS thanks Miles Mann, WF1F, of the MIREX team for this report.]

BID: $ANS-271.06

MIR
(Simplex 437.650 MHz. FM voice and packet.)
MIREX will be running the test from September 6, until September 28 1997
world wide. After the completion of the test, they will switch the MIR PMS
frequency back to the 2-meter frequency on September 29th.

See ANS Bulletin ANS-250.02 for more information. Test frequency is
437.650 MHz.
(Simplex 145.985 MHz, FM) after September 29th..

SAFEX, MIR 70 cm Repeater
(Uplink 435.750 MHz FM, Downlink 437.950 MHz FM,
Subaudible tone 141.3 Hz)
Not operational at this time.

RS-10
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)
RS-10 Still silent.

RS-12
(Uplink, 145.91-145.95 MHz CW/SSB, Downlink 29.41-29.45 MHz .)
Operational, now in mode A.

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Operational.
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 , 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9
MHz CW/USB)
Operational. FO-20 in mode JA continuously.
[ANS thanks Kazu Sakamoto, JJ1WTK, for this report.]

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK.)
KO-23's download efficiency is way down. A quick look
at one of my programs shows that KO-23's orbit is once again in full
sunlight and eclipses won't begin again until October 8th. The
recurring problem of heat-induced signal distortion has returned for a bit.
[ANS thanks Stacey Mills, W4SM and Jim Weisenberger, AA7KC,
for this report.]

KO-25
(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM,
9600 Baud FSK.)

KO-25 operating normally
[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25.]

AO-27
(Uplink 145.85 MHz FM, Downlink:
436.792 MHz FM (As of April 1, 1997)
The AO-27 Control team has turned AO-27 to digital
Telemetry gathering mode until Saturday 1997-Oct-4. During this time the
Analog Repeater will not be available for use. The AO-27 Control team asks
that Amateurs do not try to transmit to AO-27 during this Time. The time
spent this week gathering Telemetry will ensure a long life for AO-27..

If you have a AFSK TNC, the AO-27 command team asks that you set it up to
listen to AO-27 this week and if you can save a KISS log (best way is to
download AO27TLM from amsat) you can e-mail the log to N4USI@amsat.org.
Any data collected will be helpful to use in determining the health of
the satellite. West coast and not US stations will be most helpful.

This week marks the 4th Year AO-27 has been in orbit. Happy Birthday and
Long live A0-27.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update.]

FO-29
Voice/CW Mode JA
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)

SB SAT @ AMSAT $ANS-271.07
WEEKLY SATELLITE REPORT PT 2

HR AMSAT NEWS SERVICE BULLETIN 271.07 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 28,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-271.07

AO-10
(Uplink 435.030-435.18 MHz CW/LSB, Downlink 145.975-145.825 MHz
CW/USB)
Operational, Some FM'ing has been reported during the past week.
AO-10 IS spinning very slowly. Drag doesn't slow down its rotation, but
magnetic damping around perigee does. It may well be wobbling a bit, since
its nutation dampers probably don't work very well at this slow spin rate
(about 1.5 RPM or so). However, Stacey Mills, W4SM, wouldn't describe its
motion as TUMBLING. If it were tumbling, solar illumination would be truly

chaotic and the transponder activity would come and go in a nearly random fashion. There would be no twice yearly periods of good/bad AO-10 transponder/beacon function as there now are. So the majority of AO-10's motion must continue to be around the Z-axis which remains relatively stable in its orientation (see Web page below for some caveats regarding possible movement of AO-10's Z-axis orientation in the last year).

The QSB is mainly experienced during periods of high (90 deg) squint, when the omni antenna is routinely masked and unmasked by the three lobes of the space frame. During these times, for reasons that aren't entirely clear, switching polarization improves the downlink signal.
See: http://www.cstone.net/~w4sm/AO-10.html
for more info.
[ANS thanks Stacey Mills, W4SM, for this report.]

OSCAR-11
(Downlink 145.825 MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz..)
Operating normally. OSCAR-11 REPORT 14 September 1997
During the period 19 August to 13 September excellent signals have once again been received from the 145.826 MHz beacon. Telemetry nominal. The battery voltage has been maintained in the range 13.9 to 14.4 volts. The internal temperatures are slowly increasing from the minimum values observed at the end of June (battery -0.4C, telemetry electronics -1.6 C). The battery temperature is now 8.4C, and telemetry electronics 6.8C. The increased temperature is due to a reduction in solar eclipse times, which is expected to continue into October.

The WOD survey of channels 10, 20, 30, 40 (+Y, -X, +X array currents, array voltage) dated 25 June was transmitted until the end of August. The timing of this WOD coincided with the maximum eclipse times. This WOD is now available from my web site (details below). At the end of August a further survey of the same channels was taken, dated 26 August. This was quickly followed by channels 21, 31, 41, 51 (equipment currents) dated 30 August, and then by channels 10, 20,30, 40, dated 03 September, which are now being transmitted.

A single AMSAT-UK bulletin dated 21 June, by Richard G3RWL has been transmitted. This featured Sputnik-1 40th anniversary, MIR frequencies, and RS-10 news, and the Keplerian elements for OSCAR-11.

Considerable interest is now being shown in the mode-S beacon, as operators prepare for Phase-3D. Reports indicate that it is a very weak signal, and therefore ideal for testing converters, once they have been set up using the much stronger signal from DOVE. Reports have indicated that the signal from OSCAR-11 is around 24 dB below that of DOVE. There are however considerable variations in the comparisons which vary between -15 dB and -36 dB! Before the beacon partially failed the signal was measured at -3 dB below DOVE.

Hans, HB9AQZ, reports hearing the beacon using a 26 turn helix, mounted in the shack, and pointing through a double glass window. Ib OZ1MY

in Copenhagen heard the beacon with two 16 turn helixes, feeding an SSB down converter and pre-amp (combined noise figure 1.5 dB). Trevor, VK4AFL, reports S3 signals with a 60 cm dish, two turn helix feed, D.E.M converter and pre-amp. Victor, OE1VKW, reports S3-4 signals using a 67 element antenna, horizontal polarization, and UEK-2000 SAT. On the same equipment DOVE was received at S7-8. Thanks for all the reports.

The operating schedule is unchanged.

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The mode-S beacon is ON, transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and delivering half power. Any reports of reception on 2401 MHz. would be most welcome. Please e-mail g3cwv@amsat.org.

The 435.025 MHz. beacon is normally OFF. However it can sometimes be heard when the satellite is being commanded by ground control, ie. within range of Guildford, UK. When the 435 beacon is transmitting, the 145 beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit Clive's web site. It contains some software for capturing data, and decoding ASCII telemetry and WOD. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded, as new data is captured. The URL is -

http://www.users.zetnet.co.uk/clivew/

[ANS thanks Clive Wallis, G3CWV, for this information.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86 MHz FM, 1200 bps Manchester FSK
Downlink 437.0513 MHz SSB, 1200 bps RC-BPSK 1200 Baud PSK.
Beacon 2401.1428 MHz.)
Operating normally.

DO-17(DOVE)
(Downlink 145.825 MHz FM, 1200 Baud AFSK.
Beacon 2401.220 MHz.)
DOVE has returned to 2 meters.
Operational software has again been successfully loaded into DOVE (DO-17)
by the DOVE command team. WD0E started the software at 09/17/97 19:40 UTC
and reports it seems to be running OK. Reports on the condition of the
batteries for the next 24 hours would be appreciated. Please send them to
wd0e@amsat.org. Jim reports it remains to be seen how long the intermittent
watchdog timer in the satellite will allow this software to run.
The s-band transmitter is on to facilitate testing of s-band equipment on
the ground, particularly for those working toward P3D S capability. Power
level on the 2 meter transmitter is about 1W day and night. Telemetry is
currently being sent every 60 seconds, but this could change due to power
management needs.
[ANS thanks Jim White, WD0E, for this update.]

UO-22:
(Uplink: 145.9 or 145.975 MHz FM. Downlink 435.120 MHz FM
9600 Baud FSK.)
UO-22 is operating normally.

Chris Jackson, G7UPN / ZL2TPO, has reloaded the Store and Forward communications task on the UO-22 On-Board Computer. This task includes incremental checksums which should make uploading slightly faster. In the old task, once an upload was complete, the spacecraft had to perform the checksum on the complete file. Depending on the file length, this could take quite a long time. With the new task, the checksum is computed on the fly - while the data is actually being uploaded. Thus there is no need to recompute it at the end of the transfer and this checksum delay is then removed.

However, all files that were started before Chris Jackson, G7UPN / ZL2TPO, loaded the task around 1000 UTC on the 19th will receive a corrupt body checksum error when the upload is completed. If the file is uploaded again, it should be accepted. If trying to upload a large file that was started before the above time, then start again.

If anyone gets persistent body checksum errors while uploading files to UO-22 would they please let Chris Jackson know as soon as possible

[ANS thanks Chris Jackson, G7UPN / ZL2TPO,
Groundstation and Operations Manager, for this report.]

IO-26 (ITAMSAT)
Uplink 145.875, 145.9, 145.925, 145.95 MHz FM, Downlink 435.822 MHz SSB, 1200 Baud PSK.)
The actual beacon is:
26th September 1997 Happy birthday ITAMSAT!
Today IO-26 is 4 years old and all sub-systems are OK
Best wishes from the IT-AMSAT team
[ANS thanks Daniele, IK2XRO, and Piercarlo, IW2EGC,
ITMSAT Command Station for this report.]

Again: if you don't like the current state of the art - which
seems to do a pretty good job of lobbing things into orbit -
what are you going to do to change it? Cheap shots on USENET
are easy. The grunt work of actually doing something about it
is hard.

>>There is no good reason why it couldn't be done this way.

Oh? And how is your satellite going to mate on to a particular vehicle which doesn't have the proper mounting plate, electrical bus or anything else you happen to require? And how are you going to show all of the safety documentation and other paperwork which shows that you've met that vehicle's requirements?

In the real world when you sign your launch services contract the launch vehicle company starts to do many different types of analysis (e.g. coupled loads, center of gravity, moment arms, etc.) to determine an appropriate ride on its upcoming manifest. To say nothing about finding and matching appropriate co-passengers in the case of secondary launches or multiple payload vehicles. It is _NOT_ trivial.

Space travel is _NOT_ taking a box down to UPS and asking them to ship it to some orbital destination. And even then you're going to have a *mighty* long wait before you happen to find a space UPS truck which happens to be going the correct direction to meet your requirements.

While your suggestion may work 50 years from now, it just isn't feasible today. If you like I can put you in contact with the program managers of each of the major commercial launch service providers in the world. And you can try your suggestion on them - and see if they can keep a straight face.

>fit inside our own launch revhicle.

I don't think you mean 'launch vehicle' (e.g. Delta, Atlas, Ariane, Pegasus, etc.) what you're talking about is a satellite bus. And that's exactly what does exist in a couple of variations.

The microsat bus was designed to work with the Ariane auxiliary payload (ASAP) adapter. The first four microsats were AO-16, DO-17, WO-18, and LU-19. They included packet communications, digital voice, science data collection, etc. Later microsats were built by Italy, Mexico, and Interferometrics. A couple of others are under construction. For each particular satellite most of the components were identical (e.g. batteries, computer, etc.) with a special TSFR (This space for rent) with that particular satellite's special functions.

The microsat bus is available for license for commerical satellite operators, with those funds going back in to AMSAT's funds for future satellites. At one point there was a potential for a constellation of many microsats for a commercial little LEO packet network, but they weren't successful (couldn't get frequency assignments?)

And the University of Surrey has been using their UoSAT bus since OSCAR 9 for many different applications.

And many of us have discussed what we would want to do with the backup Phase 3-D spaceframe, or future spacecraft built with that design. There are many good features in the hexagon shape and many potential uses for future spacecraft.

>To go a step further we could design three (3) launch vehicles: one
>for ESA, one for the Russian system, and one for NASA launches aboard
>the shuttle. This would gives us maximum launch capability and allow
>us to rapidly replace a broken sat.

two notes here -

Satellite busses are normally generic enough to work with many different launch vehicles. The UoSat bus has flown on the Delta, Ariane, and some Russian launch vehicles.

Shuttle launches are _NOT_ practical for amateur satellites. There's a bunch of appeal to having satellites ready-to-go whenever a shuttle flight has excess space, but it just doesn't work out that way. If your satellite flies on the shuttle it has several orders of magnitude more safety restrictions, documentation, and paperwork. Which is certainly understandable - if a satellite failure causes an ELV to explode we've lost the ELV (which would have been lost anyway) and destroyed whatever the primary satellites are. But if a satellite falure causes a reusable launch vehicle to fail then you've lost the RLV too. And if the RLV happens to be the space shuttle, then it's a $2 Billion vehicle - plus the lives of the astronauts. Hence the extra restrictions to ensure that absolutely nothing will go wrong. The SEDSAT amateur satellite was to have flown on the STS-85 mission this summer, but couldn't make the safety requirements to ensure the safety of the shuttle due to their tether deployer mechanism. The good news is SEDSAT was transfered to a Delta launch. The shuttle can theroetically eject small satellites

overboard (NUSAT, GLOMR, BREMSAT and a couple of classified satellites which may or may not exist) but at the shuttle's altitude they only have a useful lifetime of about a year or so before they reenter. And those ejectables cannot have any hazardous substances (e.g. propellants). NUSAT and GLOMR had relatively inexpensive launches, but the current rates for a Hitchhiker Junior (which is where ejectable GAS-class satellites would fall) is expected to be about $500,000. At that price I'll go with a piggyback on an ELV and also get the longer lifetime.

> Again: if you don't like the current state of the art - which
> seems to do a pretty good job of lobbing things into orbit -
> what are you going to do to change it?

I've been working on it for years, using my own limited funds. I did the sat
first. Took it to an IEEE conference at Sarnoff-Princeton. Those GE and Marconi
guys didn't get it.
A cheap sat is useless without a cheap ride, and there were no cheap rides,
so I decided to focus on building a small rocket myself. Still working on it, but
I'd be glad to knock off long enough to lead the described endevour. Just need the bucks.

> Cheap shots on USENET are easy.

This isn't a cheap shot. I proposed a solution.

> The grunt work of actually doing something about it is hard.

Yea. Tell me about it.

Kevin, RS-10 is out of commission. There's a slim possibility it will
be back up sometime. RS-15 is having problems also. I don't know about
RS-12.

2529. RS-16 Condition

Newsgroup: rec.radio.amateur.space
Date: 1997-09-29 00:00:00 UTC
From: Kevin Muenzler WB5RUE <wb5rue@amsat.org>
Message-ID: <19970929.190111.wb5rue@amsat.org>
Source record: 17897

I tried this earlier but I don't think it went thru....
What's the status on RS-16? Is it alive and well? I read
some time ago that it had been shut off.

Kevin, WB5RUE

I'm reminded of the expression he who has one watch knows what time it
is. He who has two is never sure.

Couple of obvious things to check - are you using the same set of
keplerian elements in both programs? Are you using the same viewer
locatino, including time zone? Are you using the same Earth
gravitational field model? These can all cause various changes depending
on the satellite's orbit and amount of accuracy required.

One possible 'solution' would be to use a third separate source to
determine which program is correct (e.g. which program predicts a visible
pass more accurately or which program shows Mir over your horizon when
you hear its downlink, or check a third tracking program from another
source).

2533. RS satellites out of service?

Newsgroup: rec.radio.amateur.space
Date: 1997-09-30 00:00:00 UTC
From: scott <acepilot@mwt.net>
Message-ID: <3431E361.365D@mwt.net>
Source record: 17901

Haven't listened lately, but thought I read somewhere that one or more of the RS series sats were off the air. Any truth to that? Maybe I need to turn the rig on more often!
Scott (N0EDV)

Source record: 17909

Hello All;
I am selling "like new mint" AEA DSP-2232 Digital Signal Processor
"Mutli-Mode Data Controller" 2mos old still under Timewave warranty
With all original boxes, docs, warranty card, receipt & etc.
Please Re Me Via: email n2rif@amsat.org Or
Packet N2RIF@WM2F.#SNJ.NJ.USA.NOAM.
You can also try calling but my phone is usally busy.
My ph# is 609-386-9382..
I am asking $510 + shipping obo.
Thank you for reading my bulletin. Thomas J or just T.j. -73

PS.. I have been sent several replies informing me about the so
called drop in price at AES & HRO of new DSP-2232s for $499.
I have corresponded with "TimeWave" & there have been no
new DSP-2232s produced nor any price drop decided on. I do
have the written correspondance on this issue if intertested.
Tnx 73

Read below:

Space Shuttle/Mir Radio Coms - Updated 7/11/97

Shuttle amateur Radio experiment (Sarex) Downlink: 145.550 FM
This is for both voice AND packet modes. So if you hear short
bursts of noise they are in packet mode.

Some amateur radio 2 meter FM repeaters carry live air to
ground coms. Scan the 2 meter band between 144.000 and 148.000
or ask a local ham if they know of any freqs in your area.

On HF, WA3NAN - the Goddard amateur radio club
transmits the missions on: 3.860 (all freqs. in single side band)
7.185
14.285
14.295
21.390
21.395
28.650

These are dependant on propagation! In N.Y. I pick them up on
the 80 and 40 meter frequencies (the first 2) the best.
They I.D. in morse code and voice. Park on a freq. and listen awhile,
coms are not non-stop! There are sometimes long breaks in the action.
When the astronauts are asleep they are off the air. If the weather is
bad at the station or no control operator is available they won't be
on the air either. This is a volunteer service. Thanks to WA3NAN for
providing this service!

Mir 2 meter FM amateur radio downlinks are on 145.800 (Europe) and 145.985
in the U.S. These are for both voice AND packet radio. So if you hear short
bursts of noise they are in packet mode.

There is a ground control freq. of 143.625 FM that is sometimes
used as well, but NOT for amateur radio. I hope you speak Russian!

Mir is also now on 70 cm with voice downlinks on: 437.950
437.925
Packet downlink: 437.975

Happy listening!

Tom

2552. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1997-10-02 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <611824$3qv$1@blackbird.afit.af.mil>
Source record: 17920

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

SB SPACE ARL ARLS031
ARLS031 Functional Sputnik model set for Mir launch

Plans remain in place to launch a functioning mini-Sputnik from Mir October 4--the 40th anniversary of the launching of Sputik 1 by the USSR. Sputnik 1 was the first manmade satellite put into orbit around Earth.

Earlier this year, an agreement was signed between Russia and France to commemorate the 40th anniversary of the launch of Sputnik 1, and two groups of high school students cooperated in building the one-third scale model of the original Sputnik 1. Students in Russia built the satellite itself, while students in France built the 2-meter transmitter that will ''beep'' from space following its launch from Mir. The mini-satellite flew as cargo to Mir last month aboard a Progress rocket. According to Miles Mann, WF1F, of MIREX, the Mir crew will place the satellite in an airlock on Mir and push it out the door on October 4.

Following launch, the scale model of Sputnik will remain close to the Russian space station. It's estimated that its batteries will hold up for up to two months.

The transmitter will put between 100 and 200 mW into a circularly polarized antenna. The transmitter frequency is expected to be between 145.81 and 145.85 MHz (FM). The audio tone will be at 1.3 kHz but vary with temperature. For more information, see http://www.oceanes.fr/~fr5fc/angspoutnik.html.

Note the phrase "hand-launched." If I read the Sputnik II Web site correctly, the satellite is about 7.5 inches in diameter. Phase 3D is about six feet across (not including solar panels) and weighs, I believe, a few hundred pounds. Not exactly a good "pick it up and toss it out the airlock" candidate. Oh, and then there's the orbit...

Patty

2556. Did Sputnik II launch ok?

Newsgroup: rec.radio.amateur.space
Date: 1997-10-04 00:00:00 UTC
From: KD1YV <jimkd1y@eat_spam.and_die.snet.net>

Source record: 17831

The Sputnik model was supposed to be hand-launched from Mir today (40th anniversary of the original Sputnik.)

Did it happen? Has anybody heard the beacon? On what frequency?

I think for the first short while, it will have essentially the same trajectory, and therefore the same Keps, as Mir. When will it get its own set of Keps?

Hello everybody,

I might have the opportunity to go to Hong Kong by the end of the Year.
I currently have no equipment related to ham radio. I think it might be
a good place to buy electronics there. Does anybody have an idea or an
address where I could buy some transmitters at good prices ?
I am looking for a 144 Mhz transmitter and performant antennas.
What would be interesting for me is to hear Shuttle and Mir
communications.

I've seen conflicting information on this, the most recent of which
saying that it isn't being delivered (on a Progress resupply ship) for
another couple of days and won't be tossed till Oct. 12th or 13th.

* MIKE FOALE'S FINAL MESSAGE FROM MIR *
=======================================
The following message is from Mike Foale prior to his departure from the Mir
space station. It was received by Miles Mann, WF1F via the Mir packet radio
BBS:

Stat : PR
Posted : 09/28/97 14:50
To : ALL
From : R0MIR
@ BBS :
BID :
Subject: Mir Status

Well STS-86 made its docking smoothly yesterday, and I must honestly say
I am looking forward to seeing my wife Rhonda, daughter Jenna, and 3 yr
old son Ian, who my shuttle crew say has grown twice his size since I
last saw him. I will be sad leave my good Russian friends Anatoli and
Pavel here on Mir, but it is now time for me to say goodbye to them, and
to all the Hams in the world who have spent the time to talk to us.

Thank you.

I will be showing David Wolf, my replacement, how to operate the PMS
here, and I hope you will enjoy many contacts with him. For now, the
70cm experiment is over, and MIREX will later post its findings.

Best wishes
Michael Foale KB5UAC, NASA 5.

* DOVE-OSCAR-17 RETURNS TO 2-METERS *
======================================
Jim White, WD0E, has reported through the AMSAT News Service that the

DOVE-OSCAR-17 satellite has returned to 2 meters (145.825 MHz AFSK-FM). Operational software has again been successfully loaded into the spacecraft by the DOVE command team. WD0E started the software upload on 17-Sep-97 at 19:40 UTC and reports the software seems to be running well. Reports on the condition of the batteries would be appreciated, and should be directed to: wd0e@amsat.org. Jim reports it remains to be seen how long the intermittent watchdog timer in the satellite will allow this software to run. The S-band transmitter is on to facilitate testing of S-band equipment on the ground, particularly for those working toward P3D Mode-S capability. Power level on the 2 meter transmitter is about 1-watt day and night. Telemetry is currently being sent every 60 seconds, but this could change due to power management needs.

* SSTV FOR SPUTNIK ANNIVERSARY *
==========

Well known SSTV experimenter Ted G6HMS will be transmitting Sputnik 1 pictures to celebrate the 40th anniversary of the launch of Sputnik 1 using slow-scan television via the FO-20 and FO-29 satellites. Operations start on Saturday October 4th on FO-20 and FO-29 and will continue until November 3rd. Format for the transmissions is Martin 1 on 435.880 MHz to 435.870 MHz (USB). The uplink will be fixed in frequency, so groundstations receiving the images will need to tune their receivers in response to Doppler shift.

[Info via John Heath, G7HIA]

* STUDENTS HELP CELEBRATE SPUTNIK'S BIRTHDAY *
==========

On 04-Oct-57, Sputnik 1, the first man-made satellite was successfully launched in low-earth orbit, thus ushering in the dawn of the space age. Sputnik 1 was joined less than a month later by Sputnik 2 on 03-Nov-57. Sputnik 1 decayed in the earth's atmosphere in early January 1958, while Sputnik 2 survived until 14-Apr-58.

To help celebrate the 40th anniversary of Sputnik 1's historic space voyage, the L'Aeroclub of France, along with the Russian Aeronautical Federation joined forces to coordinate the construction of a miniature satellite similar in construction to Sputnik 1. Students from the Jules Reydellet College in St. Denis Reunion Island and the Polytechnic Laboratory of Nalchik Kabaradine Balkar Republique were called upon to develop a working model of the original Sputnik satellite that would be hand deployed from the Mir space station during an EVA on Sputnik 1's 40th birthday (04-Oct-97).

The satellite carries a low-power (100 mW to 200 mW) 2-meter VHF-FM beacon transmitter operating on 145.800 MHz that emits a pulsating tone similar to the original Sputnik. The audio frequency of the tone is a function of the internal temperature of the spacecraft in keeping with the design and operation of the original Sputnik. Its lifetime in orbit is expected to be between one and two months.

* HIGH-SPEED DIGITAL SATS ON THE WAY *
==========

With TMSAT-1 and other high-speed digital communication satellites being
prepared for launch, development on inexpensive and effective reception
solutions will soon be needed. Chris Jackson, G7UPN/ZL2TPO has prepared
a Web page describing what equipment is necessary to effectively communicate
with the next generation of high-speed "Pacsats". The page may be found at:

http://www.ee.surrey.ac.uk/CSER/UOSAT/amateur/38k4_receiver_paper.html

This page will be frequently updated with some additional information and
higher quality images over the next week or so, so stay tuned.

First of all, this is more antenna than the little U-100 was designed to handle. But you can make it work (for a while) by balancing the antenna. Tape lead weights out at the front end of the boom until the antenna is balanced. I did this before I bought a real rotator. It took a full bullet casting ingot to bring the antenna into balance. Use good tape, you don't want this coming loose and falling on your head. The U-100 lasted about a month of daily satellite use before it burned up.

And the point being ?

Mir is in Low Earth Orbit (LEO) and so would the satellite thrown out
of Mir, unless it has internal propulsion. The Mir orbit is quite low
and it drops constantly due to the atmospheric drag. To stay in orbit,
Mir is reboosted a few times a year to maintain orbit. A satellite
released from Mir without internal propulsion would deorbit within a
few months.

Oh I know that. I mean why can't we (AMSAT) design a small satellite
that we COULD launch from MIR ?

------=_NextPart_000_01BCD186.435380A0

Are you fed up of counting up and down manually you listing of the DXCC
countries in order to know your current status?
Are you tired of copying your listings of worked and confirmed countries
from one sheet to another every time there is an addition of deletion of a
country?
Don't you want to say "I have worked 150 countries, more or less" any more?
Have you ever spent an evening searching that paper or notebook where you
used to trace your DXCC status?

Here you have the definitive solution. The DXCC Worksheet.

HTTP://www.redestb.es/personal/g_sampol

What is the DXCC worksheet?
It is an Excel worksheet that helps you trace your status of DXCC
countries. You only have to fill the cells with your worked and confirmed
countries and the totals will be automatically updated. You don't have to
make any calculation !

What do I need for using the DXCC worksheet?
You need a computer running Microsoft's Excel Version 5.0 or 7.0(97)
Availability for former versions of Excel can be studied on demand.

Which are the facilities of the DXCC worksheet?
It provides an updated listing of the DXCC countries (including the deleted
ones). This listing includes:
Common prefix/prefixes
Name
Continent
ITU zone
CQ zone
Provides information on the date of insertion or deletion of the country.
Allows to enter data for any band from 160 m. to 23 cms. plus a
customizable band (3 cms, etc.).
Allows to enter separate data for SSB and CW plus a customizable mode
(RTTY, SSTV, etc.).
Automatically calculates:
Number of worked countries per band in SSB
Number of worked countries per band in CW
Number of worked countries per band in the customizable mode

Number of worked countries per band in mixed mode
Number of confirmed countries per band in SSB
Number of confirmed countries per band in CW
Number of confirmed countries per band in the customizable mode
Number of confirmed countries per band in mixed mode
Total number of countries worked in SSB in the WARC bands
Total number of worked countries in CW in the WARC bands
Total number of worked countries in mixed mode in the WARC bands
Total number of confirmed countries in SSB in the WARC bands
Total number of confirmed countries in CW in the WARC bands
Total number of confirmed countries in mixed mode in the WARC bands

How can I get the DXCC worksheet?
You can download it from my web site at:
HTTP://www.redestb.es/personal/g_sampol

So why not save all our sky-rockets from the 4th of July one year, make
a satellite and have them launch it from the cargo bay of the Shuttle.
Oh, wait! I bet they couldn't get a match to light out there could
they??
Is there such a thing as a zero oxygen punk? :-)

Keep an eye on the following web page regarding this project:

http://www.oceanes.fr/~fr5fc/spoutnik.html

I just looked at it, but the launch date is not yet given. Coming up is a special anniversary event on the 10/11/12 October. See the URL for details.

Since you asked: here is my opinion: I think you are way out of line.

I was able to able to use the recent UHF experimental frequencies
(which were widely published) on a daily basis and was even able to
upload a news report to Mike Foale - which he thanked me for.

I don't have a PacSat station, and I was running < 25 watts, using
a plain old AX25 Kantronics KPC-3 TNC.

Was the Doppler too much for you ?

Far from dominating the experiment - as you have alleged, Miles
and Dr. Larsen were helpfull and considerate.

We usually had 3-4 stations work the PMS per pass, and it was a
pleasure to work Mir without N1PPP hogging the frequency for the
whole pass.

I'll second ur comeents Don...pete n2oij here...was able to work MIR
last night..and post a msg...sure there were other stations there...but
we waited our turn and all had a decent crack at the PMS...

Anyone think about using the Drake TR270 for sat work? Looks pretty good
with cool features like auto Doppler shift, etc. Plus, they have it at
about $999 right now on their WWW site.

Actually, the Dragsat student project at UC San Diego is preparing to
do just that! While the first demonstration satellite may be
hand-launched, later multi-satellite missions are expected to have more
elaborate catapult and/or tether deployers. Check out their preliminary
Web site at http://calspace.ucsd.edu/dragsat/

And for those in the local San Diego area, there is a one hour
presentation at noon this Wednesday (8 Oct) that will provide an
overview of the project. The location is on the UCSD campus, in Urey
Hall, room 2102. Just show up, no prior reservation is needed. Be
sure to stop by a Visitor's Information booth (at either the Gillman
Drive or Torrey Pines & Genesee entrances) to get a campus map and pay
the $6 campus parking fee. Of course, there is free parking on the
south edge of the campus on La Jolla Village Drive, but it is generally
packed, and is about a 10 minute walk from Urey Hall.

Before you buy equipment in a foreign country, be sure that
you can legally import the equipment to your home country.

Also check on import duties _in your country_. The gentlemen
in Hong Kong will gladly tell you that there are no import
or export duties, if it helps them make a sale.

2583. Are you ready to retire yet??????

Newsgroup: rec.radio.amateur.space
Date: 1997-10-07 00:00:00 UTC
From: mike1@sprynet.com
Message-ID: <343a723f.70207532@news.sprynet.com>
Source record: 17852

Are you ready to retire yet??????

I thought, what the heck, I'll try it. It's only six dollars. I
didn't
do it right at first, I only sent out to about 30 newsgroups. But, I
got back my six dollars and actually made $159.37 in a week (someone
put
some change in the envelope). Anyway, now I'm going to do this the
right way; send out to 250 newsgroups! The rest of this letter is
just
a cut and paste from the original. All I can say is that it works. I
would never have believed it if it didn't happen to me. Just remember
that we must all follow the rules. Be HONEST and FAIR and you will
make
money! Sure is a lot of mail though!

Thanks for reading! - Darrin
^^^

But if you think this is just another scam, I suggest that you don't try
it.

PLEASE NOTE - THIS IS A 6-PERSON LIST, NOT THE USUAL 5. PLEASE DO NOT TRY TO CHEAT THIS PROGRAM. JUST ADD ONE NAME AND REPOST THE ARTICLE. IF
YOU DO NOT IT WILL NOT WORK, AND YOU WILL BE REMOVED. FROM THE LIST! FOLLOW THESE DIRECTIONS AND JOIN US IN A GREAT OPPORTUNITY!

The program has been revised and you will notice six names instead of five. The reason for this is the flood of five name programs and the sixth name will add $50000 to $100000. This is proven mathematically and in my bank account. I never really thought that this program would work, but IT DOES and it will for you too. Just be patient and follow the directions exactly. Print this article now, so you have all the information for your version. Remember to keep the names right. Let's go!

STEP 1

Invest your $6 by writing your name and address on six separate pieces of paper along with the words:
"PLEASE ADD ME TO YOUR MAILING LIST". (In this way, you are not just sending a dollar to someone; you are paying for a legitimate service.)

People have asked me if this is really legal. It is! You are using the
Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and on-line businesses and methods of generating income at home. Remember - people send you a small fee to be added to your list.
It is legal. What will you do with your list of thousands of names? That's up to you, but this is how it becomes legal. To be legal you must
actually sell a product or service if you expect to receive a dollar. Anyone sending a dollar back to you must receive something in return. You have already received this letter due to the participation of each of the 6 persons listed below. This letter and the plan given within this letter are a "product" that you have received. Thus, you will be sending
$1.00 to each of the 6 persons given below in exchange for receiving this letter and for asking them to provide the "service" of adding you to their mailing list.

THIS IS A SERVICE AND IS A 100% LEGAL BUSINESS OPPORTUNITY, WHICH I COVERED IN TITLE 18, SECTION 1302 AND 1342 OF THE POSTAL AND LOTTERY LAWS.

Now, please follow the given steps exactly to receive your desired amount of money:

STEP 1

Immediately send $1 US cash (a one-dollar bill, no checks, and no money
orders) to each of the 6 people on the list below. Wrap this dollar in a
note with the words: "Please add me to your mailing list." (In this way,
you're not just sending a dollar to someone, you're paying for a
legitimate service.) Also, to discourage those who prey on cash in the
mail, be sure the bill is completely hidden by the note. A woven
envelope is recommended.

Include your address. You do not need to include your name. This is the
key to the program! Also, let each person know what number they are in
your letter so he/she knows which cycle he is receiving the $1.00 from.

Make sure that you retain EVERY name and address sent to you, either on
computer or hard copy, but do not discard the names and notes that
people send to you. This is PROOF that you are truly providing a
service, and should the IRS or some other government agency question
you, you can provide them with this proof.

Therefore, you will start a list of all the people who send you a dollar
requesting to be added to a mailing list. Actually, you will want to
safeguard this list because it can generate even better responses and
much more money later! Fold a $1 bill inside each paper, and mail them
by standard mail to the following six addresses:

1) Rudolfs Osins
Aspazijas 37-4
Jelgava, LV 3001
Latvia

2) F. Rome
1030 Hilltop Dr.
Grapevine, TX 76051
USA

3) Chris Leclair
39 Gurly Rd
Edison, NJ 08817
USA

4) R.M.
66 Navsink Dr
Monmouth Beach, NJ 07750
USA

5) CEP
174 Hillcrest Dr
Barrington IL 60010
USA

6) DA
3 Sumter Ave.
Albany NY 12203
USA

STEP 2

Now remove the top name from the list, and move the other names up. This way #6 becomes #5 and so on. Put your name in as the #6 on the list
(Remember to take #1 off and change the numbers so #2 becomes #1, #3 becomes #2, #4 becomes #3, #5 becomes #4 and #6 becomes #5 and you become #6.)

STEP 3

LET ME TELL YOU HOW MUCH MONEY YOU CAN MAKE.

How do the numbers work for potential income earnings? Assume for the sake of example that you get a 7.5% return rate. This is very conservative; my first attempt was about 9.5%, and my second was over 11%.

1. You send out 200 letters, and 15 people (7.5% x 200) will send you $1
each. $15.00

2. Those 15 send out 200 letters each, and 225 people send you $1 each.
$225.00

3. Those 225 send out 200 letters each, and 3,375 people send you $1 each $3,375.00.

4. Those 3,375 send out 200 letters each, and 50,625.00 people send you
$1 each. $50,625.00

5. Those 50,625 send out 200 letters each, and 759,375 people send you $1 each. $759,375.00

6. Those 759,375 send out 200 letters each, and 11,390,625 people send you $1 each. $11,390,625

TOTAL $12,204,240.00!! That's 12 million dollars. If those figures sound incredibly high, figure that even with half the return rate, or even a quarter, the total is still spectacular. It works every time, but how well will depend on how many letters you send.

In the above example you mailed out 200 letters. This sounds like "pie in the sky," but the numbers add up, and with over 40 million people

on
the NET, it works! TIP: For an even greater return, post to MORE
than
250 newsgroups initially; try for 300-350.

When your name drops off a list, simply access another message from a
newsgroup and start the process over again. Post the new article to
at
least 250 newsgroups. Remember, the more you post, the more people
see,
and the more you get.

There are at least 25,000 newsgroups at any one time. This is a $7.92
investment. It takes about a week or so to start seeing a return- so
be
patient. The money should flow for about 3months. At that point,
simply
add your name to the list and start over.

I've done this three times and now I can quit my job and start
investing
in real estate full time. I assure you this can work. If you mailed
out
500 letters, you could have received even more! Check the math
yourself, but I guarantee it's correct. With this kind of return, you
have got to give it a try!

Try it once, and you'll do it again. Just make sure you send a dollar
to
each of the addresses on the list above with a note asking to be added
to their mailing list. Together we will all prosper and we will be
able
to share our wealth with those less fortunate than ourselves.

GOOD LUCK!!

2584. Radio Meteor Obs. Bull. Sept 1997

Newsgroup: rec.radio.amateur.space

Radio Meteor Observation Bulletin No. 50 October 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Barcelona, Spain (01 59' E, 41 21' N)
Frequency: 48.250 MHz
Transmitter location: most likely Czech television C2 C. Budejovica,
100 kW, horizontal polarisation.
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
Antenna: astronomical azimuth 215 deg (=NE), elevation 0 deg.
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (100 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT and
"Data Capture" software with 9 second/18 sampling interval to store
all the > 1.0 s signal increases.

. ? probably affected by sporadic-E, direct reception

Enric Fraile Algeciras

------------------------------------------------------------------------
Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
```

Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 deg (= E),
elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

September 1997

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Notes:
. ? probably affected by sporadic-E, direct reception
. local time = UT + 2 hours.

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

. local time = UT + 2 hours.

Pierre De Groote / comments by C. Steyaert

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 3 element Yagi, direction south, elevation 65 deg
Receiver: AR-8000 at 53.7600 MHz, SSB mode.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km, direction south 2) a 30 kW TV video carrier from Sicilia, Italy, distance 900 km, south. Both transmitters are on the same frequency (+/- 10 Hz) and are processed within the same 40 Hz receiver channel. Several high mountains in transmitter direction prevent direct and tropospheric reception.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record the audio signal. 20 channels of 2 Hz width are used for meteor identification, pictures with interference, sporadic-E, E-layer and FAI propagation are manually rejected.

All meteor counts below are corrected for a full hour observing time. If the recording duration is 20-40 minutes, a dot is shown after the value. Data for less than 20 minutes observing time are not shown here.

Counts of reflections longer than 6.5 seconds: assumed to be overdense.

| Sep 1997

Notes:
. blank value means either few or no data available, interference,
sporadic-E, E-layer or FAI propagation, or offline.
. nothing special to report during September 1997, also no event in
the counts of other duration length (0.5 - 120 seconds).
. no sporadic-E propagation in September 1997 detected.
. local time conversion: 2 hours ahead of UT (04h00 UTC is 06h00 local)

Werfried Kuneth

--------------------------------------------------------------------------------
Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omnidirectional
above 15deg el.
```

Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observer are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith
Observing method: FFTDSP software, manual count.

Notes:
-: lost counts because of high noise level or machine failure.
@: Hourly rate estimated by effective observation time less than 60 min.
n: Contamination due to radio noise
e: Contamination due to sporadic E opening
f: No data available due to TX or RX failure
JST = UT + 9 h

Hourly echoes over 10 dB SNR

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

2585. Re: Did Sputnik II launch ok?

Newsgroup: rec.radio.amateur.space
Date: 1997-10-08 00:00:00 UTC
From: dj0my@aol.com
Message-ID: <19971008200300.QAA03779@ladder01.news.aol.com>
Source record: 17854

Hi everybody,

today the PROGRESS cargo ship docked with MIR. There has been
one day of delay, because of some technical problems with the removal
of the old PROGRESS which was still docked on the docking port.
(the miniature Sputnik and other things arrived with this cargo ship)

Now let's hope that they throw it "out of the hatch" very soon..... ;-)

Best 73,

Oscar DJ0MY

2586. Icom PCR1000

Newsgroup: rec.radio.amateur.space
Date: 1997-10-08 00:00:00 UTC
From: Michael Blake <k9jri@worldnet.att.net>
Message-ID: <01bcd445$e086e4e0$3a20420c@mb2.d51.lilly.com>
Source record: 17855

I have an IC-PCR1000 computer controlled receiver on order. I have a few questions. Facts or opinions are welcome.

1. Any opinion on using it as the receiver for space use. The receiver is all mode and covers from 100kHz to 1.3 gHz.
I would expect to use a mast mounted preamp on 432 and 1.2.

2. How about slaving it to a low cost Icom HF xcvr, like a 707, with the CIV16 unit for use as a 28mHz source for the
transmitting convertor?

3. Has anyone actually seen one? What was your impression.

Mike Blake

2587. Satellite industry links

Newsgroup: rec.radio.amateur.space
Date: 1997-10-09 00:00:00 UTC
From: M Armstrong-Smith <mcom@globalnet.co.uk>
Message-ID: <01bcd4ae$3d57e620$81577ec2@default>
Source record: 17856

This free major resource on the web is intended for use by satellite and space industry professionals.

Containing links to hundreds and hundreds of industry web sites this is believed to be the largest and most extensive listing of its kind. It is derived from the list of links used internally within Microcom Systems Ltd for research on the web.

Categories in the listing include:

Space Agencies
Launch Vehicles and Services
Satellite Manufacturers
Satellite Operators
Satellite Service Providers
Professional Equipment Suppliers
Consumer Equipment Suppliers
Regulatory Agencies
Broadcasters
Standards Agencies
Professioanl Services
Universities and Research Centres
Trade Associations
Space Resources

Satellite Links can be viewed by visiting
http://www.users.globalnet.co.uk/~mcom/

If you would like to see your company web site listed in Satellite Links, contact Mike Armstrong-Smith at mcom@globalnet.co.uk

Company entries are included at no charge. Expanded entries including company address, phone and fax numbers, email address, as well as product details are available for a charge of £95 plus VAT (currently 17.5%).

Microcom Systems Ltd is a consultancy specialising in satellite communications.

2588. FS: Used tubes, Microwave Components, Test Equipment

```
Used Tubes, Untested, large quantities of each available,
Pulled from Surplus Equipment, sold "as is"
-------------------------------------------
6AH6 $0.25 each
6AL5 $0.25 each
6AN8A $1.00 each
6AU6A $0.50 each
6CL6 $.50 each
6X4 $.50 each
12AT7 $1.50 each
5651A $0.50 each
5726 $.25 each
5963 (12AU7A) $1.50 each
6080 $2.00 each
6189 (12AU7WA) $1.50 each
8068 $7.50 each
8136 $0.50 each
8532 $1.00 each

Test Equipment, working, but not recently calibrated, may need minor
repairs & calibration.
-------------------------------------------
Hewlett Packard 8640B/323 ( AN/USM 323 ) Signal Generator, $395.00

Microwave Components, used, untested, sold "as is".
-------------------------------------------
HP8731A, Pin Diode Attenuator, .8 to 2.4 GHz, $30.00 each
HP8731B, Pin Diode Attenuator, .8 to 2.4 GHz, $30.00 each
HP8732A, Pin Diode Attenuator, 1.8 to 4.5 GHz, $40.00 each
HP8732B, Pin Diode Attenuator, 1.8 to 4.5 GHz, $40.00 each
HP8733B, Pin Diode Attenuator, 3.7 to 8.3 GHz, $40.00 each
HP8734A, Pin Diode Attenuator, 7.0 to 12.4 GHz, $40.00 each
HP8734B, Pin Diode Attenuator, 7.0 to 12.4 GHz, $40.00 each
HP11517A, Mixer, 12.4 to 40 GHz, $100.00 each
HP X375A, Variable Attenuator, X Band, 0 to 20 dB, $40.00 each
HP X752A, 3 dB Directional Coupler, X Band, $12.50 each

Free Shipping in the USA & Canada on all of the above, on orders of
$25.00 or over. Orders under $25.00 add $4.00 for shipping & handling.
All prices are in US $, Canadian dollar checks should be written at 137%
of the US $ amount ( conversion rate .73 ). No minimum order.
Sale prices valid until 10-20-97 or while supply lasts.

: Oh I know that. I mean why can't we (AMSAT) design a small satellite
: that we COULD launch from MIR ?

: W4SCO

well.... AMSAT did build up a bunch of "microSats" a few years back.
As I recall they were rather Borg-like cubes that were 9 inches or so
on a side. Throwing such a bird out the window on MIR would be quite
simple. Getting it TO the window - that's a bit more difficult!

-(10,000 pictures of beautiful hot sexy Celebrities CD-ROM - ME#3)-
Questions? CALL US IN USA 1-757-484-7538
(http://www.mephoto.com)

Check this out:

600+ pictures of Cindy Crawford
400+ pics of Pamela Anderson
250+ pics of Elle Macpherson
200+ pics of Christina Applegate
200+ pics of Alicia Silverstone -==< 10,000 CELEBRITIES!! >==-
200+ pics of Mariah Carey
200+ pics of Sandra Bullock
150+ pics of Liv Tyler, young star
130+ pics of Niki Taylor
130+ pics of Kate Moss!!! For a list of ALL files on the CD
100+ pics of Madchen Amick goto www.mephoto.com
100+ pics of Racquel Darrian - *WOW*
80+ pics of hot model Jenny McCarthy! (Nudity!)
80+ pics of Paulina Poriskova, sexy supermodel!
70+ pics of Bridget Hall, supermodel!
50+ pics of TRACI LORDS, yes! ***6 Celeb CDs in One!***
50+ pics of Daisy Fuentes, hot spanish VJ
50+ pics of Salma Hayek, sexy latina actress! ORDER NOW!
50+ pics of Teri Hatcher 1-757-484-7538
* 4000+ pics of other NUDE stars
* 4000+ pics of PG-13 rated celebrity poses
* 10,000+ pictures total, thats TEN thousand!
* Graphics viewing software for Windows3.1/DOS/Win95
* CD is BBS ready, with descriptions of files! And its Mac readable!
* Many more features and pictures of stars!
* NO AMATURE MODELS! - ONLY Celebs!
* If you have ME#1 and ME#2 - This CD is all the stars/celebrities from them

(For MORE information content at http://www.mephoto.com)
or call 757-484-7538 in USA to order via phone!

Other information:
* Packed in white shipper: No signs of nudity (Wife protection plan!)
* There are over 10,000, that's TEN THOUSAND FILES, on ME#3 alone!
* All pictures are high quality at least 640x480!
* Directories are arranged in NUDE/NON NUDE format for easy use!
* Graphics viewing software for Windows/DOS/Win95
* CD Is ISO-9660 Macintosh compatible if you have a Mac JPG viewer
* It's truly BBS-ready with detailed descriptions of all files!

* ME#3 will save you -ALOT- of download/searching TIME & MONEY!
* Sysops! Has a files.bbs conversion program for different formats!
* Many more features.. Guaranteed or your money back!

This CD represents high quality work. Here is the pricing:
$$$ $36 each (plus $2 shipping, $5 shipping outside USA) $$$

2592. FT-767 info/opinions?

Newsgroup: rec.radio.amateur.space
Date: 1997-10-10 00:00:00 UTC
From: sbabb@lpub.NoQRM.com
Message-ID: <61l7rc$qbl@news-central.tiac.net>
Source record: 17861
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.dx,rec.radio.amateur.space

I'm looking for a "new" HF radio.

My Icom 730 has served well, but I'm looking for something that will cover 160 meters and give me more sensitivity and better filtering (particularly on SSB.) I like dxing, ragchewing, rtty/amtor/packet, and contesting. I live down the road from KC1XX, so I don't even see myself as a "little pistol" in contests (maybe more of a "rusty slingshot") but I enjoy seeing what I can do with my R5, doublet, and 100 watts.

I saw a Yaesu FT-767 GX II at the Rochester, NH hamfest last weekend. I didn't get much of a chance to look at it because someone bought it (for $1400 or so, I think) within minutes of me starting to look at it. It had modules for 6M, 2M, and 70cm. This interested me because I'd like to take a shot at the satellites, and it would also let me operate 6M dx and maybe a few of the local repeaters.

Since then, I've poked around dejanews and the web looking for info on this radio. As often happens, I found more questions than answers. So I've brought my questions to you:

1. What is the difference between a FT-767, a FT-767 GX, and a FT-767 GX II?

2. How are the filters in this rig? As 20 meters gets uglier, better filters seem to be what I need the most (followed by more receiver sensitivity.)

3. You can contest with any radio, but some are better than others. Do any contesters have comments on this rig?

4. Anyone want to comment on their experiences with the VHF/UHF modules and satellite work?

5. Are there other rigs that are as versatile as this one appears to be?

Thanks and 73,
Scott WA1VHT

(Please remove the "NoQRM." from my return address to reply.)

Newington, CT October 10, 1997
To all radio amateurs

SB SPACE ARL ARLS032
ARLS032 Sputnik model launch delayed

It now appears that the launch of a working model Sputnik 1 from the Russian Mir space station won't happen until October 18-20, and perhaps later. According to AMSAT News Service, the model Sputnik, assembled by students in Russia and equipped with a 2-meter transmitter by students in France, was to be aboard the Progress rocket that docked aboard Mir this week. Earlier information from several sources--including the sponsors--had indicated the model satellite would be launched from Mir October 4, the 40th anniversary of the original Sputnik 1 satellite.

The Sputnik-40, as it's called, reportedly will be hand-released by the Mir crew during a space walk. Latest information indicates the mini-satellite will transmit a ''beep-beep'' signal on 145.800 MHz (FM) from its 200-mW onboard transmitter. The batteries are expected to last a month or two.

>pwinter@best.com (Patty Winter) wrote:

>Oh I know that. I mean why can't we (AMSAT) design a small satellite
>that we COULD launch from MIR ?

You know, that's a darned fine question! :)

By trying to make a satellite which is all things to all people, we have created an expensive payload, which is very expensive (by amateur standards anyway) and creates a single-point-failure situation for amateurs. (If the Arian destructs itself, I know there will be many unhappy campers, it will take a long time to recover).

As for hand launching from Mir, the satellite's orbit will decay rather rapidly. This limits the longevity of any satellite in low earth orbit.

I know that AMSAT has been intersted in the micro-sat concept for along time. Can anyone who is closer to this subject update us on what we are likely to see in this regard in the future?

HOW TO ATTRACT GIRLS INSTANTLY....Secrets to instant sex appeal

PURE INSTINCT PHEROMONE ATTRACTANT FOR MEN
WILL GIVE YOU AN UNFAIR ADVANTAGE WITH WOMEN
GUARANTEED

(or your money back)!

Everyone knows that some men (a tiny minority) are able to instantly attract women. It used to be known as "animal magnetism". Scientists now say this natural attraction is due to pheromones - body smells that are not consciously detected, but that effect the behavior of others towards the person giving off these chemical signals. It's natures way of attracting the opposite sex. Scientists have now isolated and synthesized two natural Attractants- androstenol and androstenone pheromone. Carefully controlled experiments show they work and have been widely reported on television and in both the British and international press. Androstenone pheromone has been successfully tested on BBC TV's "TOMORROWS WORLD" and by Desmond Morris (Author of "The Naked Ape" and "Manwatching" and renowned human behaviorist) on BBC TV's "Friday Night... Saturday Morning."

New improved formula PURE INSTINCT from ICT Research Technology contains both ANDROSTENOL and ANDROSTENONE pheromone and produces and undetectable scent that subconsciously attracts women to the wearer. PURE INSTINCT is the world's number one selling and the most concentrated (5 - 7 x normal active strength) pheromone spray for men - don't be misled by cheaper (or more expensive) imitations.

WHAT THE PRESS SAY:

* Lowell Ponte, a former consultant on exotic weapons and a Readers Digest science writer, said in an interview that "use of the recently discovered chemical Androstenone should be banned. Congress should pass a law making it a crime to use this chemical to influence voters by making politicians appear more lovable.
- The San Francisco Chronicle -

* "The stuff attracts women like you wouldn't believe"
- Colorado Telegraph

* "And now this pheromone has been marketed, we've tested it - and good grief it works"
- Koave

* "pheromones influence human behavior in a subtle way. Women are attracted to the smell"
- The Daily Telegraph

* "Pure Instinct is likely to produce a state of sexual excitement or arousal"
- Men Only (Vol. #44 No. 4)

Much of our sales of PURE INSTINCT are reorders from existing users, reports confirm success. "PURE INSTINCT really does seem to work! The most dramatic instances have occurred when wearing it at discos. Girls just drift towards me and start flirting."
-DT Cardiff

"I Knew PURE INSTINCT wasn't a gimmick when one of the girls at work, quite out of character, started to seduce me when we were alone in the office."
-SD Nottingham

PURE INSTINCT comes in a discreet 15ml pocket roll on container with full instructions, Ideal for any man who wants to join that lucky few who have more than their fair share of sex appeal.

30 DAY MONEY BACK GUARANTEE

If you are not 100% delighted with the results from using PURE INSTINCT simply return remainder within 30 days for a full refund- No questions asked!

SpaceNews
=========

MONDAY OCTOBER 13, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* MIR NEWS *
============
During the month of October, there may be a few times when the Amateur Radio
equipment on board the Mir space stations is temporarily shutdown. People
should not panic if they should find the 2-meter station turned off for a
few days. The new crew is very busy storing the tons of supplies delivered
by the STS-86 Shuttle last week. Also, the Progress mission to Mir delivered
even more supplies during the first week of October including a scale model
of the original Sputnik satellite. The exact date this spacecraft will be
deployed from Mir is not yet known.

Some reasons for temporary shutdowns of the 2-meter Amateur Radio station
include:

1. The crew is Busy. Making Amateur Radio contacts is not their primary
mission in space.

2. Docking/undocking. When there is a planned docking or undocking of any
module, all un-used radio equipment is turned off for the duration of
the docking/undocking cycle.

3. Power rationing. Some experiments require large amounts of power.
Low priority experiments such as the Amateur Radio station will
sometimes be turned off for several hours during these periods.

4. While using the PMS. It is easier to edit the mail in the PMS mailbox
when the 2-meter transceiver is turned off, allowing the crew member
to concentrate on replying to mail sent over the PMS.

Help out the crew my limiting your packet access to Mir.

For the month of October, let's try to voluntarily limit the use of the
Mir PMS using the suggestions below. It is not a good idea to overwork

the crew by sending hundreds of messages to them and asking for replies. The crew members do not have very much free time to spend at the keyboard answering packet mail. It has been suggested that we break in the new crew members gently by following these simple guidelines:

1. Keep all messages short (there is only 13k of mail storage).

2. Send your message as a one way messages, such as greetings, introductions, etc. and do not try to ask questions requiring a reply.

3. Don't complain if you do not get any response from the crew.

More than one astronaut / cosmonaut has remarked that they do not like to make voice contacts because groundstations are too impatient to wait their turn. The Mir crew members are NOT CONTESTERS! When the crew is on voice, please follow these guidelines:

1. Listen for CQ

2. Listen for CQ

3. The crew members like to chat for 3-8 minutes per contact. If you are listening, you must wait for the CQ from the crew member before you transmit.

4. Do not transmit until the crew member has completely signed with the ground station. For example, "Thank you very much, this is KC5VPF clear with NA1UZN. CQ/QRZ?"

5. Do not bother the crews about QSL cards. N6CO is the QSL manager for all Russian and America crew members "living" on Mir. Note, N6CO does not do QSL for Shuttle missions or for other guests on Mir.

Remember, Mir is our stepping stone to the stars. Let's tread lightly.

[Info via Miles, WF1F]

* W3XO HONORED *
==========
AMSAT-NA President Bill Tynan, W3XO, has been elected a Fellow of the Radio Club of America. Bill is scheduled to receive his award at the Club's annual dinner, to be held 21-Nov-97 in New York.

The Radio Club of America, founded on 02-Jan-09, is the world's oldest radio communications society. The Club provides grants in aid to educational institutions and other worthy causes related to radio communications, as well as sponsoring technical meetings and publishing a journal, Proceedings. Its membership includes many leaders in amateur, commercial and government communications. Bill has been a member of the Club since 1992.

[Info via Ray Soifer, W2RS]

* FODTRACK 2.4 RELEASED *
==========
Manfred, XQ2FOD, reports releasing version 2.4 of his FodTrack program just

two days after releasing version 2.3. Version 2.4 adds an additional feature allowing it to perform Doppler tracking on the Yaesu FT-736 transceiver even for satellites that have uplink and downlink in the same band (like MIR).

FodTrack 2.4 was uploaded to KO-23 two weeks ago, and is available via the Internet from the AMSAT FTP server and Web site (ftp.amsat.org, www.amsat.org).

* SPOUTNIK-40 NEWS *
====================
Spoutnik-40, the official name for the Sputnik model to be deployed from the Mir space station is tentatively scheduled to begin operations between 18-Oct-97 and 20-Oct-97. Some reports indicate it may be deployed on 12-Oct-97.

Spoutnik-40's purpose is to help celebrate the 40th anniversary of the launch of the original Sputnik spacecraft (Sputnik-1) in October 1957. Spoutnik-40 carries a 2-meter FM CW/telemetry beacon on 145.800 MHz, and should be fairly easy to copy with a minimal satellite groundstation. A handheld receiver and a whip antenna may be suitable in many cases.

* RS-12 NEWS *
==============
Reports from users of the RS-12 satellite indicate thath the satellite remains in Mode A and is relaying distorted signals within its downlink passband. Some desense from the VHF commercial navigation transmitter flying along with the RS-12 transponder may also be the cause of some problems.

Not all satellite users appear to be happy with RS-12's switch from Mode KT to Mode A. Then again, not too many satellite users are pleased with the loss of RS-10. It is not clear whether RS-12's switch to Mode A was an error in commanding the satellite or was an intentional operational change. Users should keep tabs on the satellite, monitor telemetry transmissions, and listen to downlinks on 10 and 2 meters to help determine which mode the satellite is operating in.

* FEEDBACK/INPUT WELCOMED *

AMATEUR RADIO ON ISS
HR AMSAT NEWS SERVICE BULLETIN 285.01 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 12,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-285.01
This past week, the following ground breaking announcement was made to the
international delegates that comprise the current Amateur Radio on the
International Space Station (ARISS) team:
"Dear Delegates:
Our joint collaboration at the ARISS International Conference last
November was extremely successful. The signed Memorandums of
Understanding representing our combined commitment to develop a
single, coordinated amateur radio station on ISS were presented to
the top ISS officials.
NASA HAS GIVEN US A COMMITMENT. AMATEUR RADIO IS NOW AN OFFICIAL
PAYLOAD OF THE INTERNATIONAL SPACE STATION".
For the past few years, the SAREX Working Group and last November the
ARISS-International team, have met with members of the International Space
Station (ISS) Program Office to gain acceptance of amateur radio on the
space station. These efforts, as well as discussions held this past month
with ARISS team member Matt Bordelon, KC5BTL, and the ISS Payloads Office
at the Johnson Space Center in Houston, have led to the following plan for
amateur radio on ISS.
The plan is divided into three distinct capabilities.
1. First, the delivery of a transportable amateur radio station.
With the first crew scheduled to arrive in January 1999 for a 5 month
stay. It must provide the basic capabilities that will allow the crew
to establish voice and packet contacts with friends, family, school
groups and other amateur radio operators.
It must be capable of operating from within the Russian Service
Module, a module with good Earth visibility and the primary crew
residence during the early part of the assembly sequence.
2. External pallets will provide the second capability and location for
amateur radio equipment. The EXPRESS pallets, located on the S3
(starboard) truss segment, are a perfect location for potential repeater
and microsat-type payloads. These pallets, which are due to arrive on
ISS-UF4 in January 2002, have power, thermal, and telemetry connections.
They also have good Earth visibility. Each pallet will be installed

robotically.
3. The permanent station will provide the third distinct capability. This permanent station is expected to house the most complete amateur radio station with the greatest functionality. The U.S. Habitation Module, currently scheduled for delivery sometime in 2002, will have good Earth visibility and plenty of feedthroughs for external antennas. During the international partners meeting in Houston, the team agreed that this station should include slow scan TV, fast-scan TV, packet, voice, and experimental modes. Moreover, the plan is for the station to include several frequency bands and modes (SSB & FM) and have the ability to interface with the ISS audio and video subsystems.
AMSAT-NA Vice President for Manned Space Programs, Frank Bauer, KA3HDO, announced: "This is truly a monumental decision which will solidify the future of amateur radio on manned space vehicles". He continued, "As our space explorers occupy the international space station and eventually venture to worlds beyond, amateur radio will continue to provide the adventures of space flight directly to radio amateurs, students and the general public on Earth".
When he learned of the decision to make amateur radio an official payload on ISS, Joerg Hahn, DL3LUM, from the German SAFEX team stated: "Thank you for your very POSITIVE mail...these are very stimulating news...it is a good sign to know that the ham activities will be an official part of ISS".
Like the current SAFEX, MAREX, MIREX and SAREX programs, the ARISS international partners are striving to develop an amateur radio station that will enable experimentation, promote interest in amateur radio, and spark student's interest in the science and technology fields. The ARISS team includes members from Great Britain, Germany, Italy, France, Japan, Russia, Canada and the United States.
Stay tuned to future ANS bulletins as the hardware concepts from the international partners solidify into a preliminary design.
For more information on the International Space Station and the planned assembly sequence, see: http://station.nasa.gov/station/assembly
[ANS thanks Frank H. Bauer, KA3HDO, of the SAREX Working Group for this report.]

SB SAT @ AMSAT $ANS-285.04
2-METER ACTIVITY ON MIR
HR AMSAT NEWS SERVICE BULLETIN 285.04 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 12,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-285.04

During the Month of October 97, there may be a few times when the Amateur Radio equipment on board the MIR space stations is temporarily shutdown.. The new crew is very busy storing the tons of supplies delivered by the STS-86 Shuttle last week. Also, a new cargo Progress rocket is schedules to fly the first week of October, with even more supplies, including a scale model of the Sputnik Satellite.
Reasons for Temporary shutdowns of the Amateur Radio 2-meter Station
1. Crew is Busy: Amateur Radio is not their Primary Mission
2. Docking/undocking: When there is a planned Docking or Undocking of any module, all un-used radio equipment is turned of for the duration of the docking/undocking cycle.
3. Power rationing: Some experiments require a large amount of power. Low priority experiments such as the Amateur Radio station will sometimes get turned off for a few hours.
4. Using the PMS: It is easier to edit the mail in the PMS mail box, when the radio is off, and the crew member can concentrate on replying to mail sent over the PMS.

Help out the crew my limiting your Packet access:
For the month of October, lets try to voluntarily limit the our use of the PMS mail to the suggestions below. We do not want to over load the crews by sending hundreds of messages and asking for e-mail replies. The crews do not have very much free time to spend at the keyboard answering mail.

1. Keep your messages short (there is only 13k of mail storage)
2. Send your message as a one way messages, such as , Greetings, Introductions, etc. and do not try to ask questions requiring a reply.
3. Don't complain if you do not get any mail from the crew.
Voice operations:
More than one astronaut / cosmonaut has told me the do not like to work voice, because the crowds to not wait for their turn. The Crew members are NOT CONTESTERS! When the crew is on voice, do the following:
1. Listen for CQ
2. Listen for CQ
3. The crew members like to chat for 3-8 minutes per person. If you are listening, you must wait for the CQ from the crew member before you transmit.
4. Do not transmit until the crew member has completely signed with the

ground station, example, ?Thank you very much, this is KC5VPF clear with
NA1UZN, CQ/QRZ?
5. Do not bother the crews about QSL cards. N6CO is the QSL manager for
all Russian and America crew members living on MIR. Note, N6CO does not
do QSL for Shuttle, nor for other guests on MIR.

DO-17(DOVE)
(Downlink 145.825 MHz FM, 1200 Baud AFSK.
Beacon 2401.220 MHz.)
DOVE has returned to 2 meters.
For those operating JOTA the weekend of October 25 you may want to take
your packet gear and attempt to copy DOVE (DO-17) on 145.825 MHz. DOVE
will be transmitting a greeting to JOTA operators from about Oct. 15th
through about Oct. 23rd. Transmissions will be 1200 baud packet and
standard packet equipment can demodulate this signal. The signal will
not be strong, the satellite will be transmitting about .8 watts day and
night. The Dove command team would suggest a small beam if you want to
assure success. The message will be transmitted about every 60 seconds
along with telemetry, and will be in ASCII text.
[ANS thanks Jim White, WD0E, for this update.]

UO-22:
(Uplink: 145.9 or 145.975 MHz FM. Downlink 435.120 MHz FM
9600 Baud FSK.)
UO-22 is operating normally.
Chris Jackson, G7UPN / ZL2TPO, has reloaded the Store and Forward
communications task on the UO-22 On-Board Computer. This task includes
incremental checksums which should make uploading slightly faster.
In the old task, once an upload was complete, the spacecraft had to
perform the checksum on the complete file. Depending on the file
length, this could take quite a long time. With the new task, the
checksum is computed on the fly - while the data is actually being
uploaded. Thus there is no need to recompute it at the end of the
transfer and this checksum delay is then removed.
However, all files that were started before Chris Jackson, G7UPN /
ZL2TPO, loaded the task around 1000 UTC on the 19th will receive a corrupt
body checksum error when the upload is completed. If the file is uploaded
again, it should be accepted. If trying to upload a large file that was
started before the above time, then start again.
If anyone gets persistent body checksum errors while uploading files to
UO-22 would they please let Chris Jackson know as soon as possible
[ANS thanks Chris Jackson, G7UPN / ZL2TPO,
Groundstation and Operations Manager, for this report.]
IO-26 (ITAMSAT)
Uplink 145.875, 145.9, 145.925, 145.95 MHz FM, Downlink 435.822 MHz SSB,
1200 Baud PSK.)
The actual beacon is:
26th September 1997 Happy birthday ITAMSAT!
Today IO-26 is 4 years old and all sub-systems are OK
Best wishes from the IT-AMSAT team
[ANS thanks Daniele, IK2XRO, and Piercarlo, IW2EGC,
ITMSAT Command Station for this report.]

So...what's your point ?

Are you just ticked because they didn't invite you ?

During the UHF experiment they were on the published frequency
more than 90% of the time - I know, I monitored most of the passes.

What have you got against MIREX ?

Use YOUR head: The $10.00 he charges barely covers production and
postage. If you don't want one - don't order one.

I maitain, your original post was offensive, un-gentlemanly and
very much out of keeping with the spirit of amateur radio.

I see by the responses however, that you speak only for yourself.

SB SAT @ AMSAT $ANS-286.01
P3D SPECIAL REPORT

HR AMSAT NEWS SERVICE BULLETIN 286.01 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 13,1997
TO ALL RADIO AMATEURS BT
BID: $ANS-286.01

During the last couple of weeks there has been quite some media-coverage of ARIANE 502, some of it with very little relationship to the facts. With this release we would like to put an end to some speculations and present the situation as it really exists today. Until the beginning of this year ESA analyze the flight-records of the ill- fated flight ARIANE 501 and as a consequence, the vibration specifications for AMSAT P3-D were more than doubled on the AR-502 flight.

AMSAT then immediately asked a specialist to analyze the impact of this change. This resulted in a list of modifications required for P3-D, and work was started without delay to implement them.
All flight-ready modules had to be removed from the satellite. The mechanical structure had to be partially disassembled and reinforcements and other components had to be added to harden P3-D for the AR-502 flight environment.

Our schedule of course was delayed by this without our fault and we got out of step with ESA-planning by 4 - 6 weeks.
AMSAT was obliged to inform ESA about this turn of events, and initially ESA accepted this situation since there was also considerable schedule uncertainty concerning the launcher. It was agreed to take a decision in early September.

But in August ESA terminated our contract unilaterally; ESA then maintained that the launch would occur with near-certainty by the end of September.

Our contract now stipulated that AMSAT would have to provide a dummy-mass to simulate the mass of P3-D within the SBS adapter. Contrary to the contractual requirement, ESA then decided that AMSAT would not have to provide the dummy-mass. The reason probably was that the flight-mass for AR-502 hat been reduced by about the same amount as the mass of P3-D. This was fortunate, because AMSAT thus saved the expenditure for the dummy-mass. But the SBS built by AMSAT remains part of the AR-502 payload. The SBS had been purchased by ESA from AMSAT; this was always planned in this way as part of our contract. Immediately after the AR-502 launch (now stated as "October 28 at the

earliest"), AMSAT and ESA will have enough facts to search for an amicable solution which will guarantee an early launch of P3-D taking into consideration the actual ARIANE flight-planning.

This developments of events of course is very regrettable, but our contract leaves us little choice but to accept initially the above situation. For ESA the successful launch of AR-502 of course has highest priority and precludes any scheduling risks on our behalf. Unfortunately this means right now a launch delay for us. But we should not forget that 16 amateur-spacecraft were launched on ARIANE which constitutes a record in it's own right of support of our cause. Thus it would not be helpful to jeopardize the present negotiations by speculations and expressions of bad tempers. Both sides work very hard to find an acceptable solution towards a new flight-opportunity for AMSAT P3-D. We are certain that P3-D will be launched next year on an ARIANE."

Dear Fellow Hobby-Radio Enthusiast,

This is a brief reminder that FBOM Magazine Online has undergone a major website update with new stuff.

Although FBOM Magazine Online tries to maintain a monthly major update schedule (and we're pretty late this time), many additions and changes are made on a more frequent basis. We recommend that you check our website regularly so you won't miss a thing. And as always, FBOM Magazine and FBOM Magazine Online welcome your comments.

And by the way, the next Hardcopy Issue of FBOM Magazine will hit the Snail-Mail in November packed with goodies. Check the website for information on Subscribing Today. A true "multi-RF-cultural" hobby radio publication --FBOM Magazine and FBOM Magazine Online.

73 and have fun with your radio hobby!

I have found very few bargains anymore in asia, including Hong Kong. KNOW WHAT YOU ARE LOOKING FOR, AND WHAT PRICE YOU CAN GET IT FOR LOCALLY. If you are in the US, get an AES or HRO catalog. Be sure to add duty fees.

Most manufacturers have different radios for different markets, as the bands are different, and tones are different. Also, beware that there is probably no warranty, you will not be able to get it repaired locally. This is what is called a "grey market" radio.

Are there bargains? Yes! But know exactly what you are looking for first, and let the buyer beware. I've had better luck in Hong Kong with camera equipment......

Oscar,

Thanks for the update. Whoever on the NG hears it first, be sure to post the
actual
frequency that it beacons. I'll start monitoring with the next passes.

My XYL suggested a graphic thought on the "launch" of Sputnik II. Picture this
-
two
Russian and one American rednecks, driving their broken down high-tech tractor
trailer
down an orbital backroad. Suddenly, one rolls down the window and pitches his
litter
out along the skyside. And thus, the orbit of Sputnik II is born :-)

Hi everybody,

today the PROGRESS cargo ship docked with MIR. There has been
one day of delay, because of some technical problems with the removal
of the old PROGRESS which was still docked on the docking port.
(the miniature Sputnik and other things arrived with this cargo ship)

Now let's hope that they throw it "out of the hatch" very soon..... ;-)

: Oh I know that. I mean why can't we (AMSAT) design a small satellite
: that we COULD launch from MIR ?

: W4SCO

well.... AMSAT did build up a bunch of "microSats" a few years back.
As I recall they were rather Borg-like cubes that were 9 inches or so
on a side. Throwing such a bird out the window on MIR would be quite
simple. Getting it TO the window - that's a bit more difficult!

Subject: Icom PCR1000

I have an IC-PCR1000 computer controlled receiver on order. I have a few
questions. Facts or opinions are welcome.

1. Any opinion on using it as the receiver for space use. The receiver is
all mode and covers from 100kHz to 1.3 gHz.
I would expect to use a mast mounted preamp on 432 and 1.2.

2. How about slaving it to a low cost Icom HF xcvr, like a 707, with the
CIV16 unit for use as a 28mHz source for the
transmitting convertor?

3. Has anyone actually seen one? What was your impression.

2609. FodTrack

Newsgroup: rec.radio.amateur.space
Date: 1997-10-13 00:00:00 UTC
From: Rudy Pycke <in000824@innet.be>
Message-ID: <01bcd81c$e3de1e80$9e0d07c2@interpac.interpac.be>
Source record: 17877

I have some stability problems in using the Fodtrack rotator interface when running it under WIN95.
Who has the solution?

Rudy, ON6PY

2610. FS: Low prices on NOS Tubes

Newsgroup: rec.radio.amateur.space

I talk to Miles almost everyday on the local two meter repeater. That's where he is and why you can't hear him. His "defined" frequency is the 147.12 repeater in Billerica, MA.

You sure are envious of him aren't you?

2616. SPUTNIK MODEL LAUNCH DELAYED

Newsgroup: rec.radio.amateur.space
Date: 1997-10-14 00:00:00 UTC
From: Jon Dickason <dickason@dickason-pc.eng.mc.xerox.com>
Message-ID: <NEWTNews.876861441.16775.dickason@testclone.eng.mc.xerox.com>
Source record: 17787

saw this on the APRS mailing list:
>From the ARRL Letter, VOl. 16, # 40:
==========
SPUTNIK MODEL LAUNCH DELAYED

It now appears that the launch of a working model Sputnik 1 from the Russian Mir space station won't happen until October 18-20, and perhaps later. According to AMSAT News Service, the model Sputnik, assembled by students in Russia and equipped with a 2-meter transmitter by students in France, was to be aboard the Progress rocket that docked aboard Mir earlier this week. Earlier information from several sources--including the sponsors--had indicated the model satellite would be launched from Mir October 4, the 40th anniversary of the original Sputnik 1 satellite.

The Sputnik-40, as it's called, reportedly will be hand-released by the Mir crew during a space walk. Latest information indicates the mini-satellite will transmit a "beep-beep" signal on 145.800 MHz (FM) from its 200-mW onboard transmitter. The batteries are expected to last a month or two.

For additional details--and photos--see http://www.oceanes.fr/~fr5fc/spoutnik.html.--thanks to AMSAT News Service and Keith Baker, KB1SF

2622. NORAD Two-Line Orbital Element Sets (TLE080)

Newsgroup: rec.radio.amateur.space
Date: 1997-10-15 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <621507$ru5$1@blackbird.afit.af.mil>
Source record: 17793

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2623. NEW PRODUCT PRESS RELEASE

Newsgroup: rec.radio.amateur.space
Date: 1997-10-16 00:00:00 UTC
From: product@sparksintl.com
Message-ID: <6255jb$oct@sparky.iswnet.com>
Source record: 17794

For complete information, visit: http://www.sparksintl.com

NOW YOU CAN ENJOY THE DRAMATIC RESULTS OF LIPOSUCTION
OVERNIGHT. GUARANTEED.
WITHOUT SURGERY.
WITHOUT PILLS.
WITHOUT STRICT DIETS.
WITHOUT RISK.

Last month alone over 20,000 men and women
rubbed in our revolutionary herbal gel and lost
excess fat overnight.

Every three months
a random sampling of customers
substantiates these statistics of success:

a) the average minimum fat-loss per area (i.e,
stomach, hips or thighs) is ONE INCH

b) the average maximum fat-loss per area is
1-1/2 INCHES

We are now introducing this breakthrough
product to the world.

HOW OUR PRODUCT COMPARES TO OTHER PRODUCTS ON
THE MARKET...

1. It removes excess fat immediately, within
24-48 hours.

2. 100% GUARANTEED. If you do not lose a
total of TWO INCHES in your three fat-prone
areas -- stomach, hips, and thighs -- we will refund
your money in full.

3. It liquefies fat naturally with common, European
herbs that have been used safely for centuries

4. It's 100% safe, 100% herbal, 100% hypo-allergenic.

5. Quick and easy to use.

6. No side effects, no after-effects, no strange
sensations - just great results!

7. It creates REAL FAT LOSS; it's not a temporary
water-loss trick. The fat stays off forever -- as

long as you maintain sensible eating habits.

8. Affordable even for people on a budget.

FOR COMPLETE INFORMATION ON:

Source record: 17795

I heard one can do this by clipping the device to the antenna
and i think the negitive (-) side of the battery.
i want to make it recieve differnt Freq. s and maybey transmit on them
too. i know about the FCC and licenseing stuff so i will keep the power
down :)
i'm new in radio stuff so please use simple terms and maybey
scematics (i can read those :>)
thank you in advance.

Bob,

Check the Amsat web page. They have the mod for the 790 for 9600
baud. It is a very simple mod.

You can also find it on the Amsat ftp server at:
ftp://ftp.amsat.org/amsat/mods/ts790mod.txt

2626. Wxsat geographic overlays?

Newsgroup: rec.radio.amateur.space
Date: 1997-10-17 00:00:00 UTC
From: STEVE MEIER <N9JGQ@worldnet.att.net>
Message-ID: <6295gm$7n8@bgtnsc02.worldnet.att.net>
Source record: 17797

Hi. I'm using WXSAT and JVFAX for my polar orbit pictures. Is there a way to
overlay borders/coastlines to my received pictures. I know there are commercial
programs that decode and overlay borders but they co$t too much as far as I'm
concerned. Thanks....Steve

MONDAY OCTOBER 20, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* UoSAT-OSCAR-11 NEWS *
======================
During the period 30-Sep-97 through 14-Oct-97, good signals have been
received from UoSAT-OSCAR-11's 145.826 MHz VHF-FM beacon. The gap between
this report and the last one is due to holidays. Telemetry has been nominal.
The battery voltage has been steady at around 14.0 volts.

The internal temperatures have continued to increase due to a reduction of
solar eclipses. The battery temperature is now 17.0 C, and the telemetry
electronics is 14.2 C. One consequence of the increased temperatures is
that the VHF-FM beacon power decreases. It is now 260 mW compared with
375 mW at the start of July. Over this period, the beacon temperature
increased from 1.8 C to 17.2 C. The S-band beacon is not affected in
this way, and the telemetry indicates that its power output has slightly
increased.

The WOD survey of channels 10, 20, 30, 40 (+Y, -X, +X array currents, array
voltage) dated 03-Sep-97 has now been replaced by channels 17, 18, 27, 28
(+X, +Y, -X, -Y facet temperatures), dated 16-Sep-97.

A single AMSAT-UK news bulletin dated 21-Jun-97 by Richard, G3RWL, has been
transmitted by the beacon. This featured the Sputnik-1 40th anniversary,
Mir frequencies, RS-10 news, and the Keplerian elements for OSCAR-11.

Reports of the Mode-S beacon have been received from Stan W3QBK, Fernando
LU1HKO, and Andy VK5LZ. Andy uses a VK5WA converter, and estimates the
signal level at -150 dBm. He gets DOVE at -130 dBm.

The operating schedule is unchanged.

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)

ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The Mode-S beacon is ON, transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and is delivering only half power. Any reports of reception on 2401 MHz would be most welcome, and should be directed to Clive Wallis at: g3cwv@amsat.org.

The 435.025 MHz UHF beacon is normally OFF. However, it can sometimes be heard when the satellite is being commanded by ground control (ie. within range of Guildford, UK). When the 435 MHz beacon is transmitting, the 145 MHz beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit a Web sire created by Clive Wallis, G3CWV. The site contains some software for capturing data and decoding ASCII telemetry and WOD. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded as new data is captured. The URL is:

http://www.users.zetnet.co.uk/clivew/

* SCI-TEKNOFEST '97 NEWS *
==========
The Trinidad and Tobago Amateur Radio Society will be participating at the National Science and Technology Fair "Sci-Teknofest '97", sponsored by the National Institute of Science and Technology from 24-Oct-97 through 02-Nov-97 9Y4NED will be operating on KO-23, KO-25 and UO-22 and welcomes messages from all. School groups will be visiting from from 13:00 UTC each day.

[Info from Noel, 9Y4NED via KITSAT-OSCAR-25]

* CASSINI LAUNCH SUCCESSFUL *
==========
ESA's latest and farthest venture into the Solar System began at 10:43 Paris time on 15 October. The American Titan IVB/Centaur launcher sent NASA's large Cassini spacecraft on its way to Saturn. Cassini carries ESA's probe Huygens, as well as the high-gain antenna provided by ASI, the Italian Space Agency. In 2004, ESA's Huygens probe will plunge into the thick atmosphere of Saturn's largest moon, Titan.

About 500 representatives of the scientific, engineering and industrial teams in Europe, which created the Huygens Probe, were present at Cape Canaveral for the Cassini Huygens launch. They saw the powerful boosters of the Titan launcher light up the pre-dawn sky.

The launch sequence concluded with the completion of the second firing and separation of the Centaur upper stage rocket. NASA's ground station at

Canberra, Australia, obtained good signals from Cassini an hour after launch.

The European Space Operations Centre (ESOC) at Darmstadt will monitor the condition of the Huygens spacecraft. Their report is expected in 8-10 days' time.

The next major event will be the swingby of Cassini Huygens at Venus on 21-Apr-1998. This is the first of a sequence of "gravity-assist" operations at Venus, the Earth and Jupiter, to accelerate the spacecraft towards its destination.

* OMAN VIA SATELLITE *
======================
Members of the Whitton Amateur Radio Group will be visiting Muscat, Oman from 16-Oct-97 through 28-Oct-97. The group will include 3 satellite operators and will be active on satellites from the Headquarters station of the Royal Omani ARS. Activity will be via OSCAR-10 and RS-15. The group will be participating in the SSB leg of CQWW and have previously operated as ZC4EPI and C56DX via AO-10 and AO-13.

I currently have a UBC9000XLT scanner and I hope to purchase a short way radio in the near future. Initially it will be listen in to the world but I may want to try and do some Astronomical work. I'm not sure what and whatever it was it would be simple stuff but I would appreciate anyone pointing me in the right direction so that I don't have to upgrade shortly after.

I have not a lot of money so please keep that in mind.

Thanks
Kind Regards Clive

143.625 is not a ham downlink. It's a ground control comm freq.
The uplink over the U.S. is 145.985. Most of the time they are in packet mode
however.

2634. Hiking

Newsgroup: rec.radio.amateur.space
Date: 1997-10-19 00:00:00 UTC
From: Dwayne Rich <drichff@worldnet.att.net>
Message-ID: <62e3h7$p4g@bgtnsc02.worldnet.att.net>
Source record: 17805

Guys I am planning on hiking the Appalachian Trail in the spring of 2000. What does this have to do with ham radio? Please read on. I have hiked portions of the trail before and I would like to carry a ham radio station with me to be able to make voice contacts and send messages back either through the NTS,Packet,, or local hams that have satellite capabilities. I am looking at three possible options.
1) A small hf rig that may be able to hadle pactor,amtor,or g-tor
2) A small vhf packet/aprs station
3) A small satellite station.

Question does anyone have any information or experience about assembling a small satellite station (say 3-4 pounds or less) that could be used to contact hams via satellite? If you have any information on what could be used in either of the three cases above please email me. If you know of anyone in the raleigh,nc area that could help me decide on what equipment to purchase and help assemble a station it would be greatly appreciated. I am hoping to foster the spirit of ham radio while on the trail by allowing third party traffic if at all possible. Thanks for any of your help guys

Dwayne

2636. 1.2g vertical antenna?

Newsgroup: rec.radio.amateur.space
Date: 1997-10-20 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <344cca1d.567092@news.mindspring.com>
Source record: 17807
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.space

There seem to be few antennas available on the market for 1.2g (23cm). I would like to put only one (1) antenna for 1.2g on my boom and have it handle both my SSB/data modes via P3D and also ATV on a local repeater (when I want to work ATV) which requires vertical polarization.

QUESTION: If I get a high gain yagi or loop yagi antenna for 1.2g and mount it so it is vertically polarized will it work ok on P3D? I know it would work fine for my ATV needs. But will it do 'double duty' for me?

2637. NORAD Two-Line Orbital Element Sets (TLE082)

Newsgroup: rec.radio.amateur.space
Date: 1997-10-20 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <62gm9r$d45$1@blackbird.afit.af.mil>
Source record: 17808

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2638. Fodtrack satellite tracker

Newsgroup: rec.radio.amateur.space
Date: 1997-10-21 00:00:00 UTC
From: Rudy Pycke <in000824@innet.be>
Message-ID: <01bcde08$dae55ae0$1dc9140a@innet.innet.be>
Source record: 17809

Who has good results with Fodtrack under Windows 95?
On my PC the tracking is not stable under Windows: sometimes the program
sends wrong values to the interface.
Who can give some hints?

Rudy Pycke

The Sputnik 1/3 scale, PS-2, will be RS-17 when released,
according to sponsor's web page. Listen on 145.82 FM
(145.80-145.85 for doppler?). Date of release has again been
pushed back to November 3rd, during the next EVA (spacewalk) from MIR.

2643. VANGUARD ELECTRONIC LABS

Newsgroup: rec.radio.amateur.space
Date: 1997-10-24 00:00:00 UTC
From: hamdan@ix.netcom.com
Message-ID: <62osre$4n3@dfw-ixnews6.ix.netcom.com>
Source record: 17814

I have been active on the amateur satellites for a few years now, and would like to get into receiving weather satellite photos directly. I would like to purchase a Vanguard WEPIX 2000B (described on page 3-5 of the "Weather Satellite Handbook"). However, I have tried calling Vanguard Labs, e-mailing them (their web site is active though it hasn't been updated since March, 1997), and faxing them (no response). Does anyone know if they are still open for business? And regardless, does anyone have one and have comments on its quality and ease of operation. In case Vanguard went down the tubes, does anyone have a Hamtronics Weather Satellite receiver, and if so, what do you think of that radio?

Thanks much for your help.

* MARS PATHFINDER MISSION STATUS *
==================================
The Mars Pathfinder operations team is continuing its efforts to reestablish communications with the Pathfinder lander. Although they are experiencing communications difficulties, the team is confident that the spacecraft is still operating on the surface of Mars, according to Mission Manager Richard Cook. The last time they were able to send a command to the Pathfinder lander instructing it to transmit a signal back to Earth was on Sol 93, which was Tuesday, 07-Oct-97 at 14:21 UTC.

Team members suspect that the spacecraft may not be receiving commands from Earth properly because the lander's hardware has become much colder than normal. In regular operations, when the lander's transmitter is turned on, spacecraft hardware warms up sufficiently to operate normally. Since the transmitter has not been on for several days, engineers suspect that temperatures within the lander are considerably colder than normal. Predicted internal temperatures drop to as low as -50 C (-58 F) in the early morning and only rise to about -30 C (-22 F) in the late afternoon. These temperatures are about 20 C (38 F) colder than the coldest previous operational temperatures.

The lower temperatures cause the spacecraft radio hardware to operate outside the range of radio frequencies that ground controllers have used in the past. During the past three weeks the operations team has been transmitting to the spacecraft at a lower frequency and sweeping through a wider frequency range, a technique that has been used on other missions to attempt to cause the spacecraft receiver to lock on to the transmitted signal. Once ground controllers finish this, they send commands instructing the lander to turn on its transmitter and send a signal back to Earth.

To be certain that they investigate all possibilities, team members are also consulting with experts knowledgeable about the radio and other key

elements of the spacecraft. They have identified some new scenarios that are being pursued to regain communications. These recommendations include doing more testing of the engineering model hardware in the laboratory to better understand how the spacecraft might be behaving. Another recommendation has suggested shifting and increasing the range of frequencies being swept through much more than previously attempted.

According to Project Manager Brian Muirhead, the possibility exists that an unrecoverable problem may have occurred. Team members expected that, once the lander's onboard battery died, cold and thermal cycling could result in a failure of some other element of Pathfinder and thereby end the mission. "However, the Pathfinder project is funded to continue operations until August 1998, and the team will continue to do everything possible to reestablish communications until all options have been exhausted," Muirhead said. The mission has already exceeded all of its goals in terms of spacecraft lifetime and data return.

The science team, meanwhile, continues to process and analyze the large volume of data sent back by Pathfinder's lander and rover. Further science products are planned and new results will continue to be presented as they develop.

* MIR NEWS *
============
The current Mir crew is still very busy working and experimenting in their Lab in space. American Astronaut David Wolf, who is currently living on board the Russian Mir complex, said he is working 14-16 hours a day. Judging by the tone in his voice, he is enjoying every minute of this stay. During an Amateur Radio contact with David Wolf, Miles Mann, WF1F asked when he thought he could put the Amateur Radio 2-meter station back on the air. David said he had 6 items on this top priority list, and Amateur Radio was currently number 6. Miles assured David that everyone on earth understands his current work load, and that the Amateur Radio experiment (Personal Message System, PMS) is a low priority experiment. David said he would like to move the PMS experiment higher on this list of things to do. He said he is planning on reading the existing 40 mail messages waiting for him when he gets some free time. He is also planning on putting out a mail message to "ALL" on the PMS when he gets some free time.

In the mean time, the PMS 2-meter station has been turned off. The small 13k mailbox is completely full. The amount of time required by the crew to read, reply and delete the daily load of mail is approximately 30 to 60 minutes per day, just to keep the mailbox open for the public. At the present time, the crew's work load is just too heavy to support this type of time investment towards a non-essential project.

There are a few inconsiderate Amateur Radio stations who feel the crew's primary job is to read and reply to packet mail all day long. Most of us understand this is not the crew's job.

The SAFEX II 70 cm repeater is still turned off. It is not known when the this experiment will be turned back on, but we do know the crew is still trying to build up power reserves in the batteries of the space station. The space station is now getting power from all solar panels, except the one that was damaged by the Progress truck collision.

The crew performed an internal space walk last week. The crew repaired 5 data cables, and attached them to the special air tight feed through connectors on the new Specter hatch. (Experiment: Put on your thickest snow gloves and winter jacket. Then try to install a new coax connector on a cable. This is what is was like trying to repair the data cables on Mir.) The crew now can remotely steer two more of the Spectr module solar panels. An external space walk is planned for some time between October 30 and November 1. There are three more Space walks planned this year.

[Info via Miles Mann, WF1F]

Hello All;
I'm selling a "like new" Rf-Concepts 4-110 Pre-amplified N/conn
10w-in 100-110w-out 70cm amplifier with all orignal boxes & docs.
Worked the satellites with this amp & a fantastic preamp. Reason
for sale is strictly financial. I am asking $275 + shipping OBO.
Please re: me via email: n2rif@amsat.org Or Packet
N2RIF@WM2F.#SNJ.NJ.USA.NOAM. You can also try
calling but my phone is usally busy. My ph# is 609-386-9382..
Thank you for reading my bulletin. Thomas J or just T.j. -73

2647. FS: DSP-2232 Reduced w/Warranty

Newsgroup: rec.radio.amateur.space
Date: 1997-10-26 00:00:00 UTC

Message-ID: <01bce20d$c8d0a360$f08d56cf@Kwiknet.ppp>
Source record: 17818

Hello All;
I am selling "like new mint" AEA DSP-2232 Digital Signal Processor
"Mutli-Mode Data Controller" few months old still under TW warranty
With all original boxes, docs, warranty card, receipt and etc. There is
absolutely nothing wrong with this unit and is basically new out of the
box. Reason is: I am selling all my satellite and amateur gear because
of seriously major financial problems. No More... No Less
Please Re Me Via: email n2rif@amsat.org Or
Packet N2RIF@WM2F.#SNJ.NJ.USA.NOAM.
You can also try calling but my phone is usally busy.
My ph# is 609-386-9382..
I am asking $445 + shipping obo.
Thank you for reading my bulletin. Thomas J or just T.j. -73

P.S. I have stated about TW not sending any of these out nor
selling them at $499 but it appears I have been lied to by TW.
So I am dropping the price. I paid $599.95+shipping just a few
months ago but I guess I've had the "u know whats" put to me.
Such is life I guess..

I realize this is probably annoying because it should be a FAQ but
Ive lurked for a few weeks and not seen such mentioned....
is the MIR still using it's UHF repeater at all and has it changed
frequencies ? and what is coming down from there ? packet ?
voice ? have not heard any simplex packet either tnks/ kf4gfj

RS-12 is now in mode A. Uplink 145.910-145.950, downlink 29.410-
29.450. Its my understanding that this change was made due to the
failure of RS-10. I have worked 12 a couple times since it changed
to mode A, and it seems to be about the same as 10 was.
Good luck and 73, Bruce WA4JAV

Yeah, the contract was cancelled, AMSAT was not asked to supply concrete, and it looks like it'll go up on a later flight (where the probability of success will be higher for all concerned).

-uplink/downlink frequencies? Many thanks and 73,
-Mike - KE0WW,
-Minneapolis

This is correct. Apparently the 15 meter uplink was
shut down because 15 meters is beginning to "wake up"
on a regular basis. A few weeks ago a message came
about warning those using the 15 uplink to LISTEN before
they transmit to avoid interfereing with ongoing QSOs.
For now RS-12 is operating in Mode-A.
The frequencies are a bit different from those of RS-15.
I'm sorry I can't remember what they are at the moment.
Perhaps someone else can post them, or if you can wait
I have then written down on a "posty" in my shack. I'll
send them to you this evening.

It's not power so much as it is more pressing repairs and chores. They WILL
be back on the air! Could be anytime now so keep your ears open!

73!

The site http://www.iw7chv.org has been modified. For who already knows
about it will find really interesting news, explained with a functional
graphics to quickly understand what are the services offered. I say
someone for who go to see it the first time:

- HamRadio Search Engine: with over 10000 entries is the most complete
HamRadio Search Engine. You can search/add/modify your URL. It's also
possible to put a banner the first page of the gate.

- Internet <-> Packet Link: You can send mail between Packet Radio
Network and Internet. The service is in testing way..test it.

- Internet Radio gateway: you can browse the gate reading the Packet
bulletins around the HamRadio World.

- TOP 10 HamRadio Site: TOP 10 permit you to vote your favorite Ham
Radio URL and suggest your one.

An more ... HamRadio news, POWWOW community, meteo page, etc. ...

For better information write to:

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up satellite schedules to contact hams all over the world.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

Visit http://www.sarrio.com and estabish your own cybersched

2665. Arianne 502 successfully launched

Newsgroup: rec.radio.amateur.space
Date: 1997-10-30 00:00:00 UTC
From: tuffenuph@aol.com
Message-ID: <19971030224900.RAA29933@ladder01.news.aol.com>
Source record: 17737

Arianne 502, originally scheduled to carry AMSAT Phase IIID
into space, launched successfully on 30 Oct 97 carrying
several dummy payloads and a small scientific payload.

CNN has a good article on the launch at
http://www.cnn.com/TECH/9710/30/ariane.launch/

2666. Ariane 502 Launch?

Saw an announcement in (sci.space.announce?) stating that it did launch,
and as of 15 minutes into the flight everything was green.

Hopefully P3D will be on the next one (cross fingers).

If the page is named ariane.launch, do you think the rocket is named arianne?
No, it isn't.

The launch was, although less catastrophical than the 501 launch, not
completely successful either.

Maybe you'd get more donations if ARRL, would stop excluding
people by demanding they learn morse code.... Idiots ! I hope
your satellite blows up on the pad ...

Maybe then all the old men who whine about their latest operation
at the hospital would step aside and let the next generation of
ham operators update the hobby into the 21st century (where morse
code has outlived it's usefulness).

What does ARRL have to do with AMSAT? With Phase 3D?
What does morsecode have to do with VHF/UHF licenses?

I think *you* are the idiot.

Another intelligent and considered argument from the 'No Code' lobby.

Is this supposed to have something to do with AMSAT or satellites?

No, I'm not prepared to even *know* how much another agency
would be charging us. I haven't seen any discussion about the
subject coming from AMSAT. Why do you ask? Are you interested
in becoming my financial adviser or are you just being sarcastic?

As for "worse and worse", look to the thread "Arianne 502
Successfully Launched" and read the post from Rob Janssen.

"Delicate" negotiations that have to be kept secret might
not be in the best interest of the AMSAT members.

* ARIANE 502 LAUNCH SUCCESSFUL *
================================
Several news sources sources have reported that the second flight test of the
Ariane 5 launch vehicle (Ariane 502) was a success, and ESA has reported it
as such. These same reports have also stated that the upper stage payloads,
the two MAQSATSS (B and H), have been separated and deployed into a
geostationary transfer orbit as planned. Early accounts noted that the
launch was initiated at 1343 Universal Time today October 30, 1997.
from the European Space Agency's Kourou launch facility in French Guiana,
South America.

Ariane 502 carries three payloads. Two are (MAQSATs B and H) which are
instrumented payloads designed to simulate two large geostationary
satellites as well as to measure the Ariane 5 flight environment.
The payload also included a smaller satellite, called TEAMSAT. TEAMSAT
is an experimental scientific satellite. No word has yet been received
rgarding its successful deployment or operation. No Amateur Radio
satellites were aboard.

The AMSAT Phase 3D spacecraft, currently nearing completion, was to have
flown on this flight test of the Ariane 5 series. However, in August, ESA
removed P3-D from the AR-502 manifest when it became clear that needed
structural modifications to the P3-D spaceframe would not be finished in
time to make the AR-502 launch and the Phase 3-D completion
schedules compatible. The modifications came as a result of ESA's
discovery that launch loads on the AR-502 flight might be significantly
higher than ESA had first anticipated.

AMSAT officials believe that it still too early to know what the effect
Ariane 502's now apparent success will have on the subsequent Ariane
schedule, on the possible Phase 3D launch, or the vehicle on which it will

ultimately ride. However, it was anticipated that a successful AR-502 flight would give ESA added flexibility in scheduling a subsequent launch for Phase 3-D on a future Ariane flight.

AMSAT-DL President Karl Meinzer DJ4ZC and AMSAT-NA President Bill Tynan W3XO, expressed their great joy and relief on hearing the news. In a joint statement they said, "After the failure of Ariane 501 in 1996, we at AMSAT-DL and AMSAT-NA were, quite naturally, very distressed to hear of that unfortunate occurrence." "This subsequent success of the Ariane 502 flight puts ESA's Ariane 5 program back on track and, even though we were not aboard this time, is very good news for us."

On behalf of the Amateur Radio satellite community, both AMSAT Presidents extend their sincere congratulations to ESA, Arianespace, CNES as well as to the members of the TEAMSAT Project.

[Info via Bill Tynan, W3XO, AMSAT-NA President]

* MIR NEWS *
============
The current Mir crew is still very busy working and experimenting in their Lab in space, but they have had a few moments to chat with the public via 2-meter Amateur Radio. A few times last week David Wolf was active on 145.985 FM simplex voice, and the packet PMS was also active for a day. American Astronaut David Wolf who is currently living on board the Russian Mir complex said he has been going to bed at midnight every day. Judging by the tone in his voice, he was enjoying every minute of his stay.

The Amateur Radio experiment (Personal Mail System, PMS) is a low priority experiment. The crew has been too busy with other experiments to devote much time to the mail box. However, David reported to Miles Mann, WF1F that Paval did try to connect the Lap top to the packet radio TNC on 28-Oct-97, but was unable to get the terminal program properly configured. David expects the crew will have a little more free time after this weekend's space walk. Anatoly and Paval will exit Mir early Monday morning to perform the EVA. One of the projects scheduled for this EVA is the launching of the Sputnik Amateur Radio Satellite. David reported that he been testing the Sputnik satellite and has used the Kenwood TM-733 transceiver to listen for the Sputnik's beacon during a test. There were some conflicting reports about the satellite's beacon frequency, so Miles Mann asked David if he remembered the exact frequency, but he was not sure. Then Miles called the Chief of the Amateur Radio Cosmonaut Department in Moscow and asked Sergej Samburov for a status update of the Sputnik. Sergej stated the plan is to launch the Sputnik on Monday morning around 5:00 am Moscow time (02:00 UTC). Sergej said the beacon frequency will be 145.820 MHz FM. Anatoly will perform the hand launching of Sputnik, and Paval will take pictures from outside. David Wolf will be inside Mir, and he will also be taking pictures.

A special QSL card is available to anyone who copies the beacon from the Sputnik satellite. Envelopes should be well sealed and not include cash. Send an SASE and an IRC coupon to the address below, and do not make any

visible notes on the outside of the envelope with Amateur Radio callsigns. Note that Dave Larsen, N6CO, will not be handling SWL cards for Sputnik. Please use the following address:

Sergej Samburov
PO Box 73
Kaliningrad-10 City
Moscow Area, 14070, Russia

In the meantime, the PMS 2-meter station can be expected to be off most of the time. The small 13k mail box was purged of most mail last week. David does not have time to issue personal responses to each station, but he does have a list off all callsigns who sent him mail. The tentative plan is to send out a message addressed to "ALL" thanking everyone for their support including the callsign list of those who sent messages to Dave.

The amount of time required by the crew to read, reply, and delete the daily load of mail is approximately 30 to 60 minutes per day. At the present time, the crew's work load is just too heavy to support this type of time investment towards non-essential projects. It is hoped that everyone understands this situation.

[Info via Miles Mann, WF1F / MIREX]

* FALCON GOLD SATELLITE LAUNCHED *
==========
On 24-Oct-97 at 06:46 UTC, an Atlas-Centaur rocket was launched carrying the Falcon Gold mission payload. Falcon Gold is a satellite designed and built by Air Force Academy cadets in conjunction with the University of Colorado-Colorado Springs.

The US Air Force Academy is the first undergraduate institution to get a live satellite in orbit, and Falcon Gold is the first presence of a GPS receiver above the constellation. Data is being made public as it comes available, and post processing at USAFA facilities is in progress.

On Monday, a Navy ground station succeeded in downloading the first bursts of data from the satellite. After digging out of the Denver snow storm, logging of spacecraft data took place using a 60' dish at the DSES facilities northwest of Boulder, Colorado.

Amateur Radio listeners from around the world have expressed interest in the satellite, and several satellite or moon-bounce stations are coming on line. Stations from the US, France, Astralia, and England have contacted the USAFA for information, and the USAFA is waiting for the first log from an overseas station. Data format is standard AX.25 9600 bps.

For information is available via the Internet at the following URL:

http://www.pcisys.net/~mork/

What does ARRL have to do with AMSAT? With Phase 3D?
What does morsecode have to do with VHF/UHF licenses?

I think *you* are the idiot.

Maybe you'd get more donations if ARRL, would stop excluding
people by demanding they learn morse code.... Idiots ! I hope
your satellite blows up on the pad ...

Maybe then all the old men who whine about their latest operation
at the hospital would step aside and let the next generation of
ham operators update the hobby into the 21st century (where morse
code has outlived it's usefulness).

So, let me get this straight.

Morse code is to blame for people not sending in donations to support
this new technology, and because these people are not sending in
donations, its morse code's fault that ham operators are not "updating"
to the 21st century.

Right. Got it.

I wasn't aware the USPS required hams to use morse when sending a letter.

Are you prepared to kick in the cost difference between what ESA are
charging us, and what another agency might charge us? Don't forget the
zeros...

AMSAT and ESA agreed not to discuss P3D's launch until after 502's
flight - hence the lack of information. Now that 502 has happened,
there will be more negotiations, but they may also be delicate, and
not to be prematurely blabbed around the world.

What aspects of ESA's record look "worse and worse"?

Another intelligent and considered argument from the 'No Code' lobby.

Is this supposed to have something to do with AMSAT or satellites?

Dear Keith:

I have been told by a variety of people that Vanguard is out of business. I have their address is you want it. Their phone does not answer, they don't answer their e-mail or their faxes. At any rate, if you want the info I have, I'll send it to you. Also, if you find them, please e-mail me, because I'd like to get one of their receivers.

>I knew about the issues with the orbit quite early on, in detail.
>I am not prepared to trash ESA or the Ariane 5 project because of
>it - this was a test flight, and this is why they do it.

Also note that I am not trying to bash ESA/Arianespace reputation. There
was a problem with this launch, but it was a qualification launch and
it will certainly be evaluated in much detail. "we" can consider ourselves
lucky that P3D was not on the launch, or we could have lived with the
lower orbit. It is not so bad that it would re-enter.

Of course, most participants in discussions like this have a completely
unrealistic view on launch possibilities and failure rates. I find it
disturbing that people who don't even know how to spell Ariane think they
can state that it has a bad reputation.

Uh, what's the history of the whole sad story here, eh?
Lemme guess:

Amsat builds satellite, but not ready for rocket that explodes.
Amsat has to store satellite in expensive refridgerator while waiting.
Amsat decides to tweak satellite while waiting.
Another rocket is suddenly ready, Amsat is not.
Rocket flies, Amsat doesn't, but rocket fails to hit apogee.

Can't we make some sense out of this? I'm not sure that this does:

>AMSAT is a nonprofit corporation that designs and builds satellites.
>

This brings up a question I have had in mind for quite some
time.

Could the basic satellite made by them be used in other fields
of exploration. For instance using the control/power module
as a base for a photo/survey probe to be sent to other planets.

I realize that the power is by solar cells so there is a limitation
on that factor.

But could you use the basic satellite in building relatively cheap
exploration probes for the Moon, Mars or close asteroids where
mission time would be rather short (no more than a few years)??

2700. Spoutnik 1

Newsgroup: rec.radio.amateur.space
Date: 1997-11-03 00:00:00 UTC
From: harrymue@juno.COM
Message-ID: <19971103.085313.3998.2.harrymue@juno.com>
Source record: 17772

Hi all,

Well it sounds like Spoutnik 1 is alive and well.
I heard it for the full pass this morning here in
Tulsa, Oklahoma USA November 3 @ 1402-1411 UTC on
145.820 mhz. I am using a Cushcraft 10-ele vert/horiz
@ 30 feet with no elevation rotor and no preamp into
an Icom IC-271H. Spoutniks signal was 5/5 on both
vert. and horiz. polarization with no fading.

Congratulations are in order to all the students,
support personnel and the MIR crew for a job well done.
Hearing the "bird" takes me back to the 50's when I
listened to the original Spoutnik and when I first got
interested in Amateur Radio.

Again, CONGRATULATIONS!!!

73...Harry Mueller, KC5TRB in Tulsa, Oklahoma USA

Interesting about the fading; I saw on the very early news a few
seconds of
film on the Mir EVA that also showed the satellite in the background, and
it was
tumbling like crazy. Havn't had a chance to hear it myself yet, can't
wait! Dan WA7TDZ CN92 Oregon

Thanks for the confirmation of tumbling. I heard it this afternoon (CM87)
on two passes and both times, heard cycles of 4-5 beeps followed by one
faded or absent beep. Yaesu FT5100 with a homebrew quarter-wave.

-- KD6PAG

P.S. No packet today, and no response from the MIR repeater yet.

2703. RS27 heard times

Newsgroup: rec.radio.amateur.space

Site License puts Simulation & Synthesis on Every Desktop

For general analysis with noise capability, filter and structure
synthesis, and system and receiver engineering support, the
Webb Laboratories Professional Partnership Program is
unprecedented:

http://www.webblabs.com/pp.htm

The one-time $975 investment in the PP Program will drastically
reduce your annual software budget, freeing up dollars for
other needed equipment and analysis support tools. The
larger your company or organization, the lower the PP Program
cost on a per-user basis - the $975 licensing fee is for site-wide
use, and there are no annual fees! More information available
on request - free shipping worldwide!

Kathy Goerg
PP Program Coordinator

Heard here in the UK this morning (4th Nov, 10.21 GMT), using an FT-480R
on a triband vertical (5/5) and on an IC-821H with a 5 el horizontal
(5/9+60 with the preamp).

It seemed to be about 1.5 min behind the predicted pass for MIR.

On the next pass I tried my scanner using its own telescopic antenna and
the signals were received up to S3 outdoors and hearable with no signal
strength indicated when indoors.
>
>Congratulations are in order to all the students,
>support personnel and the MIR crew for a job well done.

I second that. In spite of all the problems the ageing MIR has they
still find time to encourage the spirit of adventure.

2708. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1997-11-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <63nkru$a3m$1@blackbird.afit.af.mil>
Source record: 17683

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

Use the MIR Keps.... It is close enough, at least for now.
I found Sputnik-40 about 1 or 2 minutes behind MIR's predicted path.
Maybe I need more recent Keps for MIR or maybe it really has separated some.

Overkill! :-)

I picked it up on a discone! DN70jb, 14:04-14:09Z
It did fade in and out but usually well above the
noise floor. At the start of pass the signal
centered on 145.823 MHz; when I lost it the signal
was centered at 145.817.

Ditto!

Now, about QSLing the thing... just how do I do that?

I fired up my old TRAKSAT program and noticed that MIR (with Spoutnik alongside) would be making a very convenient pass over my location at around 1136 UTC (6:36 AM local) 4 November. I quickly pulled out a 2 meter receive converter and hooked it up to my trusty Drake 2-B. Antenna was a hastily deployed 2 meter vertical dipole supported by my bicycle and a broomstick!

Heard Spoutnik 1 right on time. Signals were very strong throughout the nearly overhead pass. Didn't notice any signs of spinning or fading. Doppler shift was quite pronounced but easy to deal with. I recorded the signals for replay at the next meeting of my local radio club (Vienna Wireless Society).

What is the significance of the number of beeps being transmitted?

This was all lots of fun. Congratulations to those who put it together and to the Cosomnauts who deployed it.

FYI, there are WWW pages concerning the subject which can be
found at http://www.oceanes.fr/~fr5fc/spoutnik.html (in French).
They haven't included yet (05/XI/1997, 09:30 UTC) the news
of the launch.

vy 73 de DG0LFH/p, Jan-Martin, Lindau (Eichsfeld), Germany

PS: just heard the signals of the model sputnik around 09:20 UTC.
My congratulations to all who were involved in the project!

.ask and ye shall receive...
I received these this morning, I assume they are official although
the RS-17 designator is not. I believe it is officially PS-2.

Hi all:

I am looking for information on the Spoutnik, which is floating around
in space for the commemorative. Specifically, I need an address to send
my report to. Please reply to email address.

Thanks and 7-3,
Erv KB8TNQ

As I understand it, the Europeans go one way and we Americans go the
other. It will need to be standardized when P3D goes up.

Mike:
Being the Cosmonauts "tossed" the satellite out of MIR's hatch, you can
use MIR's keps. Sputnik will be designated as RS-17 in the upcoming
days. Bear in mind that Sputnik's batteries are only expected to last
about a month. 73's-

Rick, N8CZA

Erv:

There are two addresses, one for the radio builder, and one for the
satellite builder. Here they are:

Radio:

Radio Club FR5KJ
College Jules Reydellet
103 Rue de la Republique
St. Denis, Cedex 79489
Reunion Island

Satellite:

Sergei Sambourov
P.O. Box 73
Kaliningrad-10 City
Moscow Area, 14070 Russia

In both cases, send 1 IRC and an SASE. See ARRL Bulletin ARLS034.
73's- Rick, N8CZA

I believe you are supposed to tune whichever one is the higher
frequency. That is if you are transmitting on 70 cm. and receiving on
2 mtrs., you should tune the transmitter.

Hi all,

In Ham-Space Digest V97 #362 the posting from
Rick, N8CZA, concerning Spoutnik QSL cards,
part of the address for the French radio club
is different than what is listed on their web page.

Here is the mail address as
it appears on their web page;

FR5KJ radio club
103 rue de la Republique
97489 Saint Denis Cedex
Reunion Island

73... Harry, KC5TRB in Tulsa, Oklahoma USA

Quoted from MIles Mann

Hi Folks
The number are in.

Sputnik is flying approximalty 2km higher than the Russian Space
Station
Mir.
And Sputnik is now 2 Minutes behind Mir (Baised on Keps from Nov 4 at
17:30
utc).
(Your actual millage may varry)

Altitude
Sputnik Mir
Per 383 381
Apo 391 390

Mir Amateur Radio Status:
It does not take much to hear Sputnik, even a rubber duck on a good
day.
The Mir crew just finished their thrid Space Walk in two week.
Amateur Radio activity with the 2-meter PMS has been very limited du
to the
crews

Harry:
The address I posted came from the Buckmaster call server. Where is
FR5KJ's homepage? Gee....I hope they get my sig report and QSL ok.
Thanks for the input.

Rick, N8CZA

I don't know the whole story but initially P3D was supposed to go on Arianne
501 but was replaced by more important payload (DOH! :-)), it missed 502
because of a change in the P3D launching structure requirements... any news
of then new Sputnik that was supposed to be up on Mon.?

Radio Meteor Observation Bulletin No. 51 November 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Barcelona, Spain (01 59' E, 41 21' N)
Frequency: 48.250 MHz
Transmitter location: most likely Czech television C2 C. Budejovica,
100 kW, horizontal polarisation.
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
Antenna: astronomical azimuth 215 deg (=NE), elevation 0 deg.
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
Introduced 10 dB attenuator in the receiver from October 12,
13h UT onwards in order to reduce direct reception.
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (100 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT and
"Data Capture" software with 9 second/18 sampling interval to store
all the > 1.0 s signal increases.

Notes:
. ? probably affected by sporadic-E, direct reception
. Orionids between Oct 20-26

Enric Fraile Algeciras

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver

Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. no Draconids (Oct 8)
. Orionid activity between Oct 21-25
. local time = UT + 2 hours (summer hour) until Oct 25,
. local time = UT + 1 hours (winter hour) from Oct 26 onwards.

Pierre De Groote / comments by C. Steyaert

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 3 element Yagi, direction south, elevation 65 deg
Receiver: IC-706 at 53.76055 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km, direction south 2) a 30 kW TV video carrier from Sicilia, Italy, distance 900 km, south. Both transmitters are on the same frequency (+/- 10 Hz) and are processed within the same 40 Hz receiver channel. Several high mountains in transmitter direction prevent direct and tropospheric reception.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record the audio signal. 20 channels of 2 Hz width are used for meteor identification, pictures with interference, sporadic-E, E-layer and FAI propagation are manually rejected.

All meteor counts below are corrected for a full hour observing time. If the recording duration is 20-40 minutes, a dot is shown after the value. Data for less than 20 minutes observing time are not shown here.

Counts of reflections longer than 6.5 seconds: assumed to be overdense.

| Oct 1997
```

Notes:
. blank value means either few or no data available, interference,

sporadic-E or FAI propagation, or offline.
. the Orionids showed up very marginal. Have observed the Orionids now
in 1995, 1996 and 1997. The only really good Orionid shower was in 1995.
. no activity detected from the Draconids on Oct. 8, 1997.
. while September was without sporadic-E propagation, October turned out
to be very active! Lot's of sporadic-E, several times even on 144 MHz.
. local time conversion: 2 hours ahead of UT (04h00 UTC is 06h00 local)
until Oct. 25, later 1 hour ahead of UT.

Werfried Kuneth

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omnidirectional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observer are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575 (CW mode 500 Hz IF filter)
Antenna: 2 element Yagi, pointed to the zenith
Observing method: FFTDSP software,automatic data saving and manual count.

Notes:
-: lost counts because of high noise level or machine failure.
@: Hourly rate estimated by effective observation time less than 60 min.
n: Contamination due to interference.
e: Contamination due to sporadic E opening.
f: No data available due to TX failure or maintenance
JST = UT + 9 h

Hourly echoes over 10 dB SNR

------------------------------------------------------------------------
Observer: Chikara Shimoda
Location: Asahi, Nagano, Japan (137 51' E, 36 07' N)
Frequency: 81.4 MHz
Transmitter Location: FM-Japan 81.3 MHz, 10 kW, distance 180 km
Antenna: 5 element Yagi directed to the zenith.
Receiver: AM-FM Tuner (TRIO KT-1100)
Observing method: Meteor echoes output from center-tuning meter were
recorded on a pen-recorder chart.

2733. Radio Meteor Obs. Bull. Oct 1997 Orionids, no Draconids 2/2

Newsgroup: rec.radio.amateur.space
Date: 1997-11-07 00:00:00 UTC
From: steyaert@vvs.innet.be
Message-ID: <steyaert.144.3463A287@vvs.innet.be>
Source record: 17705

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 87.360 MHz
Receiver: Salora SRP-22 modified, narrow band FM (B=15 kHz).
detected signal level >-122 dBm.
FM detection, no pulse noise rejection required.
Antenna: 2 element Yagi with 4 dBd gain to SW, azimuth: 45 deg (SW)
Data sampling system: threshold triggering, sampling rate 64 ms.
Computer logs total hourly elapsed reflection time, number of
threshold crossings for the hour, the longest time the signal was
continuously above detection level for the hour.
Data stored in the Compact MS-Soft format. Software for viewing available
from FTP.FUNET.FI pub/ham/vhf-work/mssoft43.zip (420 K, new version!)

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

The WEB Page at: http://www.oceanes.fr/~fr5fc/angspoutnik.html

indicates that you should send your report to FR5FC.
It gives the address and indicates you should include
an International Reply Coupon (IRC).

FR5KJ Radio Club
103 Rue de la Republique
97489 Saint Denis Cedex
Reunion Island

Although some stations do accept E-Mail QSLs, this appears
to be a low-budget operation and they are trying so save
on the postage from Reunion Island.

Hi Everyone
I'am new to Sat. and just join Amsat, I purchaced a KCT and
Yeaue 5400B. After loading the drivers and setting Logsat too
track FO-22 the rotor always points down???? Can anyone help me with this problem? Orcan
you tell me where to look for info.
I will pay someone in the Kokomo IN. area to help me setup my
station.

I'm hearing Sputnik as I type at 1238UTC. She's not DFQ but loud. She also
seems to be very slowly spinning. Anyone else seeing (hearing) this?

I think in the really early days it was supposed to go on 501, but this
was changed to give the cluster sat builders an earlier launch and an
opportunity to lauch all 4 satellites in 1 launch. They are still thankful
for this preference :-) (I read some story by the Cluster guys about this
on WWW some time ago, a search on Ariane 5 and Cluster will probably find it)

They were talking about Phase 3D at the AMSAT convention in 1986.
That one went into the Atlantic. What was the year, vehicle, flight #?
Anyone remember?

You're thinking of P3A. That was the satellite which would have
become Oscar 10 if the booster hadn't failed. Oscar 10 was thus
P3B. P3C was Oscar 13. P3D is the latest and greatest of the
series.

It shows a lack of attention to detail. Somebody who hasn't done their homework, and whose other points may very well be suspect. Call me old-fashioned, if you must. But at least spell "la merde" (which does not refer to the excrement of any particular species, BTW) properly.

> ...The real test of ESA's reputation is what Lloyd's of London

I'd be surprised if they (or anybody else) would insure an Ariane 5 payload at all, since the rocket is still in development. It would be far more cost-effective to have parts available to build a replacement satellite. Do you have a source for this?

From: "Greg D." <gregd@jps.net>
Message-ID: <346532B1.5B38@jps.net>
Source record: 17717

Hi, folks,

I know that the *frequency* of the beeps from the Sputnik replica are an indication of the temperature inside the satellite, but the beeps seem to come in groups of various lengths. Sometimes there are 4 beeps, sometimes more, then a short space. It's not Morse code, but I assume it's for a reason (besides the obvious reason to generate lots of web postings).

What do the groups of beeps mean?

Greg.

p.s. Shouldn't it be named Sputnik-3? No's 1 and 2 were launched back in '57.

AFAIK, P3D was *always* scheduled to go on 502, but 502 was delayed about
a year due to the launch failure of 501. Analysis showed the structural loads
on payloads riding the Ariane V satellite bus would be greater than AMSAT had
been told, so AMSAT had to re-engineer the structure to handle the higher loads.
That couldn't be done in time to meet ESA's launch schedule for 502, so P3D
didn't go. ESA recognized that this was partially their responsibility because
of the structural load parameter change, so they released AMSAT from their
launch contract. So the launch money is still in the bank, and negotiations for
a new launch opportunity are in progress.

This is not a bad thing. First, the next launch vehicle will benefit from
lessons learned from 501 and 502, so it is likely to be a much more
reliable vehicle. Second, this allows AMSAT to continue to refine the
payloads on P3D. Thus our chances of getting a good satellite in a
good orbit have improved considerably. The only cost is that we have
to be patient a bit longer.

Sputnik II was hand launched from MIR and is beeping away on 145.820.
You can copy it with just a handheld, though of course a better setup works
better. It is approx 2 km above and behind MIR at this time, so figure on
hearing it just after MIR passes over. Doppler is about +/- 3 kHz.

Wow. So I misspelled Ariane as Arianne. BFD.

So everyone that referenced the title to the posting is not credible now
because they didn't fix the egregious spelling error? That's ad hominem
horseshit. Mard in french.

When one smells a rotten egg, one does not need to be able to
properly spell sulphur dioxide to correctly assess that it stinks like hell.

The real test of ESA's reputation is what Lloyd's of London thinks about
insuring a payload on the Ariane-V. I think they would tell you it has a
pretty bad reputation...

Greg,

I believe the irregular pattern of beeps is due to the satellite tumbling in space. It's interesting to compare the pattern of beeps on different passes (I've listened to 9 so far. number 10 is comming up in fifteen minutes!) Sometimes you get a simple pattern, sometimes a more complex one. You can usually hear the pattern change over the course of a single pass as the orientation between you and the satellite changes.

As to the name, I've heard it called Sputnik 40--for the 40th anniversary. I've also heard that it has yet to given an offical satellite designation.

Fun stuff, huh?

Kyle

Hi everybody.

Last week I watched on TV that the Russians had released a copy of the
Sputnik I satellite from the MIR Space Station

I'd like to know if it's possible, the frequency of the famous "bip bip
bip".

Thanks.

2758. Sputnik-40/RS-17 via HT and rubber duck

Newsgroup: rec.radio.amateur.space
Date: 1997-11-10 00:00:00 UTC
From: nungeste@sdd.hp.com
Message-ID: <64857o$7sg@news.sdd.hp.com>
Source record: 17532

I just heard Sputkik-40, or it's official name RS-17. It had a 40-degree elevation pass over San Diego and I could hear it fine on my Kenwood TR-2500 HT with a rubber duck antenna. Squelch was full-open but the beeps were easily discernible from the noise.

These are the keplerians I used:

RS-17
1 24958U 97058C 97308.73090523 .00032204 00000-0 39449-3 0 76
2 24958 51.6583 99.3826 0006309 271.4809 88.5478 15.60040373 160

Also, I noticed several rec.radio.amateur.space messages saying the frequency is 145.820 MHz. The website at http://www.oceanes.fr/~fr5fc/angspoutnik.html says the correct frequency is 145.825 MHz, although I doubt it matters much.

2759. NORAD Two-Line Orbital Element Sets (TLE094)

Newsgroup: rec.radio.amateur.space
Date: 1997-11-10 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <6486ug$2kf$1@blackbird.afit.af.mil>
Source record: 17533

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2760. Howdy from North Dakota!

Newsgroup: rec.radio.amateur.space
Date: 1997-11-10 00:00:00 UTC
From: Mark Fossum <n0nsv@amsat.org>
Message-ID: <3467B42A.10A@amsat.org>
Source record: 17534

Hello Everyone:

I'm planning a trip to North Dakota this weekend and I'll be lighting up my old station. My satellite antennas are still there, ready for aiming. My hope is to operate AO-10, AO-27, FO-20 & FO-29 (if it's in JA mode, I haven't checked that yet)

My grid is DN98 if you're interested. I should be there Friday, Saturday & Sunday. Hope to hear you on the birds.

Mark Fossum - N0NSV

2761. Request for Help

Hello All

I have just found and I am waiting for its arrival a Yaesu G-5400B Rotor to go along with my Yaesu FT-736R. I have a need for some assistance in finding a tracking program that is both user friendly and tracks several sats at the same time. I also would appreciate any help of the hardware needed to connect the radio with the rotor. Thanks for any help or suggestions in advance. Also if there is a good reflector for Sat related information I would appreciate that as well.

Have an excellent shape *ICOM IC-R7000* Professional grade Monitoring Reciever.
Includes Original Matching External SP3 Speaker.
Speech Synthesizer Option Built in.
Has Scan Speed Increase Mod, Extra 100 Channels Mod, Discriminator Tap & SCA Audio Mod.
Everything functions Perfectly, all knobs, buttons, display, audio, etc... is/are in perfect working order, no faded markings, letters, numbers - low mileage - never used outdoors.

Includes AC Power Cord, Phono-1/8" Cable, Manual, Original Boxes & Packaging.
Makes a super Software controlled reciever system for Monitoring/Logging/Surveillance/SETI use...

** SELL FOR $999.00 + $50.00 Shipping **

EMAIL; jg@izap.com if interested.

IC-R7000 SPECIFICATIONS
GENERAL

Frequency Coverage (U.S.A., Europe, Australia): 25.0000 MHz to 999.9999 MHz, 1025.0000~ 1999.9999 MHz Mode:
SSB (A3J) AM (A3), WFM, FM (F3) Tuning Step Increment: - 0.1, 1, 5, 10, 12.5, or 25 kHz.
Power Supply Requirement (U.S.A): 117 V AC +/-10%
Usable Temperature Range: -10C ~ +60C; +14F ~ +140F
Dimensions: 286(W) x 110(H) x 276(D) mm, 11.3(W) x 4.3(H) x 10.9(D) in
Weight: 8.0 kg; 17.6 lb.
Sensitivity: 25.0000 MHz~999.9999 MHz SSB - Less than 0.3 V for 10 dB S/N AM - Less than 1.0 V for 10 dB
S/N FM - 0.5 V for 12 dB S/N FM(Wide) - Less than 1.0 V for 12 dB S/N 1240.0000 MHz~1300.0000 MHz B -
Less than 0.3 V for 10 dB S/N AM - Less than 2.0 V for 10 dB S/N FM - 0.5 V for 12 dB S/N FM(Wide) -Less
than 2.0 V for 12 dB S/N
Selectivity: SSB - More than 2.8 kHz/-6 dB, Less than 11 kHz /-40 dB AM, FM - More than 15 kHz/-6 dB, Less than
40 kHz /-40 dB AM, FM(narrow) - More than 6 kHz/-6 dB, Less than 18 kHz /-50 dB FM(Wide): More than
150kHz/-6 dB, Less than 380 kHz /-20 dB
Audio Output Power: More than 2.5 W at 10% distortion with an 8 ohms load.
RF Connector: "N" type connector (female).

OPTIONS

EX-310 VOICE SYNTHESIZER UNIT: Provides audible, synthesized readings of frequencies in English. $ 129.00
SP-3 EXTERNAL SPEAKER: External speaker. Matching style and size with IC-R7000. $ 172.00

The freq is 145.820. There are links from my web site for sat tracking and
orbital data. Use Mir data for Sputnik. See my sig for the URL to my site.

>Call me old-fashioned, if you must. But at least spell "la merde"
>(which does not refer to the excrement of any particular species,
>BTW) properly.

No, it shows a lack of attention to the french language, which is
more out of disdain and contempt for the failed french empire
itself than any inferred lack of effort on "homework." The
misspelling of "la merde" was quite intentional, and appears to
have had the desired effect of drawing yet another spelling bee
queen into my sights for a nice load of hot, steaming, (and OK,
NON-SPECIES SPECIFIC) excrement in the face. s-p-l-a-t!!
Ad Hominem is as ad hominem does...

Take doppler into account. At the start of the pass be on .825. At mid pass
820 and near the end .815. You'll copy it longer that way.

Mel.
Someone told me the original Sputnik also transmitted at 108Mhz is that
true?
Dale

PS, I have a recording of the Sputnik JR that I made a couple days ago
and a spectrogram for showing it's core temperature on my web site
http://www.drdale.com

2770. *ANNOUNCING* New DX Reflector

Newsgroup: rec.radio.amateur.space
Date: 1997-11-11 00:00:00 UTC
From: "B.K." <k7on@qth.net>
Message-ID: <3468E835.7659@qth.net>
Source record: 17542

ANNOUNCING New DX Reflector

To better serve amateurs of the world, a *NEW* DX Reflector
has been created at QTH.NET for use by all.

Please refer to the details below and join today!!

--

>>>> info dx
DX is a mailing list (reflector) devoted to the
discussion of DX.

* Anything DX Related

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe dx

To be removed from the mailing list:

TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe dx

To post information/questions to the list:

TO: dx@qth.net

This mailing list is sponsored by Al Waller (K3TKJ).

Please address any questions to: k7on@qth.net

QTH.Net Digests and Archives (for subscribers)
k7on@qth.net

What about Digests and Archives?

A. Digests

All lists at QTH.Net have digests available.

You can subscribe to a digest and periodically receive the compiled
messages rather than individual messages.

All list digests are configured for a size limit of 40,000 bytes.
However, most of the files are around 16k to 30k. This is because
majordomo will NOT send a digest larger than the limit. If a new
message pushes beyond the limit, it sends the accumulated, putting

the new message in the NEXT digest.

If you are switching from non-digest to digest, you must unsubscribe
dx and subscribe dx-digest.

It is an entirely seperate subscription, but both digest and non-digest
subscribers are permitted to post to the non-digest list.

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe dx-digest
unsubscribe dx

B. Archives

All messages sent via reflector are archived and are available for
access through majordomo.

You can send a command to majordomo@qth.net and in the body type:

index dx-digest

and get a list of files that are available by request.

Here is an example:

>>>> index dx-digest
total 116
-rw-rw---- 1 majordom 45 14169 Sep 2 18:09 v01.n042
-rw-rw---- 1 majordom 45 18100 Sep 3 11:27 v01.n043
-rw-rw---- 1 majordom 45 15322 Sep 4 14:11 v01.n044
-rw-rw---- 1 majordom 45 13490 Sep 6 11:15 v01.n045
-rw-rw---- 1 majordom 45 16382 Sep 9 18:39 v01.n046
-rw-rw---- 1 majordom 45 14823 Sep 11 08:40 v01.n047
-rw-rw---- 1 majordom 45 16872 Sep 12 01:04 v01.n048

To retrieve one of these files, send an email to majordomo@qth.net.

In the body of the message, type:

get dx-digest v01.n048

The file will be emailed to you, automagically!

C. Archives on WWW

You may view the archives online.

Point your web browser to: http://www.qth.net/dx-digest.archive

You are 100% correct. The same spacecraft design could be used for other purposes. Amsat-DL has a plan to send a Phase 3D semi-clone to Mars in 2001. Funding would come from the German government, not from Amsat member contributions. Amsat North America has not agreed to participate in the Mars mission, but some Amsat members have expressed interest in doing so as individuals.

There are some in Amsat who would like to keep the Orlando spacecraft facility open for business after Phase 3D is launched. If Amsat could work in partnership with a university or some commercial enterprise, that would allow the lab to stay open and the satellite team to stay intact, which would make it that much easier to build the next ham radio satellite when the time comes. It is possible that Amsat-NA could assemble the German Mars mission in Orlando as a subcontractor to Amsat-DL. It might also be possible to sell space for some scientific experiment package on a future ham satellite, which would help to finance the next hamsat. There are interesting and exciting possibilities ahead if these ideas work out.

2774. Tracking Freeware.

Newsgroup: rec.radio.amateur.space
Date: 1997-11-12 00:00:00 UTC
From: Steve Olson <steven@inil.com>
Message-ID: <34696eeb.0@news.inil.com>
Source record: 17546

I'm new to this whole computer/internet/newsgroup thing, so please
pardon my ignorance.
Can anyone recommend a good freeware satellite tracking program?
I'm looking for something that will allow me to bolt up to an AZ/EL rotator
in the future.
Can anyone recommend a source for plans/schematics for a relatively simple
interface, that I might build, to allow me to bolt up my PC to a rotator?

Thanks!

2777. Essay Question

Newsgroup: rec.radio.amateur.space
Date: 1997-11-12 00:00:00 UTC
From: "Edward, III Dickinson" <eddick@worldnet.att.net>
Message-ID: <64cgp0$od4@bgtnsc03.worldnet.att.net>
Source record: 17549

The following table is contained in an article in October 1997 QST, 'Official Journal of The American Radio Relay League'. The article, "What's New About the FCC's New RF-Exposure Regulations?", by Ed Hare, W1RFI, is on pages 51 and 52.

Table 1
Power Thresholds for Routine Evaluation of Amateur Radio Stations

Band (Wavelength)	Transmitter Power (W)
160m	500
75m	500
80m	500
40m	500
30m	425
20m	225
17m	125
15m	100
12m	75
10m	50
6 - 1.23m	50
70cm	70
33cm	150
23cm	200
13cm and up	250

ESSAY QUESTION

Compare the frequencies aligned with lower power thresholds with those which may be useful to Low Earth Orbit satellites. Include in your discussion the implications of non-structured communications verses a potential preponderance 'organizationally prepared' information. Discuss the ramifications of this with the potential dampening of freedom of communication throughout the world. Additionally, discuss the idea of vertically integrated information processing entities dominating the RF Spectrum. References to other recent restrictions on the airways, may be included.

As you see fit, please post this 'essay question' where it may be viewed by Radio Amateurs and interested others.

'Only the Paranoid Survive'
- Andrew Grove

'The price of freedom is eternal vigilance.'

Cross-posted to:
alt.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.scanner,rec.radio.shortwave

Enter the world of amateur satellite communications with AMSAT - Radio Amateur Satellite Corporation. Satellites are amateur radios highest frontier and you can be a part of it. Like working DX but hate poor HF band conditions? Work DX via satellite and leave all be qrm, qrn & qsb behind. Like Digital modes? Upload a message to a pacsat and in 45 minutes a ham on the other side of the world could read it and respond to it. You can leave a message with the cosmonauts on the Mir space station or talk to the astronauts on the space shuttle during SAREX missions. You can also play a part in helping AMSAT complete it latest project, the Phase 3D satellite. Phase 3D is ham radios largest and most complex satellite to date. Construction and testing of P3D will soon be complete. Ham radio satellites mainly operate above 144 mHz, so you won't need a fancy ham radio license to use them. A tech class license will work just fine.
Of course you don't need to be a member of AMSAT to enjoy all these things, But your membership will help keep present and future projects going. If you've decided you won't join Amsat at this time, but would like to donate to Phase 3D. You can send your contribution to:

AMSAT-NA
850 Sligo Ave. Suite 600
Silver Spring, MD. 20910-4703

or call Martha at Amsat: (301) 589-6062

For more info about AMSAT and Phase 3D see: http://www.amsat.org

ARRL in order to encourage people to support AMSAT. I sure hope
this wasn't an offical AMSAT posting.

Not to worry, it's definitely not official. I just think KB7ADL seems to
like to stir up trouble, at least, that's my opinion from reading AMSAT-BB.
I wonder if perhaps he's trying to make amends. *grin* AMSAT is a worthy
organization, but it does tend to attract, shall we say discreetly, some
spirited discussion from time to time... *Sigh*

> Regards Clive

Starts on 145.825, and then due to Doppler, shifts down in freq. As I
was listening to it on a couple passes last night, I was able to check for
best recieve polarity, and horizontal was far better than vertical, using
a 3 el indoor quad. Fun to listen to it, but listening to the Cosmonauts
on 143.625 is more fun. The sig was so clear that I could hear the guy
breathing into the microphone while he was listening to a reply. All in
Russian language. Dan WA7TDZ Oregon

It doesn't need to be offical. It's just one person asking another to join an organization. You would be doing the same thing when you ask a new ham in your area to join your local radio club. Now, if you want an offical invitation to join AMSAT, I'll have one of the board of directors send you a special e-mail or if you would like, I can have Martha send you a AMSAT membership application by mail.

I think the clever play on words is confusing some folk.

"ARRL got you down", meaning that on the surface of the planet, the ARRL tends to care for ham things (at least that is their intent and purpose), and "Join AMSAT" suggests that if one wants to play a part in the organization that deals with things one sees when one looks "up", one needs to join AMSAT (perhaps in addition to the ARRL).

Cute, but probably needed a preface in the original post to help those of us who tend to be more literal (left brainers) catch up with the artistic license of the more literary (right brainers). Neither is better, just different!

I thought it was cute, but then I tend to float fairly readily between right and left brain approaches ... have to, I'm a counselor and pastor!

> about you?

Your "cute" subject line clearly suggests that AMSAT might be a substitute for ARRL if "ARRL got you down". Perhaps that was not your intent, but that is the "message" that many will draw from your unfortunate choice of words.

Given the historic support (including millions of $) that ARRL members have given to AMSAT, it seems unlikely that AMSAT would like to be viewed as a "substitute" for ARRL.

OFF-TOPIC Material, in proof:

Why Engineers Don't Write Cookbooks

Chocolate Chip Cookies:

Ingredients:

* 1.) 532.35 cm3 gluten
* 2.) 4.9 cm3 NaHCO3
* 3.) 4.9 cm3 refined halite
* 4.) 236.6 cm3 partially hydrogenated tallow triglyceride
* 5.) 177.45 cm3 crystalline C12H22O11
* 6.) 177.45 cm3 unrefined C12H22O11
* 7.) 4.9 cm3 methyl ether of protocatechuic aldehyde
* 8.) Two calcium carbonate-encapsulated avian albumen-coated
protein
* 9.) 473.2 cm3 theobroma cacao
* 10.) 236.6 cm3 de-encapsulated legume meats (sieve size #10)

To a 2-L jacketed round reactor vessel (reactor #1) with an overall heat transfer coefficient of about 100 Btu/F-ft2-hr, add ingredients one, two and three with constant agitation. In a second 2-L reactor vessel with a radial flow impeller operating at 100 rpm, add ingredients four, five, six, and seven until the mixture is homogenous. To reactor #2, add ingredient eight, followed by three equal volumes of the homogenous mixture in reactor #1.

Additionally, add ingredients nine and ten slowly, with constant agitation. Care must be taken at this point in the reaction to control any temperature rise that may be the result of an exothermic reaction.

Using a screw extrude attached to a #4 nodulizer, place the mixture piece-meal on a 316SS sheet (300 x 600 mm). Heat in a 460K oven for a period of time that is in agreement with Frank & Johnston's first order rate expression (see JACOS, 21, 55), or until golden brown. Once the reaction is complete, place the sheet on a 25C heat-transfer table, allowing the product to come to equilibrium.

: Hi everybody.

: Last week I watched on TV that the Russians had released a copy of the
: Sputnik I satellite from the MIR Space Station

: I'd like to know if it's possible, the frequency of the famous "bip bip
: bip".

145.825 Mhz, with the usual Doppler shift.

That's what Don Horton posted to the Hearsat mailing list:

-=-=-=-=

The frequency of the beacon indicates the satellite's internal temperature.
The scale runs from 1361 Hz at 50 degrees C to 541 Hz at minus 40 degrees C.
Here's the scale:

Degs (C) Freq (Hz)

50 1361
30 1290
25 1261
10 1208
0 1131
-10 1040
-20 891
-30 724
-40 541

--from ARRL Space Bulletin 34

-=-=-=-

Various amatures monitor the Sputnik Jr and report temperature of around
25C.

-J.T.

2802. Re: AO-27 On/Off Schedule

Newsgroup: rec.radio.amateur.space
Date: 1997-11-15 00:00:00 UTC
From: John Mock <kd6pag@nospam.mocha.ecofe.com>
Message-ID: <4mvhxuo8hh.fsf@spinner.ecofe.com>
Source record: 17574

I tried listening to a pass of AO-27 a few nights ago at about 9pm but I heard nothing. I heard that they may turn the sattelite off at times to extend its life but I do not know when. Could someone please clear this up for me.

AO-27 shares resources with Eyesat-1, and there is not enough power for the amateur part to operate at all times. So it is programmed to be on during daylight hours in the middle latitudes of the Northern hemisphere. So, on the passes when it's off in the U.S., then, for example, Russian operators can use it, as it's daytime for them. Addition information from collected from AMSAT news and other sources follows.

-- KD6PAG (Networking Old-Timer, RF newbie)

P.S. I'm interested in skeds: QRV in CM87, other nearby grids upon request.

Excerpts from http://qsl.net/kd6pag/AO-27.html

When can AO-27 operate?

The Satellite contains batteries and solar panels and is could run the transmitters during ANY portion of a pass. Due to power budget limits, the AO-27 Transmitter can not run all the time. If it did, the batteries would run down in a week's time. Therefore the AO-27 TX is on only for 17 Minutes a pass. This is a difference in the Amateur and Commercial sides. The Eyesat-1 commercial Transmitter could be left on all the time at different power levels.

- -

The TEPR States are defined as follows:

Tepr 1, Started when the satellite Enters the Eclipse
Tepr 2, Started at (tepr 1 time) after the satellite enters the eclipse
Tepr 3, Started at (tepr 1 time) + (tepr 2 time) ...

Tepr 4, Started when the satellite enters the Sun
Tepr 5, Started at (tepr 4 time) after the satellite enters the Sun
Tepr 6, Started at (tepr 4) + (tepr 5) ...

TEPR states 1,2 and 3 happen during the Nighttime passes and TEPR states 4,5 and 6 happen during the Daytime passes. These occur during EVERY pass, not just over the U.S.A.

The times assigned to the TEPR states are chosen for the health of the satellite over operation convenience. Therefore, during parts of the year the satellite will turn on late or turn off early as seen by ground

stations.

Users are asked not to transmit on 145.85 MHz if they do not hear the
satellite's downlink so as to avoid possible interference to other
satellite uplinks and downlinks on adjacent frequencies.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update.]

- -

As of 9/21/97 the TEPR State are set to:

Tepr 4 - 12.5 Minutes
Tepr 5 - 18.0 Minutes

Current Infomation about AO-27 can be found at: http://www.umbra.com

- Michael

Online sound recordings from Sputnik and other early satellites
may be found at:
http://www.amsat.org/amsat/features/sounds/firstsat.html

Sputnik 1 transmitted at 20.005 and 40.002 MHz.

The replica 'launched' from MIR on Nov. 3, 1997 transmits at 145.82
MHz.

Hm... never heard of that rule...

> I have been on the digital satellites for a long time now.
> I have always corrected both rx. and tx. for doppler shift.

The general rule is IMHO that you tune the TX freq. However, there some
exceptions:

1. On Mode K, you won't tune the TX freq since you don't want to bump
into a non-satellite QSO.

2. On the Fuji Birds, you'll stay on your uplink freq and only
compensate the downlink. If you change the uplink, maybe your QSO
partner won't find your TX sigs because of the high doppler shift - and
maybe the doppler is running to the opposite direction for him...

Practice shows that both doppler shift corrections are in use (which
doesn't make it easier...)

> My latest gear is computer driven and also corrects for both Tx. and
> Rx.

If you have such a TRX, there is a program for use with the analog birds
made by AMSAT-BDA (Bermudas) - "The Station Program". To be found on
their web page
http://www.amsat.bm/

2808. Re: tuning for doppler corrrection

Newsgroup: rec.radio.amateur.space
Date: 1997-11-15 00:00:00 UTC
From: John Mock <kd6pag@nospam.mocha.ecofe.com>
Message-ID: <4m7maaszov.fsf@spinner.ecofe.com>
Source record: 17580

The general rule is IMHO that you tune the TX freq. However, there some exceptions: [Oliver Welp <welp@muenster.de>]

Here's two more:

1. AO-27 has a wide and very sensitive receiver, so no doppler correction is needed on TX, only RX.

2. On MIR/SAFEX repeater, you must correct for doppler on both TX and RX. Usually this involves using multiple memory channels to store the odd splits. (See http://qsl.net.kd6pag/MIR.html)

Hope to hear some of you out there.

Enter the world of amateur satellite communications with AMSAT - Radio Amateur Satellite Corporation. Satellites are amateur radios highest frontier and you can be a part of it. Like working DX but hate poor HF band conditions? Work DX via satellite and leave all be qrm, qrn & qsb behind. Like Digital modes? Upload a message to a pacsat and in 45 minutes a ham on the other side of the world could read it and respond to it. You can leave a message with the cosmonauts on the Mir space station or talk to the astronauts on the space shuttle during SAREX missions. You can also play a part in helping AMSAT complete it latest project, the Phase 3D satellite. Phase 3D is ham radios largest and most complex satellite to date. Construction and testing of P3D will soon be complete. Ham radio satellites mainly operate above 144 mHz, so you won't need a fancy ham radio license to use them. A tech class license will work just fine.
Of course you don't need to be a member of AMSAT to enjoy all these things, But your membership will help keep present and future projects going.If you've decided you won't join Amsat at this time, but would like to donate to Phase 3D. You can send your contribution to:

AMSAT-NA
850 Sligo Ave. Suite 600
Silver Spring, MD. 20910-4703

or call Martha at Amsat: (301) 589-6062

For more info about AMSAT
and Phase 3D see: http://www.amsat.org

Source record: 17635

I listened to the Sputnik replica again ths morning (from near WASH DC). Very strong on my Drake 2-B (with converter) using a vertical half wave dipole. I was also able to hear it through the static on my Radio shck 2 meter FM hand held with rubber duck antenna.

This is really a fascinating and admirable project. I checked out the Web page and learned that the transmitter was built by a bunch of school kids on Reunion Island (get out your globes - its in the Indian Ocean.) Kids in Russia built the spacecraft.

I'm still trying to find out the significance of the number of beeps. I know that the tone of the beeps indicates core temperature, but what about the number of beeps. There was no info on this on the Web page.

Three cheers for the kids on Reunion Island and for their colleagues in Russia!

I am also a member of the ARRL, although I do not like their viewpoints
lately, and WELCOME a message such as the one posted giving me an
alternative group to join that may have issues more in the direction of
myself. I don't think wording it any other way would have got the point
accross that I indeed understood.

2817. sputnik 2 report

Newsgroup: rec.radio.amateur.space
Date: 1997-11-17 00:00:00 UTC
From: Bill <whagen@inreach.com>
Message-ID: <3470AE1A.7990@inreach.com>
Source record: 17639

hi all,
I aquired sputnik 2 late sunday night, actually early monday morning 11/17/97 at 12:30 am pst the beep-beep was heard on 145.82 until 12:34 am pst. I was listening with an Icom IC 25a 2-meter transciever, had a 1/4 wave vertical antenna about 20 feet off the roof of a 1-story house in Chico, California.
The beep pattern was a little less than 1 second apart, with 7 beeps in row, the eight beep faded out, followed by another 7 beeps. I heard this for approx 4 minutes, then lost the signal. I think the pass was from south to north and somewhat east of my location.
I use the Where Is the Mir? website from NASA to track the "thing"
http://liftoff.msfc.nasa.gov/temp/Mir_loc.html

enjoy all.
I will try to record it tonight.

2818. NORAD Two-Line Orbital Element Sets (TLE097)

Newsgroup: rec.radio.amateur.space
Date: 1997-11-18 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <64qro5$7eh$1@blackbird.afit.af.mil>
Source record: 17640

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

2819. Meaning of Sputnik beeps

Newsgroup: rec.radio.amateur.space
Date: 1997-11-18 00:00:00 UTC
From: wmeara@erols.com
Message-ID: <3471c7cf.809814@news.erols.com>
Source record: 17641

I got an e-mail yesterday from FR5CY on Reunion Island. I believe he is the teacher for the group of schoolkids who built the transmitter in the Sputnik replica.

I asked him about the meaning of the number of beeps being transmitted by the satellite. He told me that - as with the original Sputnik - the number of beeps has no signiificance. However, as has been indicated here earlier, the modulation (tone) on the beeps does correspond to satellite temperature.

73 de Bill N2CQR

It's the exac maening, but sputnik 40, don't give us any information on the
temperature.

John Charles <jaycee@midmarsh.demon.co.uk> writes:

-In article <01bcf2a5$41a52980$777ba3ce@glabelle>, George & Jeanine
-LaBelle <glabelle@teleport.com> writes
->Are the RS sats operational? I've been unable to hear them recently.
->
->FO-20 seems to work fine, but FO-29 seems gone too. Is there an
->informational website for the FO's?
-
-FO-29 was certainly working over Europe today (17 Nov) and I could hear
-my downlink OK. Not as strong as FO-20 though.
-
-I seem to remember reading that if power resources get low then the
-Amateur section is shut down so the commercial section can keep working.
-
-73 John M1BTR

-John Charles jaycee@midmarsh.demon.co.uk

I don't know about the FO sats but RS-12 is alive and well.
I had four great chats on its pass last evening here in
south Texas. I was actually able to hit it with my
HT and a 3 element yagi and talk to a guy accross town! Kind
of the long way around but it was fun. This was at about
11/18/97 00:55 UTC last night. I've never had any real luck
with RS-15. My receiver isn't sensitive enough but that little
article in QST with the MMIC chip has promise. I do know that
when the RS birds are out of the sunlight the ham portion
shuts down for the night. You should have a good pass tonight
at around 23:30 UTC for RS-12.

* Spectral display scope
* 100 memories
* Receive 50-904.995 MHz
* Receiving modes, AM, NFM and WFM
* High precision PLL synthesizer
* Microprocessor controlled
* Operates on 13.8 VDC
* 120 volt 60 Hz wall transformer included
* Ideal for the service bench
* Equipped with LCD display
* Supplied with a telescoping antenna
* Audio output 1.8 Watts
* LCD window display 1 MHz, 250 kHz and 100 kHz
* Extremely well built to industry standards
* Dimensions: 2.95" (H) x 7.09" (W) x 7.09" (D)
* Weight 4.63 lbs

this is one years old unit with little usage
if you are interestd in this unit feel free to send me e-mail
for more information
http://www.stdradio.com/rcvr.html
http://www.martin-lynch.co.uk/ax700.htm

Standard CCR708A 50-905MHz Scanner / Spectrum Disp $799<----(above is
what I found from some site
they sale this used unit still $799, But I won't asking for this much,
"$550" including SHIPing UPS and INSURED)

2825. For Trade? 1st Shuttle memoribila

Newsgroup: rec.radio.amateur.space
Date: 1997-11-18 00:00:00 UTC
From: sdoyle@mail1.sas.upenn.edu
Message-ID: <64t3m7$r8g$3@netnews.upenn.edu>
Source record: 17647

I have a bunch of newspaper & magazine clippings & articles from the first space shuttle launch. Also several 8x10 B&Ws and color slides from NASA. There may also be some original color 8x10s of the launch, I'll have to check. I might even be able to dig up some folders and stickers. (I was a news photographer on the base during the 1st launch. Such wonderful memories!)

Anyway, I don't want to keep them anymore, I need to clean out my life and living space. I don't know anyone who would want these, so I'm asking around.

I thought perhaps someone might like to either trade me for something, or just give me some cash outright. I don't know what this would be worth to a collector, but I'm not trying to get rich on it. I just want to give it to someone who will appreciate it before I just go and trash it all.

Something that I'd like to trade for would be postage stamps, either from around the world or some older US stamps, mint or used. I am trying to introduce some girls to the hobby and need a good supply of stamps for them.

If anyone is interested, I am willing to pay the shipping of this stuff. Please e me or call. I live in Phila, PA. Thanks.

Sputnik 40 was heard loud and clear in Rutherfordton, NC 11-18-97, 04:28 UTC time and date. I have been monitoring it for the past 3 days and every contact is about a RST 549 when at it's nearest point to my location. Guess the MIR's packet message system is still off-line due to time to check and empty all the mail before they put it back on line.
Good to hear the Dove Oscar back on line... I know it's been back on for a while now, just wanted to say Cheers to the hard work to get it back on. It gives me like 10 over when it is directly overhead!... not bad on 2 meters for 800 miles... heh. RST 599

Anyone needing a good site for Mir information check out:
http://members.aol.com/k5wx/index.html

I use Logsat for tracking and a Yaesu FT-290RII 2 meter all mode with a Ringo Ranger and RG 8 mini coax.

Another piece of junk for the foolhardy to waste their time and money
on.

I have a flower arrangement in the living room, that when the light and
viewing angle are just right, the face of King Neptune is unmistakable.

So, what am I to conclude from this. The guy is a peeper?

2829. Seminar on the possibility of an ancient civilization on Mars

Newsgroup: rec.radio.amateur.space
Date: 1997-11-19 00:00:00 UTC

The MARTIAN ENIGMAS -- Presented by Dr. Mark J. Carlotto

WHEN: Thursday, November 20, 1997
4:00 PM - 6:00 PM
WHERE: Meyerson Hall B1
University of Pennsylvania
Philadelphia, PA 19104

Abstract- Opinions about the possibility of life on Mars have changed over the years
- from Percival Lowell's canals, to the dead planet imaged by the early Mariner missions to Mars, to the enormous volcanoes, great canyon systems, and channels carved by water seen by Mariner 9 and Viking. Among Viking's lesser-known discoveries was the "Face on Mars" - a mile-long formation resembling a humanoid head staring straight up into space.

Although NASA has not apparently taken the time to study the Face in any depth, it has been the focus of serious investigation outside of the planetary science community for almost twenty years. Scientists and engineers from a variety of fields have examined the Viking imagery and conclude that certain objects including the Face may be artificial in origin and deserve further study.

With NASA's recent announcement concerning the possible discovery of fossilized micro-organisms, opinions about life on Mars are changing once again. If microbes are now considered within the realm of possibility, why not intelligent life? Could the Face and other nearby objects have been built by an ancient technological civilization that vanished long ago, seemingly without a trace?

Our latest probe, the Mars Global Surveyor, which is now in orbit around the Red Planet contains a camera with a resolution almost 50 times better Viking's. A camera that can shed new light on these mysteries.

This presentation looks at both sides of the question, and presents compelling evidence in support of the claim that these objects may be precisely what many scientists have sought for decades: the first hard evidence that we are not alone.

Brief Biography

Mark Carlotto was born in New Haven, Connecticut in 1954. He attended Carnegie-Mellon University, receiving his Ph. D. degree in Electrical Engineering in 1981. Dr. Carlotto has over twenty years of experience in digital image processing and satellite remote sensing and has held a variety of positions in academia and industry. He has published over sixty technical and scientific papers in his field of expertise. His book, "The

Martian Enigmas," describes in detail his analysis of imagery of the Face and other unusual objects on the surface of Mars imaged by a Viking Orbiter spacecraft in 1976.

2830. WTB 70 CTM Pre-amp and @ meter Amp

Newsgroup: rec.radio.amateur.space

Hi everyone

I'am new to Satilite and need a 453MHZ pre-amp and
2 meter amp about 35 watts in and 150 or so watts out.
I talk to some people from AMSAT an they told me this is what I needed. If
not please let me know, I hate to spend money on things
I dodnt need and that would clause problems.

Thanks Carl Walthall

2833. Sat Tracking Keps Alorithm?

Newsgroup: rec.radio.amateur.space
Date: 1997-11-20 00:00:00 UTC
From: DJROUND@globalnet.co.uk
Message-ID: <6517cm$o7j$1@heliodor.xara.net>
Source record: 17655

Ive got to write some C++ source code to control a real time geostationary and low Earth orbit sat tracking system for marine vehicles.
Does anyone know where I can get a copy of some working C++ source code to calculate simple AZ / EL parameters using the standard TLE keps. Or even, some information on how to calculate the position of an orbitting sat?
And what the hell-since Im asking..... Does anyone know a formular for taking current pitch / roll / az parameters from a ship in a rough sea and converting them to AZ / EL for effectively stablising the platform and controlling the dish?

As you can see Im going to be a bit busy over the next few months. When its all down you can all be asured Ill be posting it into the group with code for everyone to play with.. (not much use unless you have a boat with a dish and need to track sats really :-))

Thanks for reading...
Darren

2835. December Massachusetts 2 meter balloon launch

Newsgroup: rec.radio.amateur.space
Date: 1997-11-20 00:00:00 UTC
From: au156@yfn.ysu.edu
Message-ID: <651p31$65u$1@news.ysu.edu>
Source record: 17657

This is a request for volunteers to serve as official tracking
stations.

A general notice will be posted here soon that will describe
the use of the more common FM equipment to listen to the beacon,
as well as a refined beacon frequency.

DECEMBER MASSACHUSETTS BALLOON LAUNCH
2 Meter Tracking Stations sought to follow beacon

A 2 meter CW beacon transmitter will be launched by balloon from
Plymouth, Massachusetts on Tuesday, December 2, at about 3:00 PM as
part of a middle school earth science project; the launch date is
subject to change in case of adverse weather conditions.

I'm looking for volunteer radio trackers to assist in tracking the
2 meter signal from fixed or mobile locations. The aim will not be
recovery (the electronics are expendable), but determination of
approximate balloon position by antenna headings.

Of course I welcome participation at any level, even if you simply
report that you heard the signals, but ideally I'm seeking a few
well-equipped fixed stations to serve as primary tracking sites in
widely spaced locations in eastern Massachusetts. Especially
desirable are stations located far out on Cape Cod (Provincetown
to Chatham) and also coastal locations north of Boston (Gloucester
and vicinity), but anything in the eastern section of the state will
be fine.

Remember that this beacon may well be received for *100 miles*
or more away from its position if it continues to transmit at
high altitude, so the area of coverage may far exceed the optimum
tracking region.

You should have some kind of rotatable yagi (vertical polarization
strongly preferred) and a radio equipped to receive 2 meter CW
(all mode VHF or receiving converter plus HF sideband). AMSAT
stations fit this description perfectly, so please let any satellite
ham friends know of this opportunity.

If this interests you, please email me a short description of your
station equipment and location. Although I may not be able to respond
directly to all your email, you may ask to be put on a special email
list that will issue further notices on this event.

There will also be up-to-the-minute information (including complete technical information as it becomes available) for this event on the High Altitude Balloon Launch Information Center (HABLIC) website.

Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

2840. Two Line Elements and Outlook Express!!

Newsgroup: rec.radio.amateur.space
Date: 1997-11-21 00:00:00 UTC
From: nobody@REPLAY.COM
Message-ID: <199711211435.PAA19058@basement.replay.com>
Source record: 17662

Hello!

Is anyone having any luck getting tles sent from David Ransom, David Cottle, or Ken Ernandes to work properly in STSPLUS, if those tles were received with Microsoft Outlook Express?

It seems that the mailer somehow changes the critical spacing of the tles, which renders them useless. It is a known fact that Outlook Express removes a blank line from messages sent using PGP and that line is necessary to decode the message.

The "preview" version of Express showed the tles as an "attachment" and they worked fine, now that they appear in the body of the message they are corrupt!

I cannot believe that I am the only person in the world using Outlook Express and STSORBIT PLUS! And yet I have not seen any other messages regarding this behavior by the program.

The Outlook Express newsgroup is no help at all since none of them have a clue what a two line element is, and they are not concerned anyway because they do not do satellite tracking!

The "work around" I have found is this:

1/ In OE highlight the name of the message which has the tle info.
2/ Under FILE, choose PROPERTIES
3/ Choose DETAILS from the pop up window
4/ then choose MESSAGE SOURCE
5/ Find the two line information.
6/ Highlight the information and COPY it into Notepad then into
STSPLUS and it will work fine.

This shows that somewhere in the translation from the MESSAGE SOURCE to the actual display of the message the format is somehow changed and the data is corrupted.

All my other mailers receive the tles just fine, it is not the source but Outlook Express!

Please post any comments to the group.

2841. NORAD Two-Line Orbital Element Set: Space Shuttle (97325.25000000)

Newsgroup: rec.radio.amateur.space
Date: 1997-11-21 00:00:00 UTC

SHUTTLE AMATEUR RADIO EXPERIMENT (SAREX)
BULLETIN: Summer 1997

This information is provided by:
THE AMERICAN RADIO RELAY LEAGUE (ARRL)
Educational Activities Department (EAD)
225 Main Street Newington CT 06111-1494 USA
Telephone: (860) 594-0301 FAX: (860) 594-0259
Internet: sarex@arrl.org ARRL BBS: (860) 594-0306
World Wide Web: http://www.arrl.org/

FREQUENTLY ASKED QUESTIONS

WHAT IS SAREX?
With the help of Amateur Radio clubs and ham radio operators, US
astronauts
can speak over the ham airwaves while in orbit. They talk directly with
students, showing teachers, students, parents and communities how
Amateur
Radio energizes youngsters about science, technology, and learning.
The
program is called SAREX, the Shuttle Amateur Radio EXperiment.

NASA's intent in having astronauts take part in SAREX is to involve the
largest possible numbers of people, particularly youths, in technology
and
the US space program with the help of Amateur Radio.

During a SAREX mission, the astronauts make scheduled and unscheduled
Amateur Radio contacts with schools, random contacts with Amateur Radio
operators and contact with the astronauts' families.

A few schools are selected from around the world for scheduled contacts with
the shuttle during SAREX missions. These contacts give the schools a 95-
percent chance at a successful contact. Six or more students at each school
ask the astronauts questions, and the nature of these contacts embodies the
primary goal of SAREX--to excite student interest in learning.

WHO SPONSORS SAREX?
The American Radio Relay League (ARRL), the Radio Amateur Satellite
Corporation (AMSAT) and NASA sponsor these exciting experiments.
AMSAT volunteers support technical operations, and mentor school
groups.
ARRL provides SAREX information. ARRL and NASA HQ create and
distribute SAREX lesson plans and resources for teachers. SAREX is
supported by the Federal Communications Commission.

Hundreds of Amateur Radio operators, including those from NASA Amateur
Radio clubs at Johnson Space Center, Goddard Space Flight Center, and
Marshall Space Flight Center, work behind the scenes.

HOW CAN I -- A TEACHER -- GET STARTED IN SAREX?
Schools wanting a scheduled SAREX contact with the astronauts are
required
to submit a proposal and a SAREX school application to ARRL.

While only a few schools get scheduled contacts per mission, all schools
can
participate by eavesdropping, or by trying to make a random contact with
the
astronauts. SAREX lesson plans are available from ARRL for all schools
who
participate. Imagine listening in on the astronauts from your classroom!
If you
are a school teacher, but are unfamiliar with ham radio, you can still
take part
in SAREX. Contact ARRL EAD to get a list of your local Amateur Radio
clubs
to assist you.

If you are a parent, grandparent and/or a ham radio operator, contact
ARRL
EAD and a local school. EAD will send materials, including ways to
convince
teachers and school administrators that Amateur Radio is an important
discipline the school should take advantage of on a full-time basis.
This is a
tremendous opportunity for you to showcase SAREX and Amateur Radio to
students of all ages.

Note: Future Shuttle missions will mainly be dedicated to bringing parts
of the

International Space Station into space. Therefore, we anticipate that there will
most likely be one SAREX mission in 1998, and one in 1999. Details on any
possible SAREX missions in those years will be posted on the ARRLWeb as soon as they become available.

HOW DO I APPLY FOR A SCHOOL RADIO CONTACT?
If your school is interested in SAREX, you must complete a SAREX school application and write an educational proposal. ARRL collects these for the
SAREX Working Group who makes the final selection with the astronauts. All
grade levels and type of schools (rural, suburban and particularly urban) are
encouraged to apply.

Note: This program also encompasses "MirEX," which involves the Russian Space Station, Mir. (The word "Mir" means "peace" in Russian.) Those submitting SAREX applications can choose a preference at the top of the SAREX application form: simply check the "SAREX" or "MirEX" box. If you want to apply for an opportunity for a contact with either spacecraft,
then check the "no preference" box at the top of the SAREX school application.

For a SAREX school application send a business-sized self-addressed stamped
envelope to ARRL, or email your request for an electronic version to: sarex@arrl.org

A proposal must accompany all completed applications.
The SAREX Working Group and NASA want to know-
1) How will you:
a) integrate this activity into the school curriculum and
b) involve as many grade levels as you can, participating through essay contests, poster drawing,
letter writing, etc.?
2) Do you have an experienced group of hams to assist in setting up all necessary Amateur Radio
equipment and antennas
3) How will you get as much media coverage as possible?

HOW WILL I KNOW IF MY SCHOOL IS SELECTED FOR A CONTACT?
Schools that have been selected for SAREX scheduled contacts are called by a
SAREX coordinator. NASA requires selections to be made about six months prior to launch. If a school is not chosen, its application is recycled for future
missions. Note: Schools typically wait one year or longer.

I AM A HAM. HOW CAN I INTRODUCE SAREX TO MY CHILD?
Bring a shortwave receiver to school and let students eavesdrop on Amateur
Radio retransmissions of NASA shuttle-to-Mission-Control audio. Then set
up a 2-meter satellite ground station in class, and try a random SAREX contact.
(Or, a Mir contact.) The teacher can apply for a future school contact, almost
guaranteeing that students will have an opportunity to communicate with the
crew during a SAREX mission.

ARE THERE VIDEOS ON SAREX?
You and your class will enjoy watching students talk to astronauts via ham
radio. ARRL has a video all about space, of over 1.5 hours of programming,
at the cost of (your and our) duplication, shipping (in the US) and handling for
$12.00. Call Jean, WB3IOS, at 860-594-0219, 9:00 AM to 4:30 PM (Eastern),
using a credit card. Or send a check to ARRL EAD, 225 Main St, Newington
CT 06111. Volume 2 Shuttle Amateur Radio EXperiment includes--
-- "Ham Radio In Space:" An overview of Amateur Radio in space--from satellites to the space shuttles, and beyond. (30 min)
-- "SAREX Space Shuttle Mission STS-51F:" Astronaut Tony England, W0ORE, recounts SAREX aboard Space Shuttle Challenger, as the 2nd astronaut in history to operate ham radio in space. (18 min)
-- "SAREX Space Shuttle Mission STS-58:" Highlights of the volunteer and
student prep, and actual SAREX contact made by Cheatham County Schools, TN. (45 min)

CAN HAMS MAKE AN UNSCHEDULED SAREX CONTACT?
Yes. The astronauts have not lost sight of why SAREX has been so successful.
It is the Amateur Radio community that has brought astronaut's voices into
schools. During SAREX missions, crew members make random contacts with
earth-bound hams. They make contacts during their breaks, pre-sleep time and
before and after meal-time. Astronauts have contacted thousands of hams
around the world. On many missions, they have taken a 2-meter packet radio
station. Computer software allows the crew to operate the packet gear in
unattended mode, and hams can make contacts when the astronauts are working.

WHAT TYPE RADIO DO I NEED?
A typical SAREX ground station includes a 2-meter FM transceiver and 25-100
watts of output power. A circularly polarized crossed-Yagi antenna capable of
being pointed in both azimuth (N-S-E-W) and elevation (degrees above the
horizon) is desirable. But successful contacts have even been made with
verticals and groundplane antennas. Commercial and public domain software
is available to help track when the shuttle will be in range of your station, and
where to point your antenna. For more details on assembling your
satellite/SAREX station, get the "Satellite Experimenter's Handbook" from
ARRL (see last section of this document).

HOW DO I TALK TO ASTRONAUTS?
You may communicate with the astronauts using voice, packet (computer) radio
or television. It all depends on what equipment the astronauts take into space.
Astronauts aboard the Space Shuttle Columbia in 1996 made hundreds of
random voice contacts with ham radio operators. When the astronauts were
busy with other activities, a computer ham station aboard the orbiting shuttle
automatically made contact with thousands more hams. On other missions,
Amateur Radio Slow Scan Television (SSTV) and Fast Scan Television (FSTV)
were onboard allowing hams a glimpse at life in space.

WHAT ARE SAREX RADIO FREQUENCIES?
The following VHF frequencies are used for some SAREX missions. These
frequencies were chosen after much deliberation, to minimize problems
between SAREX and other 2-meter users. If you have comments, please direct
them to AMSAT via Frank Bauer, KA3HDO, at his address in the Radio
Amateur Callbook or email ka3hdo@amsat.org or ARRL EAD. We appreciate
the cooperation of all amateurs in making SAREX successful.

VHF Frequencies used for SAREX:

FM Voice Downlink: (Worldwide) 145.55 MHz
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz
FM Packet Uplink: 144.49 MHz

IMPORTANT: During shuttle missions to the Russian Mir Space Station, a
different set of frequencies are used for SAREX. This is done so that

SAREX
will not interfere with the Amateur Radio station aboard Mir, which uses
145.55 MHz for most of its activities. The SAREX Working Group has decided
to use the following frequencies during shuttle/Mir docking missions:

VHF Frequencies use for SAREX during Shuttle/Mir Docking Missions:

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

Most SAREX operations are split-frequency (everyone uses separate receive
and transmit frequencies).
Note: Please do not transmit on the shuttle's Downlink frequency. The downlink is your receiving frequency. The uplink is your transmitting frequency. Earth stations should listen to the downlink frequency and transmit
on the uplink frequency only when the shuttle is in range and the astronauts
are on the air.

ARE ALL OF THE CONTACTS MADE BY THE ASTRONAUTS
RANDOM?
During SAREX missions, astronauts' work schedules dictate when they can operate the radios. So most of the general contacts they make are random.

WHAT ARE MY CHANCES OF MAKING A RANDOM CONTACT?
The SAREX Working Group recognizes the long-standing commitment of the ham radio community in supporting SAREX, and asks the crew to do as many
general ham contacts as possible during flights.

CAN I USE MY SHORTWAVE RADIO TO EAVESDROP ON THE CREW?
When a shuttle mission carries the SAREX payload, members of Goddard Amateur Radio Club (MD) re-transmit live, shuttle air-to-ground audio over
Amateur Radio frequencies from their club station, call sign
WA3NAN. This station, and some VHF and UHF repeater groups, provide this
service so amateurs and students can hear the educational communications.
You will hear the astronauts and Mission Control, and bulletins about SAREX
activities. WA3NAN operates on the high frequency (HF) bands at 3.86, 7.185,
14.295, 21.395, and 28.65 MHz and--in the Greenbelt, MD area--on VHF at 147.45 MHz (FM).

CAN I RE-TRANSMIT COMMUNICA-TIONS ON THE HAM
FREQUENCIES
FCC rules, Part 97.113 (e) , state that hams are permitted to retransmit
shuttle
air-to-ground communications, provided that approval has been obtained
from
NASA. In 1990, ARRL sought NASA's permission, on behalf of radio
amateurs, to retransmit communications. NASA Public Affairs Office
encouraged such retransmissions, indicating that the communications are
public domain.

Please follow these guidelines if you plan to rebroadcast NASA shuttle
communications,
1) In keeping with good amateur practice and FCC rules, shuttle
retransmissions should be limited to educational missions, such as
those
carrying the SAREX payload.
2) Retransmissions should be done manually (with a control operator
present).
3) NASA audio contains crew "wake-up music." Amateurs should avoid, if
at
all possible, retransmitting music or other prohibited transmissions
listed by the
FCC rules (Part 97.113).

HOW CAN I TRACK THE SHUTTLE WITH A COMPUTER?
Software is available for tracking the shuttle on a personal computer.
Here are some options (ARRL in no way warrants these products or
services):

AMSAT TRACKING PROGRAMS:
The Radio Amateur Satellite Corporation (AMSAT-NA) has computer
programs for IBM, Macintosh, Apple, Commodore, and other computers.
Contact AMSAT-NA at 850 Sligo Avenue, Suite 600, Silver Spring MD
20910, Phone (301) 589-6062, FAX (301) 608-3410,
email martha@amsat.org
AMSAT also has a collection of free software for download:
World Wide Web: http://www.amsat.org
Anonymous FTP: ftp.amsat.org

STSPLUS (Shareware for IBM):
This software, designed by David Ransom Jr., has excellent graphics and
maps
to help create a mock Mission Control Center. STSPLUS and other
tracking
software is posted on Spacelink, NASA's electronic information
system;
Spacelink:
Modem: (205) 895-0028 Terminal emulation VT-100, Data format 8-N-1
World Wide Web: http://spacelink.msfc.nasa.gov
Satellite tracking software may be found in the following Spacelink
directory:

Instructional.Materials/Software

OrbiTrack (MacIntosh):
BEK Developers, PO Box 47114,
St. Petersburg, FL 33743-7114
e-mail (Bill Bard): 75366.2557@compuserve.com

SatTrack (MacIntosh):
Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306
FTP sumex.stanford.edu
SatTrack can be found in the following directory:
/info-mac/application

World Wide Web sites offer ways to predict shuttle and satellite passes via the
Internet. Check the following WWW sites:
Lou Williams, KE4ARM: http://www.acs.ncsu.edu/HamRadio/
Terry Jones, NZ8C: http://www.datasync.com/~nz8c

WHAT ARE "KEPS?"
Shuttle-tracking software uses "Keps," or Klerian elements (also known as
"orbital" or "tracking" elements) to pinpoint the location of a shuttle. Keps
provide the software with a shuttle's orbital track, which the computer uses to
calculate its location. Using a tracking program tells an observer when a
satellite will appear above his or her horizon.

WHERE CAN I FIND KEPS?
During shuttle missions carrying SAREX, Keplerian elements are available
from:

AMSAT News Service publishes weekly nformation bulletins iincluding Keps
for the shuttle and satellites. These bulletins are distributed electronically
through amateur packet radio networks, landline networks and the World
Wide Web: http://www.amsat.org

AMSAT also has email mailing lists to deliver Keps. To subscribe, send a
message with your request to listserv@amsat.org
Include your call sign (if any), your email address, and the names
(shown below) of the mailing lists you wish to receive:
SAREX - mailing list
ANS - AMSAT News Service
AMSAT-BB - AMSAT Bulletin Board
KEPS - Keplerian Elements mailing list

Goddard Amateur Radio Club, WA3NAN, maintains a BBS which carries
Keps updated daily, SAREX bulletins and shuttle mission information.
Modem lines: 301-805-3251 and 301-805-3154
Internet: wa3nan.gsfc.nasa.gov
TCP/IP address: 128.183.105.17
Packet radio: WA3NAN, on 145.090 MHz, in the Maryland/DC area.

NASA Spacelink, NASA's electronic information system, carries current
shuttle mission status reports and Keps. (See address in section titled
"How Can I Track the Shuttle with a Computer?") Keps are in this
Spacelink directory:
Spacelink.Hot.Topics/Current.Shuttle.Mission/Keplerian.Elements

Johnson Space Center Amateur Radio Club maintains a service with the
latest
element sets available during a shuttle flight. Modem line:
281-244-5625
World Wide Web: http://www.phoenix.net/~mbordel/index.html

The NASA/GSFC ORBITAL DATA BULLETIN BOARD offers Keps at:
http://oigsysop.atsc.allied.com/index.htm

Each month, ARRL publishes an Orbital Calendar, which includes equator
crossings for amateur satellites and the Mir Space Station. This data is
helpful
for people who manually (without a computer) track satellites. To
receive a
copy, send a 4x9-inch self-addressed envelope with 2 units of
first-class postage
each month to: ARRL Technical Department (ORBITS), 225 Main Street,
Newington CT 06111-1494

NASA EDUCATIONAL RESOURCES
How do you find information on shuttle schedules, payloads, space
science and
mission lesson plans? NASA has materials and resources for educators:

Specific mission and payload information can be obtained directly from
NASA,
via the shuttle mission Home Page: World Wide Web
http://shuttle.nasa.gov

Teacher Resource Centers (TRC) have free-loan publications, slides,
audio
cassettes, videocassettes, computer programs and lesson plans. For
information, contact the NASA TRC that serves your region of North
America:

NASA Spacelink, a computer information service, contains lesson plans, classroom activities, astronaut data, entire publications and details about
current and historical programs. It is primarily for teachers, but anyone
with a personal computer, modem or Internet access can use it.
(See address in section titled "Can I Track the Shuttle with a Computer?").
For more information, contact: Spacelink Administrator, Mail Code CL01, Marshall Space Flight Center, AL 35812-0001.
For help with technical problems call the Spacelink Hot Line: 205-961-1225.

NASA Television offers a front-row seat at launches and during a mission's
space activities, the latest in space science, plus educational and historical
programs. They sometimes air live coverage of SAREX. NASA-TV is received by satellite dish, or may be on your local cable tv network.

Tuning-In NASA TV:
Effective March 15, 1997 NTV is available on GE-2, Transponder 9C at 85
degrees West longitude, vertical polarization, with a frequency of 3880 MHz,
and audio of 6.8 MHz.

For details, contact: Technology and Evaluation Branch, Education Division,
Code FET, NASA HQ, Washington D.C. 20546; Phone: 202-358-1540.

HOW DO I GET A SAREX QSL?
QSL cards are similar to postcards. Hams exchange QSLs to confirm their radio contacts with other stations. Participating in SAREX is an exhilarating
experience. But waiting for that coveted QSL card requires patience. Designing
a card for the ultimate DXpedition is a lengthy process.

After a SAREX mission, ARRL and the SAREX Working Group work with crew members to select photos from that mission, and design and layout the
QSL card. This may take a few months because of the astronauts' busy schedules. Once the card are printed, ARRL forwards them to the Amateur Radio club managing the QSLs.

Send your QSL cards or reports to ARRL. Include on your QSL or report: shuttle flight number (STS-xx), date, time in UTC, frequency and mode (voice, packet or sstv). If you wish to receive a card, you must include a large,
self-addressed, stamped envelope with proper postage or sufficient IRCs included.

These clubs have graciously volunteered to handle QSLs for the following
missions:

STS-74: Greater Norwalk Amateur Radio Club, Connecticut
STS-76: Nashoba Valley Amateur Radio Club, Massachusetts
STS-78: "The Net", Washington
STS-79: Bergen Amateur Radio Association, New Jersey

SAREX PATCHES
SAREX patches are available from AMSAT. These embroidered patches depict
the cooperative effort between NASA, AMSAT and ARRL. They are available for a $6 (US) donation, $8 elsewhere. Donations support SAREX activities
provided by AMSAT. Mail your order to: AMSAT-NA, 850 Sligo Avenue, Suite 600, Silver Spring, MD 20910-4703;
Phone: 301-589-6062; Fax: 301-608-3410; e-mail: martha@amsat.org

ARRL's SAREX RESOURCE LIST:
EDUCATIONAL SUPPORT & INFORMATION is available from the American Radio Relay League 's (ARRL) Educational Activities Department (EAD), 225 Main St, Newington CT 06111 USA
Phone 860-594-0301, Fax 860-594-0259; CompuServe ID: 70007,3373;
America Online: HQARRL1;
Internet: sarex@arrl.org; World Wide Web: http://www.arrl.org/

ARRL INFORMATION SERVER:
ARRL maintains an information email server. To receive an index of files on
the server, send a message to info@arrl.org. Leave the subject line

blank. On
the first line of your message, type SEND INDEX. On the second line,
type
QUIT. A list of all files on the ARRL infoserver will be emailed to
you.

ARRL BBS:
ARRL maintains a telephone bulletin board system; modem line is (860)
594-
0306. You need a computer, modem, communications software, and a long-
distance telephone line to access the BBS (the data word format is 8
bits, no
parity, and 1 stop bit).

ARRL FTP:
Amateur Radio software, distributed by ARRL is listed at a FTP site
maintained
by the Boston Amateur Radio Club. It is a public service of Oakland
University's Office of Computer and Information Services.
FTP: oak.oakland.edu/pub/hamradio/arrl/
World Wide Web: http://oak.oakland.edu/pub/hamradio/arrl/

SAREX ON THE WORLD WIDE WEB:
ARRL Web site: http://www.arrl.org/sarex/

AMSAT Web site: http://www.amsat.org

NASA's SAREX Web site: http://www.nasa.gov/sarex/sarex_mainpage.html

Goddard Amateur Radio Club Web Site:
http://garc.gsfc.nasa.gov/www/garc-home-page.html

Johnson Space Center Amateur Radio Club:
http://www.phoenix.net/~mbordel/index.html

W1AW BULLETINS:
ARRL's Amateur Radio station (call sign W1AW) transmits news bulletins
(9:45 PM, 12:45 AM EST) on the HF bands at 1.855, 3.99, 7.29, 14.29,
18.16,
21.39, 28.59 MHz and--in the Hartford, CT area--on VHF at 147.555 MHz.
Bulletins are also on Amateur packet radio.

AMSAT NET:
The AMSAT International Satellite Net on Tuesdays, 3.840 MHz, 0130Z to
0300Z, and on Sundays, 14.282 MHz, 1800Z to 2100Z, +/- QRM.

CAN I BECOME A HAM?
Amateur Radio operators, or "hams," are people from all walks of
life--no
matter your age, gender or physical ability. Getting started in Amateur
Radio
has never been easier! Contact ARRL to request a free Getting Started
package.

It contains details on your local Amateur Radio clubs, instructors, exam sites
and popular study guides.
Call ARRL's toll-free hotline: 1-800-32-NEW HAM (800-326-3942)
Why not get started, today!

ARRL BOOKSHELF
Call ARRL (860-594-0301) for book orders.

"Now You're Talking!" book (2nd ed) contains everything you need to pass
your Novice or Technician ham radio written exam.

"ARRL Technician Class Video Course" Learn the "ropes" with the "pros." You won't find a better course or a better deal anywhere. Five hours of excitement.

"ARRL "Tech Q & A,"in "question and answer" format for the code-free Technician exam. Brief explanations of the correct answers reinforce learning.

"The Satellite Experimenter's Handbook" has the information you need to communicate through, or receive signals from orbiting satellites and the
shuttle! Whether your interest is in ham satellites, weather satellites,or other
spacecraft, you'll find everything from setting up a ground station to antennas.

"ARRL Satellite Anthology" contains the best recent QST articles on amateur
satellites and spacecraft from OSCAR 10 to OSCAR 27, including: how to work DX via OSCAR 10 and 13, and how to get on the Pacsats and Russian "Easysats." There's even info about the planned "Phase 3D" Amateur satellite.

"Your Packet Companion" is perfect for the packet (computer) radio newcomer,
covers everything--from assembling a station to sending mail, from packet
satellites and spacecraft to the latest networking systems. Straightforward
writing and clear drawings get you on the cutting edge of digital ham radio.

"Practical Packet Radio" can make your life easier, whether you're setting up
your first packet station or exploring TCP/IP or another more-advanced technique. This book covers everything the active ham needs to know: setting
up a station, getting on the DX packet cluster, exploring bulletin boards and
satellites, and much more. A series of Appendices includes sources of

packet-
related hardware and software, a Glossary of Terms and the AX.25
protocol.

Won as a door prize at Dayton this year. Not into satellite operation.

- KC Tuner interface card (in factory sealed anti-static bag)
- Cable (8 pin DIN to DB25)
- KC Tracker software (Ver 2.43A)
- Manual

Asking $275. I will pay shipping ($$ COD) via Fedex. Please reply e-mail.

Hello,

I am new to ham sat and a looking for the BEST hardware & for this aspect of our hobby. Cost is not an issue, only QUALITY.

Any recommendations on rigs, antennas, rotors, control software, satellite tracking software, books, etc... would greatly be appreciated.

Thanks in advance,

Jim Hong - KA8ZGP

SB NEWS @ AMSAT $SPC1124
* SpaceNews 24-Nov-97 *

BID: $SPC1124

=========
SpaceNews
=========

MONDAY NOVEMBER 24, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* AMSAT-OSCAR-16 NEWS *
======================
AMSAT-OSCAR-16 continues to perform well in "pacsat" duty. The kernel is
reporting an uptime of over 1160 days. The following status message is
being carried by the beacon on 437.051 MHz:

PACSAT-1>AMSAT <UI>:
November 1997
PACSAT AO-16
Owned and Operated by AMSAT-NA
Command Team WJ9F, WD0E, VK7ZBX, KB5MU
AO16 Command Team <WJ9F>

* ITAMSAT-OSCAR-26 NEWS *
========================
ITAMSAT-OSCAR-26 was copied on its secondary downlink frequency of
435.822 MHz by KD2BD in New Jersey on 16-Nov-97 at 02:32 UTC. The
spacecraft reported a kernel uptime of over 56 days, and the beacon
carried the following status message:

IY2SAT-1>AMSAT <UI>:
*** 12th November 1997 ***
All sub-systems are OK.
Loading in progress.....
Please don't tx on uplink. Stay tuned for further news!
Best wishes from the ITAMSAT team.

* UoSAT-OSCAR-11 NEWS *
======================
During the period 14-Oct-97 to 16-Nov-97, UoSAT-OSCAR-11 continued to
provide good downlink signals on its 145.826 MHz beacon. Telemetry has
been nominal. The battery voltage has been steady at around 14.0 volts
```

for most of the time, although occasional values of 13.8 and 14.2 have been observed.

The spacecraft's internal temperatures continued to increase, reaching maximum values around 21-Oct-97 of 18C and 15C, for battery and telemetry electronics respectively. The temperatures have now started to fall, and at the present time are 13.6C and 10.6C. This change in temperature is due to variations in solar eclipse times, which have now started to increase.

Two WOD (Whole Orbit Data) surveys have been transmitted during the period. Channels 17, 18, 27, 28 (+X, +Y, -X, -Y facet temperatures), dated 16-Sep-97 and channels 10, 20, 30, 40 (-Y, +Y, -X, +X array currents) dated 29-Oct-97 were included in the surveys. These surveys have shown the effect of solar eclipses on array currents and external temperatures.

Followers of OSCAR-11 have noticed that the news bulletin has not been changed recently. Richard, G3RWL, has received very little feedback from his regular bulletin service, and at a recent AMSAT-UK committee meeting it was decided to discontinue the weekly postings and replace them by a static bulletin. This may be changed at monthly intervals and will contain items such as Keplerian elements and satellite frequencies. Many thanks Richard for providing this service for so many years -- well over a hundred bulletins. Your efforts are much appreciated.

UoSAT-OSCAR-11's operating schedule remains unchanged:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

Additional status blocks are also transmitted after each bulletin and between ASCII TLM and WOD.

The Mode-S beacon is ON, transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and is delivering only half power. This beacon is a useful test source for those testing Mode-S converters in preparation for the Phase 3D satellite. It is considerably weaker than DOVE-OSCAR-17, which should be used for initial testing. Any reports of reception of the 2401 MHz beacon would be most welcome, and should be directed to Clive Wallis at: g3cwv@amsat.org.

The 435.025 MHz (UHF) beacon is normally OFF. However it can sometimes be heard when the satellite is being commanded by ground control (ie. within range of Guildford, UK). When the 435 MHz beacon is transmitting, the 145 MHz beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit Web site sponsored by Clive Wallis, G3CWV. The site contains some software for capturing OSCAR-11 data, and

decoding ASCII telemetry and WOD. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded as new data is captured. The URL is:

http://www.users.zetnet.co.uk/clivew/

[Info via Clive Wallis, G3CWV g3cwv@amsat.org]

* SPUTNIK-40/RS-17 NEWS *
==========
Gerard Auvray, F6FAO, provided the following chart that can be used to determine the internal temperature of the Sputnik-40/RS-17 satellite based on the audio frequency of the "beeps" sent by its 145.820 MHz FM beacon transmitter:

50 deg C ----> 1361 Hz
30 deg C ----> 1290 Hz
25 deg C ----> 1261 Hz
10 deg C ----> 1208 Hz
0 deg C ----> 1131 Hz
-10 deg C ----> 1040 Hz
-20 deg C ----> 891 Hz
-30 deg C ----> 724 Hz
-40 deg C ----> 541 Hz

Reports can be sent to: Gerard.Auvray@bsf.alcatel.fr.

[Info via F6FAO]

* RS-17 TELEMETRY SURVEY *
==========
AMSAT France would like Radio Amateurs over the world to help them in collecting telemetry from RS-17 Saturday and Sunday November 22 and 23. This will help in verifying the parameters of the thermal model of the microsat that was computed before the launch. In turn, the program can then be used for the design of their next microsat, "Maelle".

The internal temperature of the microsphere can be evaluated from the tone of the "bip-bip" sound transmitted for 160 ms twice per second. In order to get a set of precise measurements, the frequency of the tone should be measured with a precision of 1 Hz. This can be achieved using direct digital audio recording of the beacon using a PC with a sound card connected to the audio output of the VHF receiver set in FM mode on 145.820 MHz +/-3 kHz (Doppler effect changes the frequency of the satellite RF carrier up to 3 kHz when the satellite is approaching your station and lower by -3 kHz when the satellite is receding). The receiver audio must be unsquelched. In order to keep the recorded files small, numeric samples can be performed at 8 kHz with 8 bit precision mono. One or two seconds of beacon recording in good receiving condition are needed. Save captured audio to .WAV file format and note the date and precise UTC time of reception. If you have a program than can accurately measure the audio frequency, send the value of the bip tone in Hz. If you cannot perform it, just send the WAV file ZIPped. The size should not be more than 16 Kb (1 or 2 seconds at 8 kHz, 8 bit samples,

mono). Up to now, reports of the frequency tone ranging from 1255 to 1300 Hz (corresponding to temperatures between 23 and 33 degrees Celsius) have been received.

Send your reports via packet radio to f6bvp@f6bvp.frpa.fra.eu or via Internet to f6bvp@amsat.org.

[Info via Bernard, F6BVP]

* SAFEX FREQUENCY CORRECTION *
==========
The table of SAFEX II frequencies listed in last week's issue of SpaceNews were accidentially printed in reverse order. The correct frequencies are listed below:

Repeater channel configurations for 2.0 kHz channel step transceivers:

Channel Downlink Uplink Doppler Offset
1 437.960 MHz 435.740 MHz +10 kHz 2.180 kHz
2 437.958 MHz 435.742 MHz + 8 kHz 2.184 kHz
3 437.956 MHz 435.744 MHz + 6 kHz 2.188 kHz
4 437.954 MHz 435.746 MHz + 4 kHz 2.192 kHz
5 437.952 MHz 435.748 MHz + 2 kHz 2.196 kHz
6 437.950 MHz 435.750 MHz 0 kHz 2.200 kHz
7 437.948 MHz 435.752 MHz - 2 kHz 2.204 kHz
8 437.946 MHz 435.754 MHz - 4 kHz 2.208 kHz
9 437.944 MHz 435.756 MHz - 6 kHz 2.212 kHz
10 437.942 MHz 435.758 MHz - 8 kHz 2.216 kHz
11 437.940 MHz 435.760 MHz -10 kHz 2.220 kHz

Repeater channel configurations for 5.0 kHz channel step transceivers:

Channel Downlink Uplink
1 437.960 MHz 435.740 MHz
2 437.955 MHz 435.745 MHz
3 437.950 MHz 435.750 MHz
4 437.945 MHz 435.755 MHz
5 437.940 MHz 435.760 MHz

A subaudiable (CTCSS) tone 141.3 Hz is required to access the SAFEX repeater. The channels are listed in order. When Mir first comes over the horizon, use the first channel in the list. When Mir is overhead, use the middle channel. When Mir is just about to go out of range, use the highest numbered channel in the list.

MIREX has created an Internet Web page containing information regarding Mir and the various Amateur Radio experiments taking place from the space station. The pages are still "under construction", but some good information can be gathered from what has been put together so far. URLs include the following:

I thought you AMSAT guys were rocket scientists & stuff (i.e. intelligent, decent people), not white-trash that spam Usenet newsgroups with commercials! Perhaps Vinnie is the exception, but anyway, these frequent AMSAT spams (in particular, to groups like rec.radio.swap/shortwave & scanner) tend to reflect poorly on AMSAT, not just Vinnie...

2852. 10-m antenna

Newsgroup: rec.radio.amateur.space
Date: 1997-11-23 00:00:00 UTC
From: Steven Alva <salva@pop3.concentric.net>
Message-ID: <347863D8.1B85768B@pop3.concentric.net>
Source record: 17674

I need some assistance in determining which type of antenna is best for 10-m reception
downlink. I have used in the past a simple longwire and a pre-amp, but I have never uplinked before and wondered if this is the best approach. I plan on using a "Eggbeater",
for uplink. Any help would be appreciated.

73's

Steve, KD6HHH

2853. Re: 10-m antenna

Newsgroup: rec.radio.amateur.space
Date: 1997-11-23 00:00:00 UTC
From: Rod Adkins <rodadkins@earthlink.net>
Message-ID: <34788E76.5ABC@earthlink.net>
Source record: 17675

I have had best success with a horizontal full-wave loop.
I have used this at various heights from 10 to 20 feet, and used a
wooden support for wire in a square configuration.
I used a coax balun to adjust the impedance from the nominal 100 ohm
loop to 50 ohms, but not convinced it made much difference!

I found the loop out-performed crossed dipoles, & much quieter than a
vertical. Used it successfully on RS-15 for transatlantic SSB contacts
when I was in Ontario, Canada.

Rod, VE3INE/W6

2854. Is there a VHF newsgroup?

SB SAT @ AMSAT $ANS-327.01
MIR FREQUENCY EXPERIMENTS
HR AMSAT NEWS SERVICE BULLETIN 327.01 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 23, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-327.01
As part of ongoing frequency experiments to improve Amateur Radio operations on board Mir, and to better understand how these frequencies will be effective on the International Space Station, Mir will begin a 2 phase frequency experiment beginning December 1, 1997 and ending on May 31, 1997.
For phase 1, a 70cm/2m crosslink experiment will operate for a 3 month period from December 1, 1997 up to March 1, 1998.
On December 1 the Mir operating frequencies will change to:
Uplink: 437.850 MHz Downlink: 145.800 MHz
Phase 2 of this experiment will use a 2 meter-only set of uplink and downlink frequencies. This phase of the experiment will begin on March 1, 1998 and will also be of 3 months duration.
This experiment was developed by the international partners in Manned Space discussions at the recent Toronto AMSAT-NA Space Symposium. It has been endorsed by the representatives present at the conference which included SAFEX, SAREX, AMSAT-UK, the IARU Region 2 President, the IARU Satellite Advisor, (ZS5AKV), ARI (Italy) and RAC (Canada). While not present at the Toronto meeting, the US Mirex team has also been consulted and have agreed with the spirit of this experiment.
All hope that this experiment will help further understand how best to accommodate future operations of Amateur Radio on Manned Space Vehicles.
[ANS thanks Tim Bosma, W6ISS, AMSAT's Manned Space Frequency Coordinator and Frank Bauer, KA3HDO, AMSAT-NA's VP for Manned Space, for the information that went into this bulletin item.]

SB SAT @ AMSAT $ANS-327.02
SPUTNIK MODEL UPDATE
HR AMSAT NEWS SERVICE BULLETIN 327.02 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 23, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-327.02
Reports continue to be received from around the world indicating that the working model Sputnik satellite launched Monday, November 3 from the Russian MIR Space Station is maintaining a readable downlink signal from its 100 milliwatt transmitter.
Many news organizations around the world have featured articles

on the satellite. The Newport News Daily Press in Newport News, Virginia ran a front page story that stirred a lot of local interest in the Sputnik project and also in the Langley Research Center in Hampton, Virginia. Many at Langley remember the excitement and increased funding for space flight research after the original Sputnik was launched.
Two hams, W8RVH and W8ZCF, have been making temperature observations on the satellite since its launch using an audio generator, frequency counter and oscilloscope, providing the following data:
UTC Date/Time Frequency/Hz Temperature/Deg C
06 Nov. 1997 14:26 1269.3 27.0
07 Nov. 1997 13:27 1257.4 23.0
08 Nov. 1997 14:06 1255.9 22.0
09 Nov. 1997 13:08 1248.4 19.5
11 Nov. 1997 12:49 1248.3 19.5
12 Nov. 1997 11:49 1244.3 19.0
13 Nov. 1997 09:12 1257.0 21.8
13 Nov. 1997 14:03 1241.0 18.0
14 Nov. 1997 12:05 1244.5 19.0
14 Nov. 1997 16:17 1245.0 19.0
16 Nov. 1997 14:19 1246.0 19.0
17 Nov. 1997 13:20 1243.0 18.5
W8RVH and W8ZCF are continuing temperature analysis on Sputnik 40 with a more detailed analysis now being made on the temperature recordings, prompted by a notation of a downward drift of temperature during the latest passes. This downward change is currently unexplained.
The satellite was built as a joint project by schools in Russia and Reunion Island, with technical assistance from AMSAT-France. Operating solely on internal batteries, the downlink signal of the 1/3 scale model is only expected to continue for the next few weeks.
[ANS thanks F6FAO, WB5POJ, W8RVH and W8ZCF for information that went into this bulletin.]

SB SAT @ AMSAT $ANS-327.03
DOVE QSL ANNOUNCEMENT
HR AMSAT NEWS SERVICE BULLETIN 327.03 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 23, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-327.03
QSL cards for the DOVE (DO-17) satellite are once again available. These special cards depict a dove carrying an olive branch in its mouth and will be provided to anyone who sends a report indicating they've heard the satellite. DO-17 transmits on 145.825 and 2401.220 mHz, and is presently sending 1200 baud AX.25 (standard packet) ASCII telemetry on 2 meters.
On S band, DOVE transmits PSK flags continuously, and then repeats the same data transmitted on 2 meters.

To receive a QSL for hearing DOVE, send a reception report and
SASE to:
Dianne White N0IZO
45777 Rampart Road
Parker, Colorado 80138-4316

SB SAT @ AMSAT $ANS-327.04
CUBA TO BE ACTIVE ON SATELLITE
HR AMSAT NEWS SERVICE BULLETIN 327.04 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 23, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-327.04
A group of hams from Sweden, Denmark and Cuba will be active on
50, 144 and 432 MHz, as well as the satellites, from Punta Corella,
Cuba, starting November 25, 1997. Operation will end December
first. Operators will be Soren, OZ1FTU, Johan, SM3UZS and Oscar,
CO2OJ.
Punta Corella (grid square FL11sg) is a rare, never-before-
activated grid on VHF. In addition to terrestrial VHF/UHF
frequencies, Oscar promises operation on RS-12, FO-20, FO-29
and possibly AO-10. This will be an excellent opportunity for
those who need to confirm Cuba via satellite operation.
This VHF/UHF station is part of an international effort for the
CQ WW CW Contest. The HF group will use the callsign T48RCT on
all HF bands from 160 to 10 meters, including WARC bands. Once
the contest starts they will switch to the callsign T49C.
Oscar reports T49 is a "never before used" prefix and T49C will
be the first Cuban station with only one letter as a suffix.
More information on this entire operation is available at the
FRC Web Page:
http://www.infocom.etecsa.cu/new/frc/frcuba.htm
or at the Sweden Group Site:
http://ham.te.hik.sel/clubs/sk0ux/T48RCT.htm
[ANS thanks Oscar, CO2OJ, and Jon, N0JK, for this information.]

SB SAT @ AMSAT $ANS-327.05
SHUTTLE AUDIO RETRANSMISSIONS
HR AMSAT NEWS SERVICE BULLETIN 327.05 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 23, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-327.05
Although the current shuttle mission will not include operation
on any of the Ham Bands, the Goddard Amateur Radio Club (WA3NAN)
in Greenbelt, Maryland reminds amateurs and SWLs world wide that
the club retransmits shuttle audio on 3.860, 7.185, 14.295 and
occasionally 21.395 and 28.650 mHz. Locally in the Greenbelt
area, shuttle re-transmissions are handled on 147.45 mHz FM.
The club will be on the air when all of the following

conditions are met:
1. the Shuttle crew is awake
2. a volunteer control operator is available
3. no power outages, snowstorms, thunderstorms or major equipment failures at the club shack.
The club has had a severe shortage of control operators lately, so if the station is not on the air, it is probably due to the non-availability of a control operator. Any licensed ham living reasonably close to the area can be a volunteer control operator. Please contact the club if you are interested in serving in this role.
The GARC Shuttle Retransmission FAQ can be found at:
http://garc.gsfc.nasa.gov/www/retransmission/shuttle_faq.html
The club can be reached by telephone at (301) 286-6673, or by mail at PO Box 86, Greenbelt, Maryland 20768-0086.

BID: $ANS-327.06
BJ Arts, W0TN, Chief Editor for these weekly bulletins, is now reported to be resting comfortably at home after major surgery. BJ sends his thanks all for their thoughts and prayers during his recent hospitalization.
In a related development, Dan James, NN0DJ, has now also volunteered to join the Editorial team for ANS, and will be assisting BJ with writing the bulletins each week. Dan brings a wealth of on-air broadcast experience and polished news writing abilities to the ANS team.
"Both of these gentlemen deserve our continued thanks for their efforts to keep us all informed of the latest AMSAT news week after week," said Keith Baker, KB1SF, AMSAT-NA's Executive Vice President. "We're most pleased to have Dan join the team and we're VERY glad that BJ is now resting at home and eager to get back into the Editor's chair. We all wish him a speedy recovery!" Keith said.

MIR (Simplex 145.985 mHz, FM)
The MIR crew believes the antenna coax for the MIR PMS station

may have been damaged during the space walk on Thursday, November 6. It has been suggested to the crew not to use the PMS station until the cable is repaired. The crew may attempt to fix the coax cable during a scheduled December space walk. The PMS station is expected to be off the air for the next several weeks.

SAFEX, MIR 70 cm Repeater
(Uplink 435.750 mHz FM, Downlink 437.950 mHz FM, subaudible tone 141.3 Hz)
The repeater is working and stations are encouraged to use the SAFEX II repeater. The crew members have the option of using the Mic on the repeater to talk to amateurs using the repeater.

RS-10
(Uplink 145.865-145.905 mHz CW/SSB, Downlink 29.36-29.4 mHz CW/SSB) Not operational at this time.
RS-12
(Uplink, 145.91-145.95 mHz CW/SSB, Downlink 29.41-29.45 mHz) Operational, now in mode A. Lots of activity over North America with good downlink signal reports being received.
RS-15
(Uplink 145.858-145.898 mHz CW/SSB, Downlink 29.354-29.394 mHz CW/SSB) Operational. (Hint: If SSB doesn't work for you, try CW. CW is very easy to hear on the downlink)!
RS-16
Transponder information on RS-16.
Uplink = 145.915 - 145.948 mHz; Downlink = 29.415- 29.448 mHz
Beacons = 29.408 and 29.451 mHz
Pwr 29 mHz Down = 1.2 W /4 W
Beacon 1 = 435.504 mHz
Beacon 2 = 435.548 mHz
Pwr 435 mHz Beacons = 1.6 W
RS-17
Operational. Beacon: 145.820 mHz
AO-10
(Uplink 435.030-435.18 mHz CW/LSB, Downlink 145.975-145.825 mHz CW/USB) Operational. Stacey Mills, W4SM, would appreciate any perigee observations of AO-10's beacon or transponder during the next several weeks until conditions begin to improve.
If his orientation figures are correct, AO-10 should be down to a solar angle of -84 degs with only 11% illumination.
[ANS thanks Stacey Mills, W4SM, for this report]
AO-27
(Uplink 145.85 mHz FM, Downlink 436.792 mHz FM)
Operational with lots of activity including QRP stations heard over North America.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update]
FO-20
(Uplink 145.9-146.0 mHz CW/LSB, Downlink 435.8-435.9 mHz CW/USB)

Operational. FO-20 is in mode JA continuously.
[ANS thanks Kazu Sakamoto, JJ1WTK, for this report]
FO-29
Voice/CW Mode JA:
(Uplink 145.9-146.0 mHz CW/LSB, Downlink 435.8-435.9 mHz CW/USB)
Digital Mode JD:
(Uplink 145.85, 145.87, 145.910 mHz FM, Downlink 435.910 mHz FM 9600
baud BPSK)
Operational.
[ANS thanks Kazu Sakamoto, JJ1WTK, for this report]
/EX
SB SAT @ AMSAT $ANS-327.08
WEEKLY SATELLITE REPORT PT 2
HR AMSAT NEWS SERVICE BULLETIN 327.08 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 23, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-327.08
KO-23
(Uplink 145.85, 145.9 mHz FM, Downlink 435.175 mHz FM,
9600 Baud FSK)
Stacey Mills, W4SM, has estimated from Keps that KO-23 will
not experience an eclipse again until December 12th. Starting
with the orbits of that day, eclipses rapidly increase in
duration from 2 to 11 minutes. Eclipse length will then
continue to increase, peaking at 35 minutes per orbit in the
December 28th thru January 4th time period. Eclipse length
will then begin slowly decreasing again. KO-23's download
efficiency has dropped dramatically due to the increasing
heat and its effects on the signal deviation.
[ANS thanks Stacey Mills, W4SM, for this report]
KO-25
(Uplink 145.980 mHz FM, Downlink 436.5 mHz FM, 9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for this report]
OSCAR-11
(Downlink 145.825 mHz. FM, 1200 Baud PSK. Beacon 2401.500 mHz)
Operating normally. During the period of October 14th through
November 16th this satellite has continued to provide good
signals on its 145.826 mHz beacon.
Telemetry nominal. The battery voltage has been steady at
around 14.0 volts for most of the time, although occasional
values of 13.8 and 14.2 volts have been observed.
The internal temperatures continued to increase, reaching
maximum values around October 21st of 18C and 15C for
battery and telemetry electronics respectively. The
temperatures have now started to fall, and at the present
time are 13.6C and 10.6C. This change in temperature is due
to variations in solar eclipse times, which have now started
to increase. Two WOD surveys have been transmitted during the
period. Channels 17, 18, 27, 28 (+X, +Y, -X, -Y facet

temperatures), dated 16 September, and channels 10, 20, 30, 40
(-Y, +Y, -X, +X array currents) dated 29 October. These show
the effect of solar eclipses on array currents and external
temperatures.
Followers of OSCAR-11 will have noticed that the news bulletin
has not been changed recently. Richard, G3RWL, has received
very little feedback from his regular bulletin service, and at
a recent AMSAT-UK committee meeting it was decided to
discontinue the weekly postings and replace them by a static
bulletin. This may be changed at monthly intervals and will
contain items such as Keplerian elements and satellite
frequencies. ANS thanks Richard for providing this
service for so many years...well over a hundred bulletins!
The operating schedule remains unchanged:
ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)
There are also additional status blocks after each bulletin is
transmitted, and between ASCII TLM and WOD.
The mode-S beacon is ON, transmitting an unmodulated carrier,
but telemetry indicates that it has partially failed, and
delivering half power. This beacon is a useful test source for
those testing mode-S converters, prior to the launch of P3-D.
It is considerably weaker than DOVE, which should be used for
initial testing. Any reports of reception on 2401mHz would be
most welcome. Please e-mail reception reports to g3cwv@amsat.org.
The 435.025 mHz beacon is normally OFF. However it can sometimes
be heard when the satellite is being commanded by ground
control, (i.e. within range of Guildford, Surrey, UK). When the
435 beacon is transmitting, the 145 beacon is normally OFF.
The data transmitted is mainly binary.
OSCAR-11 users are welcome to visit the G3CWV web site.
It contains some software for capturing data, and decoding
ASCII telemetry and the WOD survey. There is an archive of
raw data (mainly WOD) for analysis, which is continually being
expanded, as new data is captured.
The URL is - http://www.users.zetnet.co.uk/clivew/
[ANS thanks Clive Wallis, G3CWV, for this information]
AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86 mHz FM, 1200 bps
Manchester FSK.
Downlink 437.0513 mHz SSB, 1200 bps RC-BPSK 1200 Baud PSK.
Beacon 2401.1428 mHz.)
Operating normally.
Graphic information about WOD/Telemetry values can be found at:
http://www.arrakis.es/~ea1bcu/wod.htm

[ANS thanks Miguel A. Menendez, EA1BCU, for this report]
DO-17(DOVE)
(Downlink 145.825 mHz FM, 1200 Baud AFSK. Beacon 2401.220 mHz)
DOVE transmits on 145.825 mHz and 2401.220 mHz. It is presently sending 1200 baud AX.25 (standard packet) ASCII telemetry about every minute on two meters. On S band it transmits PSK flags continuously and also the same data as is sent on 2 meters.
[ANS thanks Jim White, WD0E, for this update]
WEBERSAT (WO-18)
(Downlink 437.104 mHz SSB, 1200 Baud PSK AX.25)
No report available at this time.
LUSAT-OSCAR-19
(Uplink 1200 bps Manchester FSK Uplinks: 145.84, 145.86, 145.88, 145.9 mHz FM, Downlink 437.125 mHz SSB, 1200 bps RC-BPSK.)
Operating normally.
Graphic and general information about Telemetry values can be found at:
http://www.arrakis.es/~ea1bcu/lo19.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report]
UO-22
(Uplink: 145.900 or 145.975 mHz FM. Downlink 435.120 mHz FM 9600 Baud FSK)
UO-22 is operating normally.
Chris Jackson, G7UPN/ZL2TPO, has reloaded the Store and Forward communications task on the UO-22 On-Board Computer. This task includes incremental checksums which should make uploading slightly faster. In the old task, once an upload was complete, the spacecraft had to perform the checksum on the complete file. Depending on the file length, this could take quite a long time. With the new task, the checksum is computed on the fly - while the data is actually being uploaded. Thus there is no need to recompile at the end of the transfer and this checksum delay is then removed. However, all files that were started before Chris loaded the task will receive a corrupt body checksum error when the upload is completed. If anyone gets persistent body checksum errors while uploading files to UO-22 would they please let Chris Jackson know as soon as possible.
[ANS thanks Chris Jackson, G7UPN/ZL2TPO, Ground station and Operations Manager of UO-22, for this report]
IO-26 (ITAMSAT)
Uplink 145.875, 145.900, 145.925, 145.95 mHz FM,
Downlink 435.822 mHz SSB, 1200 Baud PSK)
The actual beacon is:
26th September 1997 Happy birthday ITAMSAT!
Today IO-26 is 4 years old and all sub-systems are OK
Best wishes from the IT-AMSAT team
[ANS thanks Daniele, IK2XRO, and Piercarlo, IW2EGC, ITMSAT Command Station for this report]
[Please send your Satellite or News reports to ANS Editor BJ Arts, WT0N, via e-mail, at bjarts@the-bridge.net or to wt0n@amsat.org]

2857. AO-27 transmit power?

Newsgroup: rec.radio.amateur.space
Date: 1997-11-23 00:00:00 UTC
From: KB9KHM <kb9khm@sprynet.com>
Message-ID: <34786345.5464B4E2@sprynet.com>
Source record: 17679

I was just curious if anyone knew what the transmit power of Oscar 27
was?

Thanks!

2858. Re: 10-m antenna

Newsgroup: rec.radio.amateur.space
Date: 1997-11-24 00:00:00 UTC
From: ka3hsw@aol.com
Message-ID: <19971124171900.MAA25889@ladder01.news.aol.com>
Source record: 17581

In article <34788E76.5ABC@earthlink.net>, Rod Adkins <rodadkins@earthlink.net>
writes:

>
>I have had best success with a horizontal full-wave loop.
>I have used this at various heights from 10 to 20 feet, and used a
>wooden support for wire in a square configuration.
>I used a coax balun to adjust the impedance from the nominal 100 ohm
>loop to 50 ohms, but not convinced it made much difference!
>
>I found the loop out-performed crossed dipoles, & much quieter than a
>vertical. Used it successfully on RS-15 for transatlantic SSB contacts
>when I was in Ontario, Canada.

I concur.... I've tried dipoles, crossed dipoles, verticals, etc., but the
full-wave loop is by far the best. For the purists, the coax balun consists of
an electrical quarter-
wavelength of 75-ohm coax between your 50-ohm feedline and the loop. But, like
Rod, I don't think it makes a whole lot of difference in receive-only
applications like this......

2859. NORAD Two-Line Orbital Element Sets (TLE101)

Newsgroup: rec.radio.amateur.space
Date: 1997-11-24 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <65d2v2$60p$1@blackbird.afit.af.mil>
Source record: 17582

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2860. NORAD Two-Line Orbital Element Set: Space Shuttle (97328.37500000)

Newsgroup: rec.radio.amateur.space
Date: 1997-11-24 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <65d2fa$5rp$1@blackbird.afit.af.mil>
Source record: 17583

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

You are entitled to your opinion of course, and I am entitled to mine. It
wasn't spam. It was an informative message about a non-profit organization.
[fiscus@mcn.net (Vincent Fiscus, KB7ADL)]

You are welcome to your opinion. But you do need to make it clear when
something is your opinion, and that you are acting on your own, not as
a representative of that organization (whether or not you are a member).
Otherwise, you can get yourself in trouble, as well as the organization
that you intend to promote. Please be more careful in the future.

no one else in particular.)

2862. New Mir experiment [Was: ANS-327 WEEKLY BULLETINS]

Newsgroup: rec.radio.amateur.space
Date: 1997-11-24 00:00:00 UTC
From: John Mock <kd6pag@nospam.mocha.ecofe.com>
Message-ID: <4msosl38wp.fsf@spinner.ecofe.com>
Source record: 17585

SB SAT @ AMSAT $ANS-327.01
MIR FREQUENCY EXPERIMENTS
HR AMSAT NEWS SERVICE BULLETIN 327.01 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 23, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-327.01

As part of ongoing frequency experiments to improve Amateur Radio
operations on board Mir, and to better understand how these
frequencies will be effective on the International Space Station,
Mir will begin a 2 phase frequency experiment beginning
December 1, 1997 and ending on May 31, 1997.

For phase 1, a 70cm/2m crosslink experiment will operate for a 3
month period from December 1, 1997 up to March 1, 1998.
On December 1 the Mir operating frequencies will change to:
Uplink: 437.850 MHz Downlink: 145.800 MHz

Phase 2 of this experiment will use a 2 meter-only set of uplink
and downlink frequencies. This phase of the experiment will
begin on March 1, 1998 and will also be of 3 months duration.

I'm concerned whether this will be compatable with SAFEX, and it will
depend on how it's implemented. Clearly, having two uplinks close
together isn't a problem, but when SAFEX operates as a repeater, it's
also transmitting on 437.95 and that will desense the packet/voice
receiver. If the uplink were at least 20 KHz from 435.750 MHz, then
the MIR packet/voice receiver could share the SAFEX duplexer with the
repeater, but that might involve a new cable going between modules
(and probably a pre-amp to compensate for cable loss), which, given
the Spektr experience, they might want to minimize.

Furthermore, this is the harder way of doing, as the terrestrial
transmitter is responsible for compensating for doppler. From using
the SAFEX repeater, i find that i'ts not easy to get the uplink doppler
right by hand at 70cm.

Now, a downlink of 437.850 MHz, and an uplink of 145.800 MHz would make
a lot of sense from an amateur standpoint, as the existing duplexer
would protect the SAFEX receiver from desense from Mir packet/voice and
the SAFEX transmitter would not even be in the same band as the uplink.
And the terrestrial station would need to compensate for doppler largely
on the downlink, where (s)he could hear if (s)he were on-frequency, with
little or no doppler correction for the uplink. But i think the reason
for doing this experiment is to try to avoid interfere from and/or to
the non-amateur transceiver at 143.625 MHz. It might be worthwhile to

try this split for ISS as a phase 3 test at some point, particularly if filtering can protect the 143.625 MHz uplink.

I hope this experiment can be done in a manner that doesn't require disabling SAFEX (which was only recently brought back on-line at least part of the time). But i do respect that MIR packet/voice may be higher priority.
-- KD6PAG

2863. RS16 Transponder

Newsgroup: rec.radio.amateur.space

Message-ID: <01bcf8dc$07653ca0$f28d56cf@Kwiknet.ppp>
Source record: 17587

Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

2865. FS:Rf-Concept 4-110 70cm Amp

Newsgroup: rec.radio.amateur.space

Tim,
You are entitled to your opinion of course, and I am entitled to mine. It wasn't spam. It was an informative message about a non-profit organization. Of the 30 or so groups it could be relevant too. It was only posted to six. Have you never heard discussion about listening to satellites or MIR in the scanner newsgroup, or the SWL who listens to shuttle communications on his shortwave transmitted by amsat members at the Goddard amateur radio club in the shortwave newsgroup? Amsat is a place where information can be exchanged to help someone enjoy their radio hobby, whatever that might be.

I myself do not find it to be 'spam'. To me spam is unrelated junk
mail.

The P3D satellite is built with and run by donations from Hams like
myself. And it is the most expensive ham satellite ever.

SWL's will be able to listen to P3D and should find it very enjoyable.
Hams worldwide will be able to work P3D with low power and easy to
build antennas.

I would also have to say that this is NOT SPAM, in fact it's a dam
good idea to post it here. If we don't get more people interested in
ham radio, it will one day end. This Tim Tyler is making a big dea
lout of nothing. I picture him with his foot in his month right now.

On Sat, 22 Nov 1997 17:49:40 -0500, Tim Tyler <ttyler@mich.com> wrote:

I've had very good success using the Butternut HF5B butterfly (bow-tie?)
beam for 10M sat downlink. I believe that the loop is full-wave on 10M.

Dear Masters,

I am a newbie to these mews group. I going to build a low power FM transmitter which is able to cover a radius of 300 ft. I wonder if any of you have or know any webpages that can help me build this device.

Personal reply will be highly apprecaited as I don't visit these newsgroup often.

Thanx a million. I love you all.

Yick

Ramsey Electronics sells a Stereo FM Xmtr of 100milliwatts out which
is legal in US and Canada and can cover 300ft easily...
Check with them (I think they have a web page.....use a search engine
to check for it)

2884. FO-20/29 users in near / mid East or North Africa?

Newsgroup: rec.radio.amateur.space
Date: 1997-11-28 00:00:00 UTC
From: John Charles <jaycee@midmarsh.demon.co.uk>
Message-ID: <nkFgALApYvf0Ewmi@midmarsh.demon.co.uk>
Source record: 17606

Here in the UK I hear / work many European stations on the Fuji Oscars along with a few stations from the USA.

I have yet to hear any Canadian, Near Eastern or North African stations and wondered if there are operators in those areas working FO-20 or FO-29?

Occasionally the footprint will spread as far as India but apart from the USA I've not yet heard anyone outside Europe or had any responses from those areas to my CQ's.

Er not to pick nits...BUT...

On the FM band in the US, 100 mw out would NOT be legal...

AND, if you're talking about the FM-10, it is a myth that it puts out 100 mw (they're AM transmitter may, however)...the FM-10 and FM-10a only put out about 8-10 mw in stock configuration. Although, with a few simple mods invented by squest it is possible, with the stock transistor, to get 200-250 mw out of an FM-10. Technically, the part is rated at 250 mw but if you want to do that mod, you want to drop a little top hat heatsink on top. =-)

Oh yeah, although I'm not directly responding to you here...in it's stock configuration the FM-10 can cover much more than 300 feet with a well designed and properly located antenna. =-)

actually it runs about 22 milliwatts with the high power strap. If you mean the FM25. If you look at the FM10 its more like 10 milliwatts. None of the above are legal in the US with a good antenna! Its not output power but field strength. I run an FM25 into a 1/2 watt amp and feed a radioshack dummy load. I get a good pattern and am very legal. On the other hand run 10 milliwatts into a nice groundplane and you'll be outside the rules....73's

Hi. My name is TRouBLe MaKer. I have a ham and scanner related web site. Now, it is very easy to navigate (frames installed) !!

The contents are as follows:

- What's new ? (IC Canada Update etc., link to IC Canada's web site)

- Montreal Area Repeater Directory (including hidden illegal repeaters.) There is also a link to a page where you see all VE2 and VA2 (the province of Quebec) repeaters.

- Amateur Radio Basic Qualification Study Guide (online full version)

- General Information Sheet for Amateurs and Pros

- Amateur Radio Freqs and Countries concerned

- US Amateur Radio Exam Page

- Ham frequencies and British Columbia Frequencies

- Ham calling frequencies

- Ham license structure worldwide (Canada, US, Japan, Australia, New Zealand... and there are links that help you to obtain the Australian and New Zealanders license while you stay there !!)

- US Frequency Band Allocations (for each license)

- Amateur Radio Satellite Frequencies

- Space Station MIR Information Centre

- Amateur Radio Station Prefixes

- Royal Canadian Mounted POLICE 10 codes & International Q code list

- International Morse Code

- CB Information Desk

- International Air & Marine Frequencies

- Propagation General Information Centre

- HF Propagation PREDICTION online

- RS Scanner Info

- ADI's AT-600 Dual Band Information

- Cellular Phone Listening Centre (Cordless Phone will be
added soon !!)

- Radio Modification Centre

- VE7JPN & VA2QRU Station Equipments

It's at

http://www.radiotelephone.net/amateur/

See you there !!

A friend of mine did some calculations and he found that to be close to
legal the
output of the transmitter can only be 60 MICROWATTS INTO A 1/2 WAVE
DIPOLE!!
If you read the rules they say the unit cant have any kind of antenna
connector on it.
The antenna must be fixed to the unit.
LETS FACE IT WHAT THE REGS COVERING 88 - 108 MHz ARE FOR IS LOCAL

WireHead Prime (wiredone@raccoon.com) wrote:
: On the FM band in the US, 100 mw out would NOT be legal...

They get away with selling them from Ramsey because they are
exempt (kits) and the builder must comply with FCC rule.

: AND, if you're talking about the FM-10, it is a myth that it puts out
: 100 mw (they're AM transmitter may, however)...the FM-10 and FM-10a
: only put out about 8-10 mw in stock configuration.

I would like to say 2 or 3mw myself. It ain't much that's for
sure. A longer antenna helps, but a more efficient RF final is better.

: Although, with a
: few simple mods invented by squest it is possible, with the stock
: transistor, to get 200-250 mw out of an FM-10.

I was just going to say that. :) Plus, the parts needed to do
the mod to 250mw can be had at any Radio Shack. The mod to go up to
.940mw you need to purchase the transistor from an ECG, SK, or NTE dealer.

: Technically, the part
: is rated at 250 mw but if you want to do that mod, you want to drop
: a little top hat heatsink on top. =-)

Gets warm, but it won't die. I have an NTE-23 running without
heatsink right now, been running since turkey day. :) Output = 940mw
approximate. :) Running from a modified "Sound Feeder". :)

: Oh yeah, although I'm not directly responding to you here...in it's
: stock configuration the FM-10 can cover much more than 300 feet with
: a well designed and properly located antenna. =-)

Up high, to radiate out. :) 3rd story apartment advantage, eh
WireHead? ;)

My name is Dane Springer and I am 16 years old. I am sereously interested in pirate radio. I bought the Ramsy FM-10 and setup a j pole antenna on my roof. Suprisingly the signal travaled about 1500ft. I wouldf like to boost the power of my FM-10 to about 5-10 watts. I was wondering if i bought a 50 watt 2meter RF boster at radio shack would that work? My maximum I can spend is about $60. thanks.

> ....

http://www.cybercomm.net/cgi-bin/cgiwrap/slapshot/msrocks.sh

http://www.cybercomm.net/cgi-bin/cgiwrap/slapshot/vhfprop.sh

Also consider joining the VHF reflector:
To subscribe, send subscribe request to vhf-request@w6yx.stanford.edu

These are definitely the place for skeds and tracking what is happening
real time as far as meteors. The first two are more for short term
skeds, like you want one now or in an hour or so.

On the vhf reflector, requests for skeds generally start appearing a
week or so prior to the shower peak.

Good luck with the rocks. 73 de Dave, N0IT

I have a couple of PTS160 MHz synthesizers asking $450 shipped US48.

Specs

Frequency Range: .1000000MHz to 159.9999999 MHz
Frequency Resolution 1Hz
Control local by 10 position dial, TTL BCD or GPIB
Switching time 20 microseconds to 5 microseconds
Output level +3 to +13 dBm
Flatness +/- 0.5dB
Impedance 50 Ohms
Spurious Outputs -75 dBc
Harmonics -40 dBc
Broad Phase Noise -63 dBc (.5 to 15 KHz)
(1 Hz) -105 dBc @ 100Hz, -115 dBc @ 1KHz
Frequency Std. TCXO
External drive 5 or 10 MHz
Dimensions 19 x 5.25 x 18 inches
Weight 35 lbs

Check the pictures and specs at my page:

http://www.mindspring.com/~wave/sale.html

Thanks
Pieter N4IP

2895. Mod for FT-290R

Houston, Texas AMSAT Area Coordinator Bruce Paige, KK5DO, will be operating special event station W5H on several amateur satellites this weekend, November 29 and 30, 1997. Sponsored by the Clear Lake Amateur Radio Club of Webster, Texas, W5H is commemorating the end of the Atlantic hurricane season.
Bruce is planning operation on AO-10, FO-20 and 29, AO-27 and RS-12, from 0000z - 0600z and 1500z - 2100z on November 29, and 1500z - 2400z on November 30, 1997. W5H satellite equipment will include an Icom IC-821H and yagi VHF and UHF antennas. W5H will also be operating on all high frequency amateur bands from 160 through 10 meters.
Bruce suggest that satellite operators send W5H QSL card requests (W5H satellite contacts only) directly to him at the following address;
Bruce Paige KK5DO
PO Box 310
Alief, Texas
77411
Stations that make a successful satellite contact with W5H will receive a club certificate and the satellite contact QSL card.

BID: $ANS-334.04
Many stations, including Clive, G3CWV, and Charles, W9ODI have continued to observe changes in satellite temperature during RS-17 passes at different times of the day and night. Temperature differences are thought to be due to eclipses. A possible explanation of the recent fall in average temperatures may be that the duration of the eclipses has slightly changed.
G3CWV is using a program which checks the eclipse state every two minutes during a pass. Clive found that the percentage of full sunlight has fallen slightly since the initial launch. G3CWV has also used the same program to predict the eclipses of OSCAR-11, and has found the program to give a reasonable correlation, although it does tend to give somewhat early predictions of changes. This may be due to not computing the effect of partial eclipses.
W8RVH, Dayton, Ohio and W8ZCF, Cincinnati, Ohio also continue to take and analyze frequency data from Sputnik's "beep" tone. Their measurements as well as a report from IK1SLD in Italy, shows a decrease in temperature as the satellite proceeds thru the pass. However, in observing an adjacent pass 1 hour 36 minutes later, the temperature has usually recovered at AOS to the "general" higher level. When plotted on a day to day basis, W8RVH reports there appears to be a "sawtooth" pattern for each pass, with the average temperature over several days remaining fairly constant.
W9ODI reports on morning passes where the satellite is coming out of eclipse into sun, a rise in temperature. Chuck is also observing passes at night where the satellite is coming out of sun into darkness, and

reports the temperature is definitely dropping.
RS-17 is expected to continue operation into mid-December before its
internal batteries are exhausted.

SB SAT @ AMSAT $ANS-334.05
INTERNATIONAL SPACE STATION UPDATE
HR AMSAT NEWS SERVICE BULLETIN 334.05 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 30, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-334.05
Various published news reports are now saying that NASA
will not have the International Space Station fully assembled
until December 2003. NASA has pledged that the U.S. habitation
module, the astronaut living quarters, will be fully outfitted
by December of 2002. However, NASA is also promising that a
crew will be on the station starting long before 2002 ends.
AMSAT-NA's VP of Manned Space, Frank Bauer, KA3HDO, indicates
that Ham Radio's presence on the station should also happen far
sooner than the 2002 date. Frank reports that the current plan
is to operate the space station in a "crew tended" fashion
sometime beginning in early 1999, just a little over a year
from now!
In line with that schedule, Frank says that the ISS
Ham Radio team is now working VERY hard to incorporate the
first phase of the ISS Ham Radio project...a transportable
station...and deliver this equipment to the Johnson Space
Center in Houston, Texas for flight certification in June of
next year (1998). Delivery of that equipment to the
space station is now slated for December, 1998.
Stay tuned to ANS for more information on Ham Radio's planned
presence on ISS as it develops.

MIR
Dave Wolf has stated that powering up the radio is "On his List" and it is hoped that Mir will be back on the air soon.
As part of ongoing frequency experiments to improve Amateur Radio operations on board MIR, and to better understand how these frequencies will be effective on the International Space Station, MIR will begin a 2-phase frequency experiment beginning December 1, 1997 and ending on May 31, 1997.
For phase 1, a 70cm/2m crosslink experiment will operate for a 3 month period from December 1, 1997 up to March 1, 1998.
On December 1, 1997 the MIR operating frequencies will change to:
Uplink: 437.850 MHz Downlink: 145.800 MHz
Phase 2 of this experiment will use a 2 meter-only set of uplink and downlink frequencies. This phase of the experiment will begin on March 1, 1998 and will also be of 3 months duration.
SAFEX, MIR 70cm Repeater (Uplink 435.750 MHz FM, Downlink 437.950 MHz FM, subaudible tone 141.3 Hz)
The SAFEX, MIR 70cm repeater is not operational at this time.
[ANS thanks the MIREX team for this information]
RS-10
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)
Not operational at this time.
RS-12
(Uplink, 145.91-145.95 MHz CW/SSB, Downlink 29.41-29.45 MHz)
Operational, now in mode A. Lots of activity over North America with good downlink signal reports being received. T49C reported active from Cuba.
RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Operational. (Hint: If SSB doesn't work for you, try CW. CW is very easy to hear on the downlink)!
RS-16

Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 and 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W
Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W
RS-17
Operational. 145.820 MHz
QSL Information is as follows:
Sergej Samburov (or) FR5KJ Radio Club
PO Box 73 College Jules Reydellet
Kaliningrad - 10 City 103 Rue de la Republique
Moscow Area 10470 97 489 Saint Denis Cedex
Russia Reunion Island , France
AO-10
(Uplink 435.030-435.18 MHz CW/LSB, Downlink 145.975-145.825 MHz
CW/USB)
Operational. Stacey Mills, W4SM, would appreciate any perigee
observations of AO-10's beacon or transponder during the next several
weeks until conditions begin to improve. If his orientation figures are
correct, AO-10 should be down to a solar angle of -84 degs with only 11%
illumination. Send reports to w4sm@amsat.org
[ANS thanks Stacey Mills, W4SM, for this report]
AO-27
(Uplink 145.85 MHz FM, Downlink 436.792 MHz FM)
Operational with lots of activity including QRP stations heard over
North America. The control ops have programmed AO-27 to start earlier in
its pass.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update]
FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Operational. FO-20 in mode JA continuously.
[ANS thanks Kazu Sakamoto, JJ1WTK, for this report]
FO-29
Voice/CW Mode JA
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Digital Mode JD
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600
baud BPSK)
Operational. FO-29 was in JA mode on November 29, 1997.
[ANS thanks Kazu Sakamoto, JJ1WTK, for this report.]

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK)
KO-23 has variable, but generally low, downlink efficiency.
Stacey Mills, W4SM, has estimated the keps show that KO-23 will not
experience an eclipses again until December 12th. During the orbits of
that day, eclipses rapidly increase in duration from 2 to 11 minutes.
Eclipse length will then continue to increase, peaking at 35 minutes per
orbit in the December 28th thru January 4th time period. Eclipse length
will then begin slowly decreasing again. KO-23's download efficiency
has dropped dramatically due to the increasing heat and its affects on
the signal deviation.
[ANS thanks Stacey Mills, W4SM, and Jim Weisenberger, AA7KC,
for this report]
KO-25
(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM, 9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for this report]
OSCAR-11
(Downlink 145.825 MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz)
Operating normally. During the period of October 14th through November
16th this satellite has continued to provide good signals on its 145.826
MHz beacon.
The operating schedule is unchanged.
ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)
There are also additional status blocks after each bulletin is
transmitted, and between ASCII TLM and WOD.
The mode-S beacon is ON, transmitting an unmodulated carrier, but
telemetry indicates that it has partially failed, and delivering half
power. This beacon is a useful test source for those testing mode-S
converters, prior to the launch of P3-D. It is considerably weaker
than DOVE, which should be used for initial testing. Any reports of
reception on 2401.00 MHz would be most welcome. Please e-mail reception
reports to g3cwv@amsat.org.
The 435.025 MHz beacon is normally OFF. However it can sometimes be
heard when the satellite is being commanded by ground control, (i.e.
within range of Guildford, UK). When the 435 beacon is transmitting,
the 145 beacon is normally OFF. The data transmitted is mainly
binary.
OSCAR-11 users are welcome to visit the G3CWV web site. It contains
some software for capturing data, and decoding ASCII telemetry and the
WOD survey. There is an archive of raw data (mainly WOD) for analysis,
which is continually being expanded, as new data is captured.
The URL is - http://www.users.zetnet.co.uk/clivew/

[ANS thanks Clive Wallis, G3CWV, for this information]
AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86 MHz FM, 1200 bps Manchester FSK
Downlink 437.0513 MHz SSB, 1200 bps RC-BPSK 1200 Baud PSK.
Beacon 2401.1428 MHz.)
Operating normally.
State of the batteries at the end of an eclipse orbit.

DO-17(DOVE)
(Downlink 145.825 MHz FM, 1200 Baud AFSK. Beacon 2401.220 MHz)
DOVE transmits on 145.825 MHz and 2401.220 MHz. It is presently
sending 1200 baud AX.25 (standard packet) ASCII telemetry about
every minute on two meters. On S band it transmits PSK flags
continuously and also the same data as is sent on 2 meters.
Jim White, WD0E, reports that QSL requests for DO-17 have been well
received, with recent requests including one from Germany. Jim notes
he will be putting the QSL availability info on the DOVE two meter
broadcast in the next few days.
[ANS thanks Jim White, WD0E, for this update]
WEBERSAT (WO-18)
(Downlink 437.104 MHz SSB, 1200 Baud PSK AX.25)
No report available at this time.
LUSAT-OSCAR-19
(Uplink 1200 bps Manchester FSK Uplinks: 145.84, 145.86, 145.88,
145.90 MHz FM, Downlink 437.125 MHz SSB, 1200 bps RC-BPSK.)
Operating normally.
Uptime is 893/08:21:52. Time is Sat Nov 29 22:27:02 1997
[BEACON]
November 6 - 1997.
BBS is open.
Uplink qrg: 145.840, 860, 880, 900
Norberto - LU8DYF.

http://www.arrakis.es/~ea1bcu/lo19.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report]
UO-22
(Uplink: 145.900 or 145.975 MHz FM. Downlink 435.120 MHz FM
9600 Baud FSK)
UO-22 is operating normally.
Chris Jackson, G7UPN/ZL2TPO, has reloaded the Store and Forward
communications task on the UO-22 On-Board Computer. This task includes
incremental checksums which should make uploading slightly faster.

In the old task, once an upload was complete, the spacecraft had to
perform the checksum on the complete file. Depending on the file
length, this could take quite a long time. With the new task, the
checksum is computed on the fly - while the data is actually being
uploaded. Thus there is no need to recompile at the end of the
transfer and this checksum delay is then removed.
However, all files that were started before Chris loaded the task
will receive a corrupt body checksum error when the upload is completed.
If anyone gets persistent body checksum errors while uploading files to
UO-22 would they please let Chris Jackson know as soon as possible
[ANS thanks Chris Jackson, G7UPN/ZL2TPO, Ground station and
Operations Manager of UO-22, for this report]
IO-26 (ITAMSAT)
Uplink 145.875, 145.900, 145.925, 145.950 MHz FM, Downlink 435.822 MHz
SSB, 1200 Baud PSK)
IY2SAT-1>AMSAT <UI>:
12th November 1997
All sub-systems are OK.
Loading in progress.
Please don't tx on uplink. Stay tuned for further news!
Best wishes from the ITAMSAT team.
[ANS thanks Daniele, IK2XRO, and Piercarlo, IW2EGC,
ITMSAT Command Station for this report]

You might want to "sereously" consider forgetting the whole thing. Mom
and Dad may become "sereously interested" in your activities when the
Federal Marshals knock on the door of the family home intent on
confiscating every piece of electronic apparatus within. You might be
"sereously" in trouble.

Dane, you can remove all the rec.radio.amateur.* groups from your posting.
People on the ham radio newsgroups are more likely to turn you into the
FCC than to help you violate the law.

Could someone please forward the schematics for a simple solar receiver to monitor the sun. I live in a small apt. so I am looking for something that does not require to much space and can be connected to my computer that is running win 95. so software would be appreciated. Also interested in meteor observing any recommendations about building or modifying a receiver for a limited amt. of money?

Thanxs

Message-ID: <65tajg$im7$1@usenet85.supernews.com>
Source record: 17623

Q. I would like to know the minimum length of boom required to work the popular birds in the 2/70 mode. Do I need to use 20 footers or can I get away with the 12 or 14 foot antennas?

Q. Would I regret setting up a station with shorter booms and have little or no success? I don't need everything but do want to try my hand at satellites and have limits to size of array.

Thanks to all replies!

Good idea. I'm curious too. Does the sun spit out any interesting
signals that we could receive at home? Actually, if I just turn
on an AM radio -- isn't some of the daytime static coming from the sun?

I don't intend to break the law, so, please discuss FM transmitters within
legal limit only. Transmitting without permit is very illegal. Don't take
your chance.

Thank you all of you. It really helps.

Not anymore. Most are able to vote, some even to bear arms again.
Federal prison is usually pretty good. The standards are higher, and
the food is better. Most federal prisons now have family visits
with time for sex and a haircut.

The one you want to stay away from, is the Oklahoma City holding
facility. Senator Nichols is here this week trying to figure out
how a prisoner was beaten, head slit open, and blood smeared all
over the walls, was pronounced dead of suicide. The guy was a
petty criminal.

Since more laws are being created every day (mostly contraband laws,
such as Freon, Video Tape Rentals, listening to prohibited frequencies,
etc) most of us will spend time in prison before we die.

Just look at all the crooks in Washington. Most never even were
disbarred.

FYI

Steve

I will answer your question:
The Radio Shack Power Amp requires more drive than your FM-10 can supply. Check out MYCAL's web page for a more suitable one that will boost the FM-10 to something of your liking. Try this one...
http://fov1.fov.uni-mb.si/~ufopra374a/index.html
or this one...
http://www.paranoia.com/~filipg/HTML/LINK/F_FM10.html

friend,
Lute

>
>Thanks to all replies!

The response to this will have to be subjective. ...It all depends...
If you are talking about the LEO birds, no problem, but if you want
to use AO-10 then:

Do you also have limits on the quality of the coax or hardline? How about
the preamps...do you have good ones that you can mount at the antennas?
How much power will you be able to run? Do you have a good DSP for reducing
noise?
If you have top notch equipment and are willing to dig
into the noise for signals, then small antennas will be fine for AO-10.

Ken K5MBV

What you need is a receiver on any frequency high enough for
atmospheric noise not to be an issue (about 30 MHz will do),
and an antenna.

What you'll hear is a part of the sky where the background hiss
is louder than in other areas. You can integrate the noise
to sharpen responses, which is where computers come in handy.

Snoop around for references on radio astronomy. There are lots.

AM radio daytime static is generated in the atmosphere, BTW,
and is not of celestial origin.

That should be more than sufficient for the LEO birds (simple groundplanes
have been used). To use Oscar 10, the bigger antennas really help, and they
may be useful for P3D too despite the higher power it will run. The better you
can hear, the lower power the other fellow has to run.

>Q. Would I regret setting up a station with shorter booms and have little or
>no success? I don't need everything but do want to try my hand at satellites
>and have limits to size of array.

Jump in with even simpler antennas. You can always upgrade to bigger
antennas later if you feel the need. Look in the Satellite Experimenter's
Handbook for some simple antenna ideas you can *build*. There's no
need to spend hundreds to get started. The big antennas require much
better pointing accuracy, and that can be expensive. Use simple low
gain antennas to start, you'll have enough to do without worrying about
constantly repeaking your antennas.

Yup, looks like it. Strange isn't it? People leave tyranny all
over the world, and come to Amerika, HOPEFULLY to find freedom, only to
find that in Amerika, a person can be JAILED for committing an act of
civil disobedience (read: non-violent crime). Isn't it just incredible
that WireHead and I are going to have to go to prison for committing the
vile act of EXERCISING OUR FIRST AMENDMENT RIGHTS? However, isn't it even
more incredible that _YOU_ SOMEHOW ACCEPT THIS AS BEING OKAY? :-/

Recently in the news an immigrant from Russia came here 22 years
ago and started a plastics company. A perfume company ordered viles from
him to package their product. He set to manufacturing these small viles.
Drug dealers found the viles to be excellent packaging for crack cocaine,
since the immigrant had produced a large number of them, and sold the
surplus through various outlets as surplus packaging. Thousands ended up
on the streets used to package crack. He was arrested and charged with
conspiracy to distribute crack cocaine. His production records showed the
surplus to be ABLE to package approximately 10 tons of crack, thus he was
charged with conspiracy to distribute 10 tons of crack, punishable by life
imprisonment. LIFE IMPRISONMENT FOR MANUFACTURING PLASIC VILES THAT
COULD HAVE BEEN USED TO PACKAGE CRACK COCAINE! All of his personal
assets, his family home, his factory were all seized, he was left without
money to pay for a decent lawyer to defend himself, and his court-
appointed public defender sold him down the river by convincing him to
sign a statement of guilt, which later was used against him.

A man leaves the despotic regime of the USSR and comes here in
search of freedom, only to find that his hard work to build an industry
here can be dashed to the rocks by criminal prosecution, and by civil

forfeiture, all without HIM actually committing any crime. The man's name is is Sam Zhadanov, and you can search for news articles yourselves if you believe this is so incredible that it can't be real. Or better still, write to the man yourself, he is currently service life imprisonment in a federal slave labor camp, in Pennsylvania. His address appears below...sq

SAM ZHADANOV, REG #42489-053
ALLENWOOD FEDERAL PRISON WORK CAMP
MONTGOMERY, PENNSYLVANIA 17752

2916. GE GL-6299 preamp (10 meters)

Newsgroup: rec.radio.amateur.space
Date: 1997-12-02 00:00:00 UTC
From: nvjims@aol.com
Message-ID: <19971202024200.VAA03191@ladder02.news.aol.com>
Source record: 17488

Hi,
I have aquired a two stage preamp using the General Electric GL-6299 tubes.
So far, it looks like one side of the filament is connected internally to the
cathode and the circuit seems similar to one in QST Dec. 1956 page 42 which is
for the 416A tube.
I'm looking for the specs on the tube, plate voltage, filament voltage, etc.
I hope to use this on the RS satillites.
THese tubes were originally used in telephone microwave gear in the early
50's and are about the size of your little finger with several bands and a pin
on each end. They are gold plated and ceramic construction.

Thanks for the help.

Steve,
The rightness of an act, has very little to do with the lawfullness
of an act, which is after a fashion your point Steve. Really Flaming
Ken for pointing out this fact, as well as the suggestion that the rest
of us hams, are not right in the head for KNOWING and advising someone
of what the Law is, and the consequences of breaking it. I happen to
feel that the FCC rules on the subject are way too restrictive (oh for a
spell checker under netscape) on this subject, but alas for the present
they are the rules.

As to moving, if you learn of a country not going down this path
of lawing us to death, do let us all know.

Don't know about minimum length booms but I work FO-20, FO-29 and AO-27
using a 7 element ZL special (about 6 ft boom) for the 2m uplink and a
44 el Jaybeam (boom about the same length) for 70 cm downlink. These
work fine down to about 1 degree above the horizon in spite of being
only 25 ft above the ground and in a fairly built-up area. Not so good
when the sat is really high as I don't have elevation control as yet.

Uplink is possible using my tri-band vertical but suffers from signal
fading. Max power used here is 40W

Have a look at the FAQ's on the Amsat www site - you'll find all sorts
of useful info. http://www.amsat.org/amsat/articles/

China. No radio rules at all. Run what you brung. No license required.
No enforcement at all.
Philippines. Same as above.
Indonesia. Same as above.

By the way, is this FM10 thing you guys are discussing a digital transmitter ?

I work FO-20 and -29, and AO-27 with a pair of 8 element
Jbeam brand yagis, rg-389/u (extreme low loss coax) and
10 watts on 2m. For the 70cm I have a homemade
13 turn axial mode helix and rg-8/u and also 10 watts.
Neither use preamps.
The uplink antennas are aimed horizontally, the downlink is inclined
about 15 degrees. I have only azimuth control.

I have gotten cw and ssb signals through AO-10, but only near
perigee. I am getting a 100w amp and 9913 coax
for 70cm and hope to have better success with AO-10,
assuming it cooperates.
I can hear AO-10 reasonably (when it is being
reasonable :-) even at apogee. I may get
a mast mount preamp depending on how the above additions fare.

Pictures of the stuff can be found at
http://www.qsl.net/kc6uut/rigs1.html

73 and I hope to work you on the birds!

And so you're going to recommend that nothing be said about this to him,
because by doing so, it might destroy his 'spirit' to pursue pirate
radio? In other words, by your silence, you will cause others to become
victims of the legal system?

I think you're the one that should go away. Permanantly.

Good, when are you going? Their loss will be our gain.

Oh boy, our savior at last!!!! We are really glad to know you are
suffering
so much for our good.

2927. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1997-12-03 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <662809$hp8$1@blackbird.afit.af.mil>
Source record: 17499

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-four character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

Line 1
Column Description
01 Line Number of Element Data
03-07 Satellite Number
08 Classification (U=Unclassified)
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Day of the year and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
45-52 Second Time Derivative of Mean Motion (decimal point assumed)
54-61 BSTAR drag term (decimal point assumed)
63 Ephemeris type
65-68 Element number
69 Checksum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69 Checksum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 14
1 23455U 94089A 97320.90946019 .00000140 00000-0 10191-3 0 2621
2 23455 99.0090 272.6745 0008546 223.1686 136.8816 14.11711747148495

Actually, if you study history, most of the colonists in early
America were loyalists to the crown. It was something like 3% of the
population that wanted independence and freedom, all others liked being
surfs and serving a king, paying heavy taxes to the crown.....sq

(the minority won, mostly because they fought for freedom while the
hessian and british soldiers fought for money. Fighting for an ideal
makes you want to fight harder, suffer more, and give a damn. The Hessian
mercenaries and british soldiers fighting here were only interested in
getting paid for their service, they didn't care if they won or lost. The
Americans however, were willing to die for what they believed in, while
the hessian mercinaries and british soldiers wanted to live at all cost.)

Ken, (and I think I speak for many) I pity you.

People like you permitted McCarthy to have his way.
People like you blame the victim of injustice.
People like you just sit around and smugly proclaim "That's the way it is!"
and can't be bothered to stand up to make it any better.
People like you sat around and said, "But England protects us...why do we
want freedom. We don't like it either but that's the way it is."

You're wrong and you have no courage. I just want you to know that.

Oh, and by the way, don't call us kids. While you PLAY with your overgrown
walkie talkies with your friends, we're out here genuinely suffering trying
to make America more free, which will benefit you in the end.

I would recommend that you stop underestimating his intelligence.

> I think you're the one that should go away. Permanantly.

I know you do. That would be easier. If everyone we didn't like would just
go away. Wouldn't it be dreamy???? That's the way people like you think...
whatever frightens you or is unpleasant, just make it go away. I believe the
Nazis made a few million Jews and others go away. I believe we, as Americans,
made a few million Native Americans go away.

I instructed you to leave people alone, implying that if that meant you left
this thread well so be it. You respond by suggesting I should be imprisoned
forever (IE the Permanently remark). Does the thought of fellow Americans
being imprisoned forever for violating an Unconstitutional Federal Regulation

make you feel all warm and fuzzy inside? What kind of sicko does that make YOU?

In either case, you're not trying to protect him; you're trying to protect the government and corporate America. Why? What is your vested interest?

WRONG. I never told you to go away. I told you to leave people alone.
Telling you to go worship Hitler or Stalin does not imply that you are not
welcome to return at any time after you've prayed to them for whatever
evil regime it is you desire.

You told ME to go away PERMANENTLY. Quite different.

BUZZ You lose.

Guess what. I'm going to take pity on you and GIVE you the last word.
That's the only reason you're involved in this thread anyway. To win.

I'm involved because I wanted people to know that your point of view is skewed
and biased by the fact that you are protected and privileged by an organization
that keeps everyone (including you but you don't realize it) from expressing
yourself to the masses with the same effectiveness as a giant wealthy corporation
for no more reason than that that giant wealthy corporation has given them blood
money.

Enjoy your repeaters and all your special frequency allocations but, in a few years, when micropower broadcasters fill the airwaves with relevant, timely information that serves the communities they broadcast in...and those same giant corporations have convinced the FCC to take away your allocations one by one and turn them over to commercial services, well don't come crying about it here. I don't think you'll get alot of sympathy. Maybe, then, you'll have to be the pirates.

At any rate, you win we're all going to jail, we're completely wrong and our victories are meaningless. You can go back to your safe little hamshack now and tell your buddies on 2 meters that you've saved the world from freedom for one more day.

```
HAM RADIOS
FOR SALE
FT 757GXII= $900
1.5 to 30 Mhz., output 100 watts PEP
TM-401B = $300
UHF FM, 430 to 440 Mhz., output 5/25 watts
TR-9130 = $300
2m all mode, 144 to 148 Mhz., output 5/25 watts
TR-9500 = $300
UHF all mode, 430 to 439.999 Mhz., output 1/10 watts
Multi-Mode Data Controller = $180
MFJ-1278, packet, RTTY, ASCII, CW, Fax, SSTV, AMTOR.
Antenna Tuner = $200
MFJ-986, 1.8 to 30 Mhz., handles up to 3KW
Radio Direction Finder = $175
(Dick Smith) with 4' square antenna array (mobile).
Will consider reasonable offers plus shipping cost if neccessary.
All with owners manuels.
Ask for Joe, WI0X. - 816-483-2037
email = restar@idir.net

You call little boys who want to play radio playing acid junk rock
noise, spewing
divel with every other word being a four letter vulgarity, and screaming
anti-everything, which is what most micropower broadcaster do, relevant,
timely information that serves the community?
Give me a break!!!!

You haven't had any victories yet, and not likely to until you clean up
you act.

As I said in my post, "which is what most microbroadcasters do", you are obviously not one of the "most". You are to be congratulated.

2942. NORAD Two-Line Orbital Element Set: Space Shuttle (97337.25000000)

Newsgroup: rec.radio.amateur.space
Date: 1997-12-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <664tba$3k5$1@blackbird.afit.af.mil>
Source record: 17514

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great shape almost like new. Email: n2rif@amsat.org You can try calling but my phone is usually busy cause Im on the net most of the time. My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is assembled. Shipping will probably be a bit hard to re-package. So anyone who is within driving distance should probably re: My qth is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Source record: 17517

Hello All;
I'm selling a "like new - used 9 times" Mirage B 1016G [made
by KLM not by MFJ] Pre-amplified 10w-in 160-170w-out 2mtr
amplifier with all orignal boxes & docs.
Worked the "Sats" with this amp & has super preamp. Reason
for sale is strictly financial. I am asking $285 + shipping OBO.
Sorry No CODs...
Please re: me via email: n2rif@amsat.org Or Packet
N2RIF@K2UL.NJ.USA.NOAM. You can also try
calling but my phone is usally busy. My ph# is 609-386-9382..
Thank you for reading my bulletin. Thomas J or just T.j. -73

2946. 10M downlink antennas

Newsgroup: rec.radio.amateur.space
Date: 1997-12-04 00:00:00 UTC
From: Jeff Griffin <kb2wqm@amsat.org>
Message-ID: <3486CDBE.77EA09E6@amsat.org>
Source record: 17518

I'm currently using a 1/4 wave vertical (radiator angled 30 degrees'), and a 1/4 wave crossed dipole for 10 meter downlink receive. Switch selectable. Does anyone have something that would have more gain, perhaps several 1/4 wave verticals phased together? I would like to improve my downlink signal somewhat, but have run out of ideas. Any input from anyone that is using anything different I would like to hear from.

Jeff kb2wqm FM29pe

Sorry, just can't let this one by:

Ummmmm...since when is it illegal to hate or be discontented with the government? And in what way does hating the government or being discontented with it justify breaking down a guy's door, handcuffing him on the floor (pointing a gun at his pets and yelling, "freeze or I'll shoot" to be funny or something) and then taking away everything electronic that he owns?

And, if pirates are such evil criminals, why are they only RARELY charged with an actual crime? Most of the time their stuff gets taken under civil forfeiture laws but they never get tried in court for their alledged crimes.

Sounds like they're guilty until proven innocent to me.

What's next? Maybe burn someone at the stake for having an 'evil eye'? Round up a bunch of minorities and put them in a camp?

Do you have any idea how stupid you sound? You basically just said that people who oppose the government should be punished for it.

You're completely out of your skull. Like I say, when the FCC pulls your allocations and auctions them off for commercial services don't come crying here. You won't get alot of sympathy.

Wirehead Prime

Oh, for crying out loud! Get over yourself, kid. Pirate radio is
about as much about "saving America" as was Timothy McVeigh, although
on a much lower level of insanity.

"Saving" America involves a lot of hard work in the political
trenches, not playing silly defiance games that only get you blasted

by the existing power structure.

Now really, I'm anything but a "little boy", I just like playing the Blues, the local station (1 only w/i 25 miles) plays regular ol' crap and I hate it. I asked around at the local beer pub re:what they'd like in a radio station..."the blues and nothin' but" was thier answer. I gave 'em what they want, it's clean, professionally operated w/ free ads for all comers. But I'm hardly a "little boy".

Every day is a victory. I've been 24/7 now for almost two years. They love it, I love doin' it. No screamin', no cussin', just the blues, a few free ads and that's it. A little local news once a day to keep everyone appraised. It's fun and I'm hardly harming anyone with my lil' 20 Watts of clean RF.

2950. NORAD Two-Line Orbital Element Set: Space Shuttle (97338.36179398)

Newsgroup: rec.radio.amateur.space
Date: 1997-12-04 00:00:00 UTC

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Wirehead,
He will get sympathy tho'...he will. We'll throw in with his poor folks too and help them out, it's in our blood. They are just plain jealous, they are driven by fear and freedom means nothing to them. Pay them little attention 'til they have a need, then see who they come whinin' to.
friend,
Lute

Sputnik-40 (RS-17) has a nearly-overhead pass here in San Diego today at 4:50pm local time. I want to announce a demo here at work, but haven't tried to hear it for several weeks. Is the transmitter still working? All I need is a single quick response. I want to be sure of success before getting 10's of people outside to listen.

I noticed on several occasions that to get a QSL card or certificate from a satellite (i.e. DO-17 or RS-17), that a signal report must be written. What format do these reports take, and how does one write one up?

thanks,
Tim, AB7LP: ab7lp@qsl.net

"The ideas of the ruling class are in every epoch the ruling ideas, i.e., the class which is the ruling _material_ force of society, is at the same time its ruling _intellectual_ force."

The slow, but steady drift towards anarchy continues.

We are cursed with a President who rejects all standards (legal and moral) that have applied to all previous presidents, and a citizenry who now believe they may freely make their own rules.

I guess it has been a pretty good "run", this great experiment, America. Count the days - we cannot long survive when selfishness prevails. Such was not the nature of the foundational expectations of our founders - our system will not tolerate pervasive lawlessness.

Too bad too, this is the best system ever implemented in the history of humanity. I pray that the completion of the disintegration may be stalled until my children are old enough to cope better. :-(DavidC

Ah, I see. The FCC is going to assign one microbroadcaster for each local
beer pub. How meaningful ! Shouldn't take more than about 2 microwatts to
cover it, though. Ought to be able to squeeze in quite a few on the same
frequency if you space them about a block apart.

try two 3 element yagis, one vertical, one horizontal, with a 1/4
wavelength jumper between them, this will give a circularly polarized
yagi, better gain and reception for satellite than a quarter wave
vertical.
got a big yard? try a 10 meter horn. ;')

Yes, but what if everyone in your city got on the air with their own
lil' 20 Watts of clean RF? Pretty obvious that no one could hear
anything. Thats why they came up with rules. I haven't checked recently
but when I was younger, it wasn't out of reach for someone to get on the
air with a 250 Watt legal station. Think about it.

Best regards,

Art Borg

I obviously don't give a damn what the FCC does, says or makes as
'rules", I, as I said, am absolutely alone in what I am doing in my little town.
The "local" station here is AM and could care less. The beer pub was only the germ
of the idea, not the base of operations, though we're now toying with the idea of
direct broadcast's when certain blues artists are there. The closest FM station is
25 miles away and is 10 MHz higher than my signal. There is nothing to argue
about.

Well, that's why they *say* they came up with "rules" but some people
and views of radio history suggest otherwise. It was the commercial
interests that first lobbied for the "rules" in the first place....

No The Flunked Clown College has stated in some of its legal papers tha
the band wont work with a bunch of lower power stations on it!
There should be 100kw stations only! A few in each state if you beleve
what the fcc has to say!
Big Da Radio Free indianapolis

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* 26TH ANNUAL STRAIGHT KEY NIGHT ON OSCAR *
==========
You're most cordially invited to join in the 26th annual Straight Key Night
on OSCAR, sponsored by AMSAT-NA for Amateur Radio satellite enthusiasts
worldwide.

It's entirely unofficial: no rules, no scoring and no need to send in a log.
Just call CQ SKN in the CW passband segment of any OSCAR satellite from 0000
to 2359 UTC on January 1, 1998, or answer a CQ SKN call from another station.
OSCAR Zero (EME) contacts count too. Of course, all SKN operating must be
done with a straight hand key.

Those participating are encouraged to nominate someone they worked for
recognition as having the "best fist." To send in a "best fist" nomination,
please address it via e-mail to <w2rs@amsat.org>, via packet radio to
W2RS @ WA2SNA or W2RS @ GB7HSN (whichever is closer to you), or via
"snail-mail" to W2RS' callbook address. Those nominated will be featured
in a bulletin sent to Amateur Radio publications and posted via ANS to
packet radio and the Internet in early February.

[Info via Ray Soifer, W2RS]

* MARS PATHFINDER NEWS *
==========
After operating on the surface of Mars three times longer than expected and
returning a tremendous amount of new information about the red planet, NASA's
Mars Pathfinder mission is winding down.

Flight operators at NASA's Jet Propulsion Laboratory, Pasadena, CA, made the
announcement November 4th after attempting to reestablish communications with
the spacecraft throughout October. With depletion of the spacecraft's main
battery and no success in contacting Mars Pathfinder via its main or secondary

transmitters, the flight team cannot command the spacecraft or the small rover named Sojourner that had been roving about the landing site and studying rocks.

At the time the last telemetry from the spacecraft was received, Pathfinder's lander had operated nearly three times its design lifetime of 30 days, and the Sojourner rover operated 12 times its design lifetime of seven days.

Since its landing on July 4, 1997, Mars Pathfinder has returned 2.6 billion bits of information, including more than 16,000 images from the lander and 550 images from the rover, as well as more than 15 chemical analyses of rocks and extensive data on winds and other weather factors. The only remaining objective was to complete the high-resolution 360-degree image of the landing site called the "Super Pan," of which 83 percent has already been received and is being processed. The last successful data transmission cycle from Pathfinder was completed at 3:23 a.m. Pacific Daylight Time on Sept. 27, which was Sol 83 of the mission.

The Mars Pathfinder team first began having communications problems with the spacecraft on Saturday, Sept. 27. After three days of attempting to reestablish contact, they were able to lock on to a carrier signal from the spacecraft's auxiliary transmitter on Oct. 1, which meant that the spacecraft was still operational. They locked on to the same carrier signal again on Oct. 6, but were not able to acquire data on the condition of the lander. At that time, the team surmised that the intermittent communications were most likely related to depletion of the spacecraft's battery and a drop in the spacecraft's operating temperatures due to the loss of the battery, which kept the lander functioning at warmer temperatures.

Although the true cause of the loss of lander communications may never be known, recent events are consistent with predictions made at the beginning of the extended mission in early August. When asked about the life expectancy of the lander, project team members predicted that the first thing that would fail on the lander would be the battery; this apparently happened after the last successful transmission September 27.

After that, the lander would begin getting colder at night and go through much deeper day-night thermal cycles. Eventually, the cold or the cycling would probably render the lander inoperable. It appears that this sequence of events has probably taken place. The health and status of the rover is also unknown, but since initiating its onboard backup operations plan two months ago, the rover is probably circling the vicinity of the lander, attempting to communicate with it.

The rover, which went into a contingency mode on Oct. 6, or Sol 92 of the mission, had completed an alpha proton X-ray spectrometer study of a rock nicknamed Chimp, to the left of the Rock Garden, when it was last heard from. The rover team had planned to send the rover on its longest journey yet -- a 50-meter (165-foot) clockwise stroll around the lander -- to perform a series of technology experiments and hazard avoidance exercises when the communications outage occurred. That excursion was never initiated once the rover's contingency software began operating.

Engineering milestones of the mission included demonstrating a new way of delivering a spacecraft to the surface of Mars by way of direct entry into the Martian atmosphere. In addition, Mars Pathfinder demonstrated for the first time the ability of engineers to deliver a semi-autonomous roving vehicle capable of conducting science experiments to the surface of another planet.

The Mars Pathfinder mission is managed by the Jet Propulsion Laboratory for NASA's Office of Space Science, Washington, DC. The mission is the second in the Discovery program of fast track, low-cost spacecraft with highly focused science goals. JPL is managed by the California Institute of Technology, Pasadena, CA.

Un fortunately, some people are afraid of freedom/responsability. Pirate
radio is a freedom of speech issue. I live in the 5TH larest media
market, with approx. 150 stations to select from. The stations are owned
by 5 corprations!!!! Not much selection, all stations sound the same.
Same country music, same rock music, same SYNDICATED talk show host, not
much to choose from. Out of 150 stations.I like the idea of local radio
activity, not some body with family problems in kansas, calling
Dr.Laura! Sad day when certian Americians put down the Idea of freedom ,
after all Who said resticting the airwaves is constitutoinal, I have a
freedom of speech, and a RIGHT to use it in any way, I should not need a
licence to use that right (By the way, licence = money) Thank you for
your time,responses encouraged, after all I would not want to infringe
on you freedom to speech, and I do not recomend puting down any ideas
opposed to mine.

Well my $0.02. I agree. I think that for one the FCC should be either reorganized or aboished to some extent. The I idea of goverment charging rediculous fees to give you the right of broadcasting is unconstitutional. Now I could see them regualting so you don't overpower the airwaves with overmodualtion, and carving out a channel in the airwaves for you to DX on, but the fees should be like $25 flat. That's it. But some of these fees or overwhelming.

Also I think that the conglomerates should have to give up the stranglehold on AM/FM/TV stations. In the DC/Baltimore metro area (where I used to live) 4 or 5 companies owned 95% of all the stations. Therefore making them "cookie cutter" stations of the same blandness. If it went back to it essentials, independently owend w/ REAL DJ's (not randomly computer generated tracks). I worked for 98.1 WJJR in Rutland, VT. I wanted to do a slow jam show to compete in the late nite market. They said no because the only "live show" was the morning show. Everything else was controlled by the computer. How lame. Their should be a law against it.

Oh well, I didn't mean to blabber on and on, but I just feel very strong about the subject. This is why I want to put up a Urban Contemporary station in my area (Champlain Valley of NY/VT) since there is no such format in the area. Maybee put a little spice into the blandness. But I don't want to pay hundreds and thousands of dollars getting a liscense.

Apparently, the Mir repeater, SAFEX, was on today, as i was able to hear my squelch tail on the 6-Dec-97 01:38-01:48Z pass in the California. I heard another station on, but could not copy, perhaps due to a bad location. (I operate mobile and have power line noise problems in my area.) I'll try the better Mir passes over CM87 in the next few days as long as it still seems to be on.

Just what do you think gives you that right? Another one of the current
generation that thinks everthing is "their right". Sorry, it dosen't
work that way, most things are not you right, but a privilege that must
be earned.

2973. DSP-232 With WiSP

Newsgroup: rec.radio.amateur.space
Date: 1997-12-07 00:00:00 UTC
From: burgedm@igs.net
Message-ID: <348a05e4.40259229@news.igs.net>
Source record: 17445

Does anyone know how to make an AEA DSP-232 (that's two three two) NOT DSP 2232 work with WiSP?

I'm using the latest version of WiSP available from the ftp site and I have installed the ROM's sent out just as AEA disappeared. The ROMs are labeled "V1.0 L31" and the TNC identifies itself with

Release 06.Nov.96
Ver 1.0b Lot 30

when it powers up.

I'd like to know just what TNC I'm supposed to select when configuring the satellites in WiSP. If I select any TNC other than PK-232 my TNC will not come out of KISS mode without remove battery power. If I set it to PK-232 and mode 14 it initializes to something, what I'm not sure 'cause it certainly isn't decoding anything. The indicator shows a P just like it should however the tuning LED goes out and does not reappear. However it will come out of KISS mode when I exit WiSP however it is set to Radio Port 2 and modem 18 (9600 K9NG).

If I use a terminal program to set it to modem 14 (1200 BPSK) it will receive and decode the Microsats. However if I've been in WiSP I need to send a reset command and then reinitialize the DSP-232 before I can receive any data.

Anybody have any ideas what's going on??

Thanks

Dave - VE3NNW

have earned that right. I bet they are for affirmative action, anti
Prop. 209, quota's giving away the earned previleges to those that did
not work for it.
I bet he voted for Senator Ted Kennedy.
Need I say more, this is what keep liberals in business,
Robbin Peter to Pay Paul, Take away my right that are earned,
and give them away free to someone that didn't work for them.

Hmm...

Shades of the Liberal Democrats.....

International Reply Coupon - In the UK they are available from all post
offices. It's a coupon you send which the person at the other end can
hand in to their post office in exchange for the necessary postage
stamps. Here they cost 60 pence - don't know how that translates
elsewhere.

Yeah,... so? Could just as easily point out that you're one of the
previous generations who thought less and less was "your right"
Thinking in "generational" terms (at least in the present) is pretty
damn stupid anyway.

WireHead Prime (wiredone@raccoon.com) wrote:
: Dave Booth wrote:
: > If you saw all the hate and discontent in the alt.radio.pirate against
: > the US gov you would understand why they are cracking down on you all.
:
: Ummmmm...since when is it illegal to hate or be discontented with the
: government? And in what way does hating the government or being discontented
: with it justify breaking down a guy's door, handcuffing him on the floor
: (pointing a gun at his pets and yelling, "freeze or I'll shoot" to be funny or
: something) and then taking away everything electronic that he owns?

It isn't illegal to be discontent with government, but the
government exists for its own gain, not for OUR benefit, therefore when we
are discontent, they have to move to stifle such unrest, THE VERY SAME WAY
THE KINGS OF OLD DID to put down dissention! We are living in a class
society, and the government is the RULING CLASS!

: And, if pirates are such evil criminals, why are they only RARELY charged
: with an actual crime? Most of the time their stuff gets taken under civil
: forfeiture laws but they never get tried in court for their alledged crimes.
: Sounds like they're guilty until proven innocent to me.

That's because it is NOT a crime to operate a radio transmitter
without a license. Stealing is a crime, murder is a crime, pirate radio
is merely a RULES VIOLATION!

: What's next? Maybe burn someone at the stake for having an 'evil eye'?
: Round up a bunch of minorities and put them in a camp?

That's what they are doing where I live Wirehead. A few years ago
a serial killer came into town and something like 9 black women were found
dead, laid out in various vacant lots and such. No investigation was
performed. I think you know why (predominantly white police force). The
state government here has started selling prisoners to out of state labor
camps, which is A VERY BAD SIGN! Before, it was less likely you would go
to prison because the prisons were overcrowded. Now with slave labor
camps, it is MORE LIKELY you will go to prison because the state gets a
big wad of cash for sending you there. NO incentive to be lenient at all!

: Do you have any idea how stupid you sound? You basically just said that
: people who oppose the government should be punished for it.

That's what he said. I can hear him marching in his jackboots
right now, hand held high, saying Heil Hitler! Death to all who are not

just like me! Death to all who don't THINK the way I do! Yea, I see it.

: You're completely out of your skull. Like I say, when the FCC pulls your
: allocations and auctions them off for commercial services don't come crying
: here. You won't get alot of sympathy.

They came for the Jews, but I did nothing for I wasn't a Jew.
Then they came for the handicapped, and I did nothing for I wasn't
handicapped, then they came for the minorities, then finally came for me!

> overwhelming.

WOW! $25 is dirt cheap compared to other licensing fees like tavern license fees are $500 per year in Wisconsin, ummm same with dictates of the local government here telling us we no longer can have a septic tank for sewer and we MUST connect to sewer...thus since the demands of the city of Muskego dictates to all the people living in the Lake 101.5 FM listening area have to pay on there own expense to connect to the city sewer system plus also pay for the $500 construction permits to dig a trench to run a pipe from the house to the road, etc....

lesse.... umm radio stations wanting to play music thus have to have a license with BMI/ASCAP, etc that's at least a minimum of $500 annually for each music company. Ummm... WOW! people have to pay through the noise for everything.

Where does all that money go???? apparently someone must be pocketing it.

If Class-D ever comes back, or some sort of licensing for micro-broadcasters (which is just a dream....there won't never be any licensing of low power radio anyways) I doubt a license will cost $25...more like $2500... but anyways if they ever change the laws to allow for low power "Microbroadcasting", transmitters like Panaxis, Veronicas, Ramseys, etc... will still be considered illegal to use because they're not FCC accepted type equipment. LPB, Inc. sells certified FCC type accepted Low Power transmitters, but they are not cheap at all.

If I could set up a Licensed Low Power radio station, I would then feel comfortable about advertising the station and sell commercial time on my station to cover the costs of licensing fees, equipment, etc... and make some money on the long run.

But, that's all a dream.... it won't happen.... FCC isn't gonna bow down to allowing microbroadcasting because I see from what I read in some of these messages in this newsgroup would not impress the FCC to allow issueing licenses to Low Power broadcasters.

"DavidC" <davidc@bit-net.com> wrote:
"we cannot long survive when selfishness prevails."

Quite the contrary. The trouble is that people are NOT acting selfishly - that is to say, they are not acting in their own interests.

When people act in their own interests ("selfishly"), they are typically seen to be generous, respectful, productive, and creative. It is when people act selflessly that morals decay, nationalistic aggression breaks out, and individual rights are expunged.

America is now a carnival of errors prompted principally by the toxin of greed and the blunder of selflessness. Greed can be seen to be a corruption of selfishness, in the final analysis quite contrary to self-interest.

Radio Meteor Observation Bulletin No. 52 December 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Barcelona, Spain (01 59' E, 41 21' N)
Frequency: 48.250 MHz
Transmitter location: most likely Czech television C2 C. Budejovica,
100 kW, horizontal polarisation.
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
Antenna: astronomical azimuth 215 deg (=NE), elevation 0 deg.
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (100 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT and
"Data Capture" software with 9 second/18 sampling interval to
store all the > 1.0 s signal increases.

| Nov 1997

Notes:
. ? probably affected by sporadic-E, direct reception
. Nov 16, 17 and 18: problems with the UPS, lost information.
During the Leonids of Nov 17, I was active in 144 MHz Meteor Scatter
between 08h00 to 12h00 UT. I had only 6 very long reflections about
2 to 6 minutes long, but NOT a single short reflection!
The stronger reflections were on: 07h00, 08h07, 08h20, 08h27 (lasting
4 minutes), 08h43, 09h25, 10h00 (3 min), 10h40, 11h00 (4 min)

Enric Fraile Algeciras

| Nov 1997 Nov 1997 Nov 1997

Notes:
. FFTDSP data processed and remarks by Werfried Kuneth:
Sporadic-E signatures where only seen for a very short period at 11h UT
on Nov. 17. Despite the location close to Udine (large city), the recording
is free of interference! Several meteor reflections appeared at the same
time in Austria and Italy.
Special thanks to Giorgio Bressan and Giovanni Sostero of AFAM for their
great support.

Giorgio Bressan and Giovanni Sostero / via Werfried Kuneth

Observer: Eisse Pieter (Peter) Bus
Location: Groningen, Netherlands (6 deg 33' E, 53 deg 13' N)
Frequency: 72.11 MHz
Transmitter Location: Wroclaw, Poland, 130 kW, Distance 740 km
Antenna: Yagi, 3 elements, geographical azimuth 106 deg (ESE),
elevation 13 deg
Receiver: Bearcat UBC 860 XLT Scanning Radio, sensitivity: 0.5 uV
Observation method: Listening and counting in 5-minute intervals.

Mean "sporadic" activity of long-duration reflections > 7 s
on 1997 November 2, 8, 9, 12 and 14 starting at UT:

4h 5h 6h 7h 8h 9h 10h 11h 12h 13h
---
3 3 2 2 2 2 2 2 1 1

On November 9, 12 and 14 only a part of the observation period is monitored:
Nov 9: 8-14h UT, Nov 12: 4-6h UT, Nov 14: 6-14h UT.

No long-duration (> 20 s) reflections monitored

Uncorrected counts of long-duration reflections > 7 s
during one hour starting at UT:

UT 15 Nov 16 Nov 17 Nov 18 Nov

5h - - 18 -
6 2 4 19 11
7 2 8 22 12
8 4 7 12 10
9 4 5 13 8
10 2 4 19 5
11 - - 16 -
12 - - 5 -
13 - - 4 -

Uncorrected counts of long-duration reflections > 20 s
during one hour starting at UT:

```
----------------------------------------
UT 15 Nov 16 Nov 17 Nov 18 Nov
----------------------------------------
5h - - 13 -
6 0 0 12 7
7 1 3 10 7
8 1 1 12 1
9 1 0 5 3
10 1 0 8 1
11 - - 6 -
12 - - 1 -
13 - - 1 -
----------------------------------------

Total reflection time of long-duration reflections > 20 s
in seconds during one hour starting at UT:

----------------------------------------
UT 15 Nov 16 Nov 17 Nov 18 Nov
----------------------------------------
5h - - 883 -
6 24 31 1062 638
7 29 436 1124 721
8 65 115 2532 215
9 161 49 678 306
10 47 29 904 65
11 - - 423 -
12 - - 116 -
13 - - 117 -
----------------------------------------

Notes:
. After correction for dead-time and observability function a maximum is
found between 10h30m and 11h15m UT at Solar Longitude 235.16 (2000.0).

For mid-point of the transmitter-receiver path counts:
radiant is rising on November 16 at about 21h30m UT
radiant is setting on November 17 at about 13h40m UT
Most favourable antenna-geometry for detecting Leonids between 5h45m and
7h30m UT.
Unfavourable antenna-geometry after 10h UT.
Very unfavourable antenna-geometry after 12h UT.

Peter Bus

--------------------------------------------------------------------------
Observer: Norman Davis
Location: Shingle Springs, California USA (120.57 W, 38.41 N)
Antenna: 3 element TV Yagi, Radio shack 10db preamp and antenna direction
east, elevation 40 deg.
Receiver: IC-7000 at 67.2499 MHz, USB Mode.
Transmitters: unknown TV channel 4 that could be anywhere between me and
New York.
```

Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. Sound card SB AWE-64. 20 channels of 2 Hz width
are used for meteor identification, pictures with interference or
sporadic-E propagation are manually rejected.

| Nov 1997 Nov 1997 Nov 1997

Notes:
. data reduced and remarks by Werfried Kuneth:
during the Leonids shower peak up to 5 TV video carriers showed up a few
100 Hz near each other. Only one TV video carrier was selected for
processing, this one was available for 24 hours. Sporadic-E or direct
reception appeared for 4 hours on Nov 18, after 17h UT, the Leonids peak
was without any sporadic-E signatures. Thanks to Norman Davis for sharing
the FFTDSP data with me.

Norman Davis / via Werfried Kuneth

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)

Notes:
. ? probably affected by sporadic-E, direct reception.
. local time = UT + 2 hours (summer hour) until Oct 25,
local time = UT + 1 hour (winter hour) from Oct 26 onwards.
. Orionids on Oct 24.
. strong Leonids activity between Nov 16-18.

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. no alpha Monocerotids (Nov 22)
. good Leonid activity between Nov 16-18, comparable to last year
. local time = UT + 1 hour
. little interference during the month of November 1997

Pierre De Groote

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 3 element Yagi, direction south, elevation 65 deg
Receiver: IC-706 at 53.76060 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km,
direction south 2) a 30 kW TV video carrier from Sicilia,
Italy, distance 900 km, south. Both transmitters are processed

within the same 40 Hz virtual receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record the audio signal. 20 channels of 2 Hz width are used for meteor identification, pictures with interference, sporadic-E, E-layer and FAI propagation are manually rejected.

All meteor counts below are corrected for a full hour observing time. If the recording duration is 20-40 minutes, a dot is shown after the value. Data for less than 20 minutes observing time are not shown here.

Counts of reflections longer than 6.5 seconds: assumed to be overdense.

Notes:
. blank value means either few or no data available, interference,
sporadic-E or FAI propagation, or offline.
. local time conversion: 1 hour ahead of UT (05h00 UTC is 06h00 local)

. Joint report of FFTDSP observers for the Leonids 1997:

A: Austria: Werfried Kuneth, 53.7600 MHz, transmitter in south direction.
B: Italy: Giorgio Bressan (AFAM, 48.24049 MHz, transmitter in NW direction
C: California: Norman Davis, 67.2499 MHz, transmitter direction east?

The data was processed by Werfried Kuneth. I received the recordings from
three different locations, all with a similar setup for a TV video carrier.

All observers used FFTDSP42 (by AF9Y) for recordings during the Leonids
peak on November 17, 1997.
All of these recordings have been inspected using the same manual procedure
to skip images with interference and non-meteor propagation modes, and the
same software to count the individual reflections.

Observatory C: used a different integration level (5), which gave a low number
of underdense reflections. Due to this integration level I found only one
duration level that matches all observatories (making them somewhat
comparable): A: and B: counts are of reflections longer than 13 seconds, and
C: counts longer than 16 seconds. Fortunately, this count displays the
Leonid peak very well:

| Nov 1997
```

There was no distinct peak visible, just the fireballs each hour.
Observatory C saw more, while there was a little bit more time between
meteors in Europe. Based upon these observations, the Leonids appeared as a
shower of very strong, long-duration meteor events, lasting for 14 (or more?)

hours, a population which is quite different to other meteor showers.

It is interesting that during the last 3 years it was shown that visual observers do not see this number of fireballs (over horizon?).
In contrast to the very bright "fireball" end of the spectrum, the Leonids seemed to show only little enhanced rates of "usual" meteors (positive magnitudes) and faint meteors (> mag 6) in the years 1995, 1996 and 1997. Detection of the Leonids was best with the radiant at more than 20 degrees elevation. No indication of reduced numbers of events occurred with the radiant overhead.

Special thanks to all who helped in this observation campaign.

Werfried Kuneth

Observer : Kimio Maegawa JA9BOH
Transmitter : HAM beacon (JA6YBR) (50 W Morse coded , 50.017 MHz) by Miyazaki-University Ham Club.
Antenna: 1 lambda crossed loop, Az Omni 20 m H
Location: Miyazaki city (131.43 E, 31.82 N) NE-SW path 650 km
Receiver : IC706mk2 with high stability quartz option.
Sensitivity: -150 dBm or lower, detect 3 dB galaxy noise variation
Antenna: 4 element Yagi (10 dBi) 2 m above the ground, 0 deg elev.
Location: Sugiyama Meteor Observatory, Japan (136.1E, 35.9N) 320 m ASL
Observing method:Automatic Duty Cycle measurement every minutes by Audimate software by Mr. Mallama of AMS above -125 dBm threshold.
[see RMOB9707 for an announcement about this software]

```

Notes:
. local time = JST = UT + 9 hours
. Leonids Peak seemed to occur at around 6h JST or 10h JST on Nov 18.
(21h UT on Nov 17, 01h UT on Nov 18) from my observation.
. long echoes were detected from Nov 16 to 19 between 6h JST and 12h JST.
. More information on HRO (Ham band Radio meteor Observation) is available at
http://www.tcp-ip.or.jp/~kaze/rmd.htm
http://www.fukui-nct/~kmaegawa
. Duty Cycle Graph can be found at
http://www.fukui-nct.ac.jp/~kmaegawa/hro/hro.html

Kimio Maegawa

Observer: John Meyer
Location: Van Andel Creation Research Center, Chino Valley, AZ, USA
(112 29' 50" W, 34 50' 50" N). Elevation 1347 m above sea level.
Frequencies: 88.5, 91.1 and 91.3 MHz for signal FM receivers;
87.9 MHz (currently an unused FM frequency) for noise FM receiver.
Transmitter locations: many possibilities including San Francisco (CA),
El Paso (TX), Carson City (NV) and Tijuana (Mexico).
Antenna: 6-element FM Yagi pointed East at 40 deg elevation.
Driven element 1.2 m above a 3.5 m square wire mash ground plane.
Antenna Amplifier: 10 dB, coax cable: 150 m of RG-8.
Receiver inputs: 10 dB pre-amplifier driving a 4-way splitter with outputs to
each receiver.
Receivers: Four OPTIMUS STA-800 FM receivers modified to 10 kHz band
width using IF amplifiers with 80 dB dynamic range signal
strength output voltages.
Data Acquisition: DATAQ type DI-190 2-channel module connected to computer
serial input port. 40 samples per second each channel.
Channel 1 is combined peak signal amplitudes from the three
signal receivers. Channel 2 is signal strength from noise
receiver. Data stored only when signal strength at antenna
exceeds -121 dBm. Storage continues for one second after signal
drops below -121 dBm. Interference rejection: data storage
inhibited if interference at noise receiver's frequency exceeds
-122 dBm at antenna. Inhibiting continues for three seconds after
noise level drops back below -122 dBm.
Data Reduction: currently semi-manual, plan to increase automation soon.
Data Format: Results are shown as total reflection time each hour,
expressed as a percentage. The actual number shows 10 times
this value. When no figure is shown, the equipment was either out
of service, or results could have contaminated by sporadic-E or

interference.

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omnidirectional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observer are listing for
Kimio Maegawa's 53.75 MHz beacon.

Receiver: IC575 (CW mode 500 Hz IF filter)
Antenna: 2 element Yagi, pointed to the zenith
Observing method: FFTDSP software,automatic data saving and manual count.

Notes:
-: lost counts because of high noise level or machine failure.
@: Hourly rate estimated by effective observation time less than 60 min.
n: Contamination due to interference.
e: Contamination due to sporadic E opening.
f: No data available due to TX failure or maintenance
JST = UT + 9 h

Hourly echoes over 10 dB SNR (about -135 dBm)

Observer: Chikara Shimoda
Location: Asahi, Nagano, Japan (137 51' E, 36 07' N)
Frequency: 81.4 MHz
Transmitter Location: FM-Japan 81.3 MHz, 10 kW, distance 180 km
Antenna: 5 element Yagi directed to the zenith.
Receiver: AM-FM Tuner (TRIO KT-1100)
Observing method: Meteor echoes output from center-tuning meter were
recorded on a pen-recorder chart.

Chikara Shimoda

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 87.360 MHz
Receiver: Salora SRP-22 modified, narrow band FM (B=15 kHz).
detected signal level >-122 dBm.
FM detection, no pulse noise rejection required.
Antenna: 2 element Yagi with 4 dBd gain to SW, azimuth 45 deg (SW)
Data sampling system: threshold triggering, sampling rate 64 ms.
Computer logs total hourly elapsed reflection time, number of
threshold crossings for the hour, the longest time the signal was
continuously above detection level for the hour.
Data stored in the Compact MS-Soft format. Software for viewing available
from FTP.FUNET.FI pub/ham/vhf-work/mssoft43.zip (420 K, new version!)
I have completed the facelift upgrade with the Compact MS-Soft and you may
now download the V5.0 software package from my homepage www.sci.fi/~oh5iy

Forward scatter observations of Leonids and sporadic meteors in
November 1997.

Raw counts of reflections (corrected for dead time) during one
hour intervals starting at:

| November 1997 | mean sporadic background
UT | 15 16 17 18 | during 1995 and 1996
----+---
00 | 65 57 | 81
01 | 59 | 86
02 | 75 | 90
03 | 61 | 92
04 | 74 | 93
05 | 88 | 92
06 | 89 | 88
07 | 78 | 85
08 | 52 61 72 53 | 80
09 | 43 56 47 59 | 73
10 | 40 37 51 43 | 67
11 | 45 | 60
12 | 42 | 52
13 | 31 | 46
| |
20 | 58 | 55
| |
22 | 55 68 | 68
23 | 68 62 | 75
----+---

Note:
. during the Leonids the sporadic rate is higher than the rate of the Leonids,
including the sporadics. This is caused by the loss of the weaker signals
during the Leonids.

Wim Zanstra / via Ton Schoenmaker

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio
meteor scatter observations and data reduction. It started in August 1993 in

order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

ISS CREWS NAMED

HR AMSAT NEWS SERVICE BULLETIN 341.01 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 07, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-341.01

NASA recently named the first team members to live and work aboard the International Space Station, and four crew members already hold ham tickets. In addition, several of the crew members are studying for their licenses.

The first crew will consist of American astronaut William M. Shepherd, as the expedition commander. Shepherd is currently studying for his ticket. He'll be accompanied by Russian cosmonauts Yuri Gidzenko and Sergei Krikalev, U5MIR. The crew is training for an early 1999 launch and a planned five-month mission on the ISS.

The second crew, headed by Russian cosmonaut Yuri Usachev, R3MIR, will include US astronauts Susan Helms, KC7NHZ, and James S. Voss, who's indicated an interest in getting his ham ticket.

No licensed hams are among the third crew, which will be headed by astronaut Kenneth Bowersox and will include Russian crewmates Vladimir Dezhurov and Mikahil Turin. Bowersox also has said he'd like to get his ham license.

Russian cosmonaut Yuri Onufrienko will head the fourth crew. US astronauts Carl Walz, KC5TIE, and Daniel Bursch will accompany him.

AMSAT-NA's VP of Manned Space, Frank Bauer, KA3HDO, reports that the international team developing the ISS ham radio station is now working hard to incorporate a transportable ham station for ISS, and deliver this equipment to the Johnson Space Center in Houston, Texas for flight certification in June, 1998. Initially, ISS crews will inhabit the service module, which will include a ham radio antenna, with ham gear scheduled to be delivered aboard the STS-96 shuttle flight. Microsat/repeater payloads are tentatively scheduled to arrive in early 2002, expanding ham radio capability aboard the station.

Stay tuned to ANS for more information on ham radio's planned presence on ISS as it develops.

[ANS thanks the ARRL, NASA and Frank Bauer, KA3HDO, for
this information]

SB SAT @ AMSAT $ANS-341.02
PHASE 3D UPDATE

HR AMSAT NEWS SERVICE BULLETIN 341.02 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 07, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-341.02

Phase 3D Project Leader Karl Meinzer, DJ4ZC, recently visited the Phase 3D Integration Lab in Orlando for a top-to-bottom review of Phase 3D's status. The Phase 3D satellite was to have been aboard the Ariane 502 flight October 30, but ESA's revision of launch environments, and the consequent structural modifications to the satellite's spaceframe made it impossible for Phase 3D to meet the 502 flight schedule.

According to AMSAT-NA President Bill Tynan, W3XO, the structural work is now essentially complete and the crew at the Orlando Lab are beginning to re-install electronic modules and other equipment which had to be removed so that the structural work could proceed. Following this tests will be conducted to confirm satisfactory interoperability of all of the Satellite's various sub-systems and then environmental testing will take place.

Tynan further stated that he doesn't expect any new information concerning a launch date and vehicle for Phase 3D until well after European space authorities determine the root cause of the early engine shutdown that took place on the recent Ariane 502 flight.

Keith Baker, KB1SF, AMSAT-NA's Executive Vice President noted that according to the original schedule, the next Ariane 5 vehicle (503) is due to lift off in May, 1998, for the final qualification flight of the Ariane 5 program. The first Ariane 5 commercial launch (L504) is currently planned for the second half of 1998.

[ANS thanks Karl Meinzer, DJ4ZC, Keith Baker, KB1SF, and Bill Tynan, W3XO,
for this information]

SB SAT @ AMSAT $ANS-341.03
DOVE QSL UPDATE

HR AMSAT NEWS SERVICE BULLETIN 341.03 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 07, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-341.03

Jim White, WD0E, reports strong requests for Dove (DO-17) QSL cards.
To receive a DOVE QSL, receiving stations need to send a request

indicating the date, time and frequency the satellite was received. Jim reports that it is not necessary to send a breakdown of the satellite telemetry or a printout of received data. Include a self addressed stamped envelope (SASE) or an addressed envelope with an International Reply Coupon (IRC) with your request. Reception reports should be sent to;

Dianne White N0IZO
45777 Rampart Road
Parker, Colorado 80138-4316
USA

Jim also notes that for those stations that would like to decode the DO-17 data, several programs are available to decode the telemetry from DOVE. Some shareware decoders can be found on Compuserve and America On Line. Also the decoder TLMDCII, which includes an extensive .DOC file of information about Microsat telemetry (including DOVE), is available from AMSAT-NA.

[ANS thanks Jim White, WD0E, for this update]

/EX

SB SAT @ AMSAT $ANS-341.04
KB5YSQ TO COMMAND SHUTTLE

HR AMSAT NEWS SERVICE BULLETIN 341.04 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 07, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-341.04

NASA has announced that astronaut Charles Precourt will command the final space shuttle/MIR docking mission scheduled for May of 1998. Precourt holds the amateur call KB5YSQ.

The May mission, designated as STS-91, will be aboard the shuttle Discovery. Precourt has visited the Russian space station twice before. NASA also announced that the flight crew will include Wendy Lawrence, KC5KII.

The May mission will retrieve US astronaut Andy Thomas, KD5CHF, from the MIR station. Thomas is scheduled to travel to MIR in January.

[ANS thanks NASA and the ARRL for this information]

SB SAT @ AMSAT $ANS-341.05
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 341.05 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 07, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-341.05

MIR
Dave Wolf has stated that powering up the radio is "On his
List" and it is hoped that Mir will be back on the air soon.

As part of ongoing frequency experiments to improve Amateur Radio operations on board MIR, and to better understand how these frequencies will be effective on the International Space Station, MIR will begin a 2-phase frequency experiment beginning December 1, 1997 and ending on May 31, 1997.

For phase 1, a 70cm/2m crosslink experiment will operate for a 3 month period from December 1, 1997 up to March 1, 1998.

On December 1, 1997 the MIR operating frequencies will change to:

Uplink: 437.850 MHz Downlink: 145.800 MHz

Phase 2 of this experiment will use a 2 meter-only set of uplink and downlink frequencies. This phase of the experiment will begin on March 1, 1998 and will also be of 3 months duration.
[ANS thanks the MIREX team for this information]

SAFEX, MIR 70cm Repeater (Uplink 435.750 MHz FM, Downlink 437.950 MHz FM, subaudible tone 141.3 Hz)
The SAFEX activity very intermittent.
[ANS thanks the MIREX team for this information]

RS-10
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)
Not operational at this time.

RS-12
(Uplink, 145.91-145.95 MHz CW/SSB, Downlink 29.41-29.45 MHz)
Operational, now in mode A.

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Operational.

RS-16
Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 and 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W

RS-17
Operational. 145.820 MHz
Sputnik RS-17 is still going strong. Its 250 mw beacon has been head around the world. Sputnik has a tentative life expectancy of 3-6 weeks on batteries. There are no solar panels on Sputnik. Since it was launched on

November 3, 1997, it is expected to last until the December time frame
(your actual mileage will vary). Attitude
Sputnik is now flying ahead and BELOW the Mir Space Station.

QSL Information is as follows:

Sergej Samburov (or) FR5KJ Radio Club
PO Box 73 College Jules Reydellet
Kaliningrad - 10 City 103 Rue de la Republique
Moscow Area 10470 97 489 Saint Denis Cedex
Russia Reunion Island , France
[ANS thanks the MIREX team for this information]

AO-10
(Uplink 435.030-435.18 MHz CW/LSB, Downlink 145.975-145.825 MHz
CW/USB)
Operational. Stacey Mills, W4SM, would appreciate any perigee
observations of AO-10's beacon or transponder during the next several
weeks until conditions begin to improve. If his orientation figures are
correct, AO-10 should be down to a solar angle of -84 degs with only 11%
illumination. Send reports to w4sm@amsat.org
[ANS thanks Stacey Mills, W4SM, for this report]

AO-27
(Uplink 145.85 MHz FM, Downlink 436.792 MHz FM)
Operational with lots of activity including QRP stations heard over
North America. The control ops have programmed AO-27 to start earlier in
its pass.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update]

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Operational. FO-20 in mode JA continuously.
[ANS thanks Kazu Sakamoto, JJ1WTK, for this report]

FO-29
Voice/CW Mode JA
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Digital Mode JD
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600
baud BPSK)
Operational. FO-29 was in JA mode on December 5th, 1997.
5 Dec. JA
12 Dec. 08:11z JD 9600
19 Dec. 08:49z Digi-talker

SB SAT @ AMSAT $ANS-341.06
WEEKLY SATELLITE REPORT PT 2

HR AMSAT NEWS SERVICE BULLETIN 341.06 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 07, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-341.06

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK)
KO-23 downlink efficiency is near zero percent.

Stacey Mills, W4SM, has estimated the keps show that KO-23 will not experience an eclipses again until December 12th. During the orbits of that day, eclipses rapidly increase in duration from 2 to 11 minutes. Eclipse length will then continue to increase, peaking at 35 minutes per orbit in the December 28th thru January 4th time period. Eclipse length will then begin slowly decreasing again. KO-23's download efficiency has dropped dramatically due to the increasing heat and its affects on the signal deviation.
[ANS thanks Stacey Mills, W4SM, and Jim Weisenberger, AA7KC,
for this report]
KO-25
(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM, 9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for this report]

OSCAR-11
(Downlink 145.825 MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz)
Operating normally. During the period of October 14th through November 16th this satellite has continued to provide good signals on its 145.826 MHz beacon.

The operating schedule is unchanged.
ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The mode-S beacon is ON, transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and delivering half power. This beacon is a useful test source for those testing mode-S converters, prior to the launch of P3-D. It is considerably weaker than DOVE, which should be used for initial testing. Any reports of

reception on 2401.00 MHz would be most welcome. Please e-mail reception reports to g3cwv@amsat.org.

The 435.025 MHz beacon is normally OFF. However it can sometimes be heard when the satellite is being commanded by ground control, (i.e. within range of Guildford, UK). When the 435 beacon is transmitting, the 145 beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit the G3CWV web site. It contains some software for capturing data, and decoding ASCII telemetry and the WOD survey. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded, as new data is captured.
The URL is - http://www.users.zetnet.co.uk/clivew/
[ANS thanks Clive Wallis, G3CWV, for this information]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86 MHz FM, 1200 bps Manchester FSK

UO-22
(Uplink: 145.900 or 145.975 MHz FM. Downlink 435.120 MHz FM
9600 Baud FSK)
UO-22 is operating normally.
Chris Jackson, G7UPN/ZL2TPO, has reloaded the Store and Forward
communications task on the UO-22 On-Board Computer. This task includes
incremental checksums which should make uploading slightly faster.
In the old task, once an upload was complete, the spacecraft had to
perform the checksum on the complete file. Depending on the file
length, this could take quite a long time. With the new task, the
checksum is computed on the fly - while the data is actually being
uploaded. Thus there is no need to recompile at the end of the
transfer and this checksum delay is then removed.
However, all files that were started before Chris loaded the task
will receive a corrupt body checksum error when the upload is completed.
If anyone gets persistent body checksum errors while uploading files to
UO-22 would they please let Chris Jackson know as soon as possible
[ANS thanks Chris Jackson, G7UPN/ZL2TPO, Ground station and
Operations Manager of UO-22, for this report]

IO-26 (ITAMSAT)
Uplink 145.875, 145.900, 145.925, 145.950 MHz FM, Downlink 435.822 MHz
SSB, 1200 Baud PSK)
IY2SAT-1>AMSAT <UI>:
12th November 1997
All sub-systems are OK.
Loading in progress.
Please don't tx on uplink. Stay tuned for further news!
Best wishes from the ITAMSAT team.
[ANS thanks Daniele, IK2XRO, and Piercarlo, IW2EGC,
ITMSAT Command Station for this report]

Well boo hoo.

White christian conservative men have had a pretty good run what with killing most of the native Americans, using slave labor for a couple hundred years, raping and pillaging the landscape, sucking up most of the money so only their white christian conservative sons can get even wealthier. Takes money to make money dontcha know.

At any rate, if all it took was hard work (IE earning) to become wealthy and powerful, why are there more white collar criminals than blue collar millionaires?

Wirehead

> Shades of the Liberal Democrats.....

Blah blah blah.

Liberal this democrat that. Earned this. Angry about that.

You're living on a few million square miles of land you didn't earn.
You're living off the fat of a couple hundred years of slave labor
that you didn't earn.
You're speaking freely due to rights that YOU didn't earn...but were
fought for by someone who didn't care if you were liberal or
conservative.

So pretty much...you've earned NOTHING that wasn't given to YOU by
someone else.

As for "liberals" (using the current definition of the term)...

Liberals didn't blow up a Federal building on Oklahoma City,
killing innocent women and children
Liberals didn't blow up and open fire at "abortion clinics"
at least attempting to murder innocent women, who may have been
there simply because they couldn't afford medical care or for

obstetric or other exams
Liberals didn't assassinate Abraham Lincoln, John F Kennedy,
Martin Luther King Jr or Malcolm X (Thou shalt not kill)
Charles Manson, Ted Bundy and countless other serial killers were
not Liberals
Liberals did not break into Democrat National HQ in order to
help Nixon illegally win a campaign
Liberals have fought right along with everyone else in every war
this country has ever fought
Liberals did not perpetrate a meaningless and unconstitutional
witch hunt against ALLEDGED communists, who under our constitution,
are guaranteed the right the hold whatever political or economic
views they choose anyway
The Heavensgate and other suicide cults were not Liberals

He who lives in a glass house should not throw stones. So before you
get that special feeling way down low by calling names, perhaps you
should look at your own worldview and the destruction and suffering it
has wrought, not to a few angry hams, but to MILLIONS all over the
globe.

What worries me is the "my due" attitude. Rights, OTOH, _are_ inherent
(i.e. "yours"). Exercising them, without paying a heavy price, _is_ a privilege.

In the courts, so far, the little guy has lost the Federal vs. State argument
with respect to low power transmission. Outside the courts, the little guy
has already won, due in part to cheap technology. I know of five <5 Watt FM
stations on my side of Indy. THEY co-ordinate frequencies (you know, like the
FCC allows amateur groups to co-ordinate repeaters).
The majority of ordinary people know about the station nearest to my QTH, and
even if they don't listen, by their group inaction to do anything about it,
have shown how they feel about what the Federal Courts believe. "They're not
hurting anybody, so who cares?"
For better or worse, that's the way this country works.

I am currently using a verticle dipole stuck on a side of tree very
much like a cell tower antenna but I am not very happy with it. For
HF, I have a full-wave 40 meter horizontal loop and I am still
astounded how quiet it is. So, my next 10 mtr downlink I think is
going to be a full-wave loop. The dimensions I believe are 16 feet
per side or 64 feet total length.

2993. NORAD Two-Line Orbital Element Sets (TLE107)

Newsgroup: rec.radio.amateur.space
Date: 1997-12-08 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <66i003$nj1$1@blackbird.afit.af.mil>
Source record: 17465

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

You don't know what you're talking about.
Your 'question' assumes that there are, but you give absolutely no
proof.

This was not just for pirate radio, but in general radio and television liscenses. Same with amature radio. Why shold someone wanting to talk on the amature band have to pay the FCC to be allowed to DX? I aknowlege that there should be limits to power, and most other FCC ruled to date, but why the cost? The FCC get's millions just from the government to operate, and get billions form amature and commercial radio and tv. I think it's just not right.
Anyways, I was just responding to a message, and it had multiple recipiants, including rec.radio.amateur. But i still stand in my beliefs.

John,

So you're saying that there are more blue collar millionaires than
white collar criminals???

Let's analyze, shall we?

Ok...how does one become a blue collar millionaire? Well, it's virtually
impossible through hard work alone. A person could probably acquire a
tidy savings but it'd take YEARS or even DECADES to do so. They could
invest their money but only a small percentage of the time would that
investment lead to wealth rather than no movement in net worth or financial
ruin.

One could inherit the money...but if there was that much money in the
family one would wonder why you'd be blue collar in the first place unless
it was a distant relative, in which case it'd be very unlikely you'd get any
significant portion of the estate...in either case, the chances of inheriting
a million bucks are very very slim.

The final two ways I can see for a blue collar worker to get a million bucks
are to win the lottery, which hardly constitutes EARNING the money as much as
it does just getting lucky (although I suppose they earned the investment
capital necessary to buy the tickets to win), or to file a legitimate or
phoney insurance claim of some sort, which itself hardly constitutes hard work.

I'm going to guestimate a bit but I think it'll be reasonable:

Odds of Any Particular Blue-Collar Worker Becoming a Blue-Collar Millionaire

Hard Work: nil
Inheritance: 1/[20(+/-10)] (and I'm being MORE than fair here)
Lottery: EXTREMELY Low Odds by definition
Insurance: 1/10 maybe or less

So basically, it's pretty darned hard to become a blue collar millionaire.

On the other hand, according to American corporations white collar crime is not only a HUGE problem but a GROWING problem. On Discovery last night on the Justice Files they were talking about just shoplifting, not technically a white collar crime mind you but still indicative. They said the average shoplifter steals $90 worth of merchandise while an internal thief steals $300 or more worth of merchandise. At one job I had, the managers were finally caught stealing hundreds of dollars and thousands of dollars worth of (food) merchandise. With S&L Scandals, fraudulant home equity loan schemes, embezzlement (at my current company the previous book-keeper made off with $20,000 or so, ended up in jail but we never saw the money again) and even (though I find it harder to believe than Conservatives just cry-babying over a Democrat getting elected President) the President is accused of white-collar crime, I find it difficult to understand (unless you are extremely mentally challenged, John) how you could believe that blue collar millionaires could outnumber white collar criminals.

The point being that hard work alone and "earning privileges" cannot account for millionaires. There are a very few who did it through hard work but most inherited their initial investment capital from rich daddy (they were never blue collar to begin with) or broke one or more laws (usually tax evasion at the very least) to get where they are. Or they did it through highly unethical circumstances though not technically illegal. Bill Gatus of Borg basically stole the design for MS-DOS from Digital Research (ever notice how much it looks like CP/M...I wonder why?) and then screwed over IBM in his rise to power. Just because IBM deserved it, maybe, doesn't make it right for Bill to have done it.

In either case, John, if all you're going to do is sit around and repeat the party line and protect the wealthy and the powerful with your words, then don't accuse me of having no proof. Especially, when what comes out of your keyboard is so absurd. Basically, this whole thread got started because, like the good Puritans, the greatest concern of hams is that somewhere somebody is having a good time and you MUST put a stop to it...unless, of course, they're officially licensed to be part of your little fraternal club. Do no-code techs have to carry around little paddles with their call-signs on them?

Face it. You don't give a damn what I say, no matter how well-reasoned it is. All you care about is proving me wrong because I'm not you. I, on the other hand, only care about making America more free and convincing you to stop trying to stop me.

I wouldn't trust your analysis if it was the last thing on earth.

> Ok...how does one become a blue collar millionaire? Well, it's virtually
> impossible through hard work alone.

I worked for one as an apartmnent manager. I grew up with his sons. He
worked for McDonnell Douglass and never rose higher than lead man (if
that isn't blue collar, I don't know what is). He and his family bought
and owned three apatrment buildings where I lived, he owned his
residence (in a well-to-do part of the town) and also another house and
apartment building.

He sold each of the three ten-unit apartment buildings, alone, for a
half million each, now,

IF THAT DOESN'T MAKE HIM A MILLIONAIRE, YOU'RE TOTALLY CLUELESS.

[totally clueless BS snipped]

> Face it. You don't give a damn what I say, no matter how well-reasoned it is.

I just received a page, and I consider that more important than the crap
you're saying.

I just proved you WRONG. Why, because you're wrong, that's all. Wrong reasoning. You're even afraid to come out and use your real name.

Good bye, Schmuck.

David, you will get nowhere trying to reason with this moron. He should
change his title to Dumbhead Prime. He is just one of the current
generation that crys and screams about his "rights" like he has a right
to everything he wants and dosen't think anyone should ever have to earn
a priviledge to do anything.

"Lou Paris, Jr." <LTParis@worldnet.att.net>
shared these priceless pearls of wisdom:

->Well my $0.02. I agree. I think that for one the FCC should be either
->reorganized or aboished to some extent. The I idea of goverment charging
->rediculous fees to give you the right of broadcasting is
unconstitutional.
->Now I could see them regualting so you don't overpower the airwaves with
->overmodualtion, and carving out a channel in the airwaves for you to DX
on,
->but the fees should be like $25 flat. That's it. But some of these fees
or
->overwhelming.

I'm certainly glad we didn't overspend our "fees" on your education.

Hello !
I just would like to know if MIR is still operative on packet.
Is the frequency still the same 145.800MHz ?
Is the speed 1200 Bauds ?
I have talked with an ham that has made contact with them but
it was a long time ago, that's why I'm asking.
Also, where can I find some keplerian data about the sattelites
and and MIR.

Wow! You really put me down. You proved the existence of a WHOLE blue collar millionaire. YOU ONLY HAVE TO DO THAT A FEW HUNDRED THOUSAND MORE TIMES TO OUTWEIGH THE NUMBER OF PROVEN WHITE COLLAR CRIMINALS IN THE MEDIA EVERY DAY!

Clearly you can neither read nor go much past what the 700 Club and your goose-stepping friends tell you to think. I could never reason with you however hard I tried. You don't think I'm wrong because I am. You think I'm wrong because you're threatened by anything and anyone that isn't JUST LIKE YOU.

You're nothing but a feckless Nazi with no courage. I'm hiding behind an alias? I'm on the Internet you dullard! I'm no harder to find than you are! That is if you can resolve your rectal cranial insertion long enough to have a little chat with a search engine.

You know...none of this thread would've happened if you hadn't had to just LEAP UP on your soapbox and inform people of your obviously superior knowledge that pirate radio is illegal, which it STILL ISN'T. It's still a violation of Federal Regulations which, in itself, is STILL NOT A CRIME unless such violations are willful and continued!

By the way, you know how the ARRL Handbook and other sources say to keep one hand in your pocket when you're working on a rig? That rule doesn't apply to you. Go right ahead and stick both of those self-satisfiers right into that rig. Electricity can't hurt you any more than your own stupidity, I guarantee it. Shock therapy might help you I suppose.

3007. **Free radio club publicity

Newsgroup: rec.radio.amateur.space
Date: 1997-12-11 00:00:00 UTC
From: n9vjg@aol.com
Message-ID: <19971211140500.JAA00868@ladder01.news.aol.com>
Source record: 17478

Dear radio hobby club volunteer:

FBOM Magazine Online, the interactive version of FBOM Magazine, is offering to post information about your non-profit radio club's hamfests, jamborees and other large radio hobby-related events free of charge on our web site http://n-lemma.com/FBOM/.

The only strings attatched are that your club is a non-profit organization and you can use some extra publicity.

These listings will be continously updated. As an added incentive for others to rely on the listings, we will contact you 2 weeks prior to your event and put a "Confirmed or not confirmed by FBOM" stamp on the listing.

Please send us information about your club's fundraising events as soon as possible. You can also use a form on the our web site. Simply click any references to "Hamfest listings."

For any questions, email the Publisher, Eric Bond, N9VJG n9vjg@n-lemma.com or the Webitor, Chuck Brown, N9UPO n9upo@n-lemma.com.

Feel free to spread the word to other radio hobby-related clubs and organizations--especially those who do not have internet access. Our mailing address:

FBOM
P.O. Box 7711
Westchester, IL 60154-7711

Thank you and 73s

Eric Bond, N9VJG W.C.
Janitor and Publisher
FBOM Magazine Online

Eric, N9VJG

WireHead Prime wrote:

> Wow! You really put me down.

I have you ever listened to yourself and tried to decide what age you are? You sound 13-ish/14-ish. We could care less that you are breaking the law as long as we don't pick up your reception. But if we ever do, you will have infringed on our rights, and at that moment you will reported and your expensive equipment, most likely confiscated. There will be no warning . . .

I would encourage you not to transmit, as is typical with extremist liberals that claim to have all the "fun" (especially those of a teenage vintage), we the middle class consisting of BOTH minorities and whites (wanted to make sure that fact was clear before you jump on top of your racial soap box again), have to pay the bill if the FCC has to send agents out to pay you a visit, and even more if you are sent to prison. Which again, is another infringement upon our rights. So before you go claiming your rights, you had better think about whose and what rights you are taking away in the process. Or are you so self righteous that you can decide what rights of ours you may infringe upon to satisfy your own desire to have "fun"? Remember, we (who are official amateurs) earned the right to transmit, you didn't . . .

Sincerely,

David Pearce

I am looking for the Schematic and parts list for the AEA ST-1 Satellite Tracker. Could someone scan a copy of just the above and E mail it to me at: bmessier@clinic.net
Actually I want to home-brew some kind of satellite tracker that can be used with Insta Track software etc.
Thanks in advance. Bill Messier (K1MNW)

3011. Re: Is MIR still Active ?

Newsgroup: rec.radio.amateur.space

From: John Mock <kd6pag@nospam.mocha.ecofe.com>
Message-ID: <4mlnxrrnai.fsf@spinner.ecofe.com>
Source record: 17383

I just would like to know if MIR is still operative on packet.
Is the frequency still the same 145.800MHz ?

I've intermittently heard packet, mostly on the late evening passes
PST (~0700Z) on 145.985 MHz, but i have no idea if they're listening
there or on 437.850 MHz as previously announced. I've not gotten
MIR/SAFEX to respond during the past several days, so i suspect that
the uplink may be 437.850 MHz or some similar frequency in the 70cm
space sub-band. Also note that Mir runs on Moscow time, and they may
only run packet when someone's awake (and in the past, it's been visa
versa).

Is the speed 1200 Bauds ?

I believe so. Someday, they may try 9600 thru SAFEX, but that's only
a previously described capability, not anything that's been mentioned
since the original equipment description.

I have talked with an ham that has made contact with them but
it was a long time ago, that's why I'm asking.
Also, where can I find some keplerian data about the sattelites
and MIR.

I've not heard voice from MIR since John was up there (i forget the call)
but others have described long contacts with the previous American on Mir.
I haven't heard much about the current resident. Maybe others can answer
both questions.

Well, if nothing else, perhaps I kept you folks busy for a few days so you'd have less time to run around with your little DF rigs seeking out 'evil pirates' and turning them in.

Maybe I am immature (BTW, I am quite middle class and nobody ever gave me ANYTHING) but I'll tell you what...you're certainly no better.

In fact, even if I'm totally wrong and misled...at least my heart's in the right place. At least I care about someone other than myself. At least I don't just sit around smugly telling everyone, "That's the way the world is...it sucks... and I'm going to make sure it sucks more for you than it does for me." You'd call me immature even if I weren't.

I've received ALOT of mail messages saying, "Yeah I agree with you but why are you bothering with those guys?" Frankly, they're right. And I've forced you to reveal what you truly are. You're so vile I don't even have a name for you.

So I'm going to prove that I'm the bigger man...and end this thread. You want the last word, here's your chance. You just go ahead and take out all your hatred and self-righteous feelings on me. You may say that I let it go on too long, but so did you. So you just lay into me with all that anger that you've got bottled up inside. Who knows? Maybe you'll get it out of your system enough that your wife, your children or that innocent (gay/lesbian/black/white/asian/buddhist/whatever) will be spared your rage for one evening.

I have the courage to do something you haven't done: Give you the last word.

I am unable to keep up with the frequent changes in frequency, operating
mode, and the repeater (is it safex?). Its not fun anymore.

They are experimenting with new freqs for the International space station.
For the next 3 months: UPLINK - 437.850 - DOWNLINK- 145.800.

John Blaha is KC5TZQ, I talked to him back in January. The crew has been
very busy lately and have NOT had time to get on the air. Also, they are
having trouble with an antenna as well.

BID: $SPC1215

=========
SpaceNews
=========

MONDAY DECEMBER 15, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* MIR NEWS *
============
On December 17/18, 1997 the mini-satellite INSPECTOR is scheduled to perform
several fly-arounds of MIR and PROGRESS. Live video will be made available
on the Internet.

Basically, INSPECTOR can be described as a free-flying, remote-controlled
video camera. It is an experimental testbed for servicing platforms designed
to support the construction of the future International Space Station.

More information is available on the World Wide Web at the following URL:

http://www.inspector.de/

* NEW TNC ON MIR *
==================
A new KAM dual mode packet radio terminal node controller (TNC) that was
recently sent to Mir from the MIREX team was tested on-board Mir last week.
The new TNC supports both 1200 as well as 9600 baud connections, and has a
message buffer size of 100 kilobytes -- substantially larger than that of
the PacComm TNC previously in use. 9600 baud communications will be
delayed until a suitable cable wired up and installed.

[Info via Dr. Dave Larsen, N6CO]

* PIONEER 10 NEWS *
===================
WASHINGTON (AP) -- A quarter-century after its launch, Pioneer 10 is still
helping astronomers explore the universe, but the little spacecraft is
slowly fading from radio contact and will be beyond the reach of even
the most sensitive antenna by Christmas next year.

"It will be kind of like losing an old friend," says John D. Anderson, a Jet Propulsion Laboratory scientist who helped build Pioneer 10.

Since its launch, six presidents have held office, wars have been fought and ended, the Soviet empire has crumbled, and astronauts who walked the moon have become old men. But Pioneer 10 is like that famous battery bunny -- it's still going.

Anderson, who watched Pioneer 10's launch in March 2, 1972, said the little spacecraft is now more than 6 billion miles from Earth, farther than any other machine ever. It is still streaking away at a speed of more than a half-million miles a day.

NASA scientists stopped sending instructions to Pioneer 10 earlier this year because its return signal was too weak to give clear data. The distance was so great that it took nine hours for a signal to reach the craft. But Anderson said Pioneer 10 can still send back a carrier wave, sort of a radio hum that lets the Earth know it's okay.

Anderson said NASA, using a 70-meter dish antenna designed for deep space communications, made the last contact on 30-Nov-97.

"It is still quite healthy," said Anderson. "It's just that the power source is so weak that you can't receive the data from scientific instruments."

All contact will be lost next year, he said, when the craft moves beyond the range of even the most sensitive equipment. The signal will fade and finally become undetectable.

"I've made a career of Pioneer 10 and will miss it," said Anderson. "It will be like losing something that you have a very personal attachment to. It's kind of like losing an old friend."

Pioneer 10 was launched as the first probe to Jupiter. After a close-up study of the giant planet, it was accelerated by the slingshot effect of Jupiter's gravity and gained enough speed to leave the solar system. Since then, it has moved past the orbits of Uranus, Neptune and Pluto, exited the solar system in 1983 and is now in what astronomers called the Kuipper Belt. To Pioneer 10, the sun is only a bright star.

A nuclear heater supplies power to Pioneer 10, and Anderson said the atomic element will continue to work for hundreds of years. In about 30,000 years, he said, the spacecraft will approach another star.

Anderson said the nation got "a bargain" from Pioneer 10's $100 million cost. It lasted far longer than expected and NASA has built up an extensive library of deep-space data from the craft.

"It will continue to benefit science for decades," he said. "All of that data has been archived and is available to anyone."

The Pioneer 10 data, he said, are enabling him and two other scientists to challenge the announced discovery of a planet that is said to orbit a pulsar star 1,200 light-years away.

Anderson said that by comparing the radio energy from the star and Pioneer 10, researchers found evidence that radiation from the sun was causing the radio waves to change slightly every 25 days. He said this change matched the rotation of the sun. This suggested that data interpreted by other researchers as evidence that a small planet orbited the distant pulsar may have been in error.

The electronic blip thought to represent a planet may, in fact, be caused by solar radiation, said Anderson.

Alexander Wolszczan of Pennsylvania State University, co-discover of that distant planet, said he still believes the planet is really there and that new studies will confirm that it is.

But he said he was delighted that Pioneer 10 was "still alive and doing well" and still helping out astronomers.

"It shows there is still some interesting science that can be done with Pioneer 10," said Wolszczan.

[Info via Paul Recer of the Associated Press]

* WEBERSAT-OSCAR-18 NEWS *
==========
Bob Argyle, KB7KCL reports that WEBERSAT-OSCAR-18 is gathering and sending Whole Orbit Data. The PHOTO task is being uploaded and the command team hopes to have pictures and spectra by about the 12th of December. WO-18's return to service is suspected to be seasonal in nature. Bob sends thanks to all those who have sent telemetry received from WO-18.

* FUJI-OSCAR-29 SCHEDULE *
==========
The following is the operating schedule for the FUJI-OSCAR-29 communication satellite:

12-Dec-97 at 08:11 UTC : Mode JD 9600
19-Dec-97 at 08:49 UTC : Digitalker
26-Dec-97 at 07:42 UTC : Mode JA
09-Jan-98 at 07:14 UTC : Mode JD 1200
16-Jan-98 at 07:52 UTC : Mode JD 9600
23-Jan-98 at 08:30 UTC : Mode JA
30-Jan-98 at 07:24 UTC : Mode JD 1200

[Info via Kazu Sakamoto, JJ1WTK]

* INTERNATIONAL SPACE STATION NEWS *
==========
NASA recently named the first team members to live and work aboard the International Space Station, and four crew members already hold amateur radio operator's licenses. In addition, several of the crew members are studying for their licenses.

The first crew will consist of American astronaut William M. Shepherd, as the expedition commander. Shepherd is currently studying for his license. He'll be accompanied by Russian cosmonauts Yuri Gidzenko and

Sergei Krikalev, U5MIR. The crew is training for an early 1999 launch and a planned five-month mission on the ISS.

The second crew, headed by Russian cosmonaut Yuri Usachev, R3MIR, will include US astronauts Susan Helms, KC7NHZ, and James S. Voss, who's indicated an interest in getting his ham license.

No licensed hams are among the third crew, which will be headed by astronaut Kenneth Bowersox and will include Russian crewmates Vladimir Dezhurov and Mikahil Turin. Bowersox also has said he'd like to get his ham license.

Russian cosmonaut Yuri Onufrienko will head the fourth crew. US astronauts Carl Walz, KC5TIE, and Daniel Bursch will accompany him.

AMSAT-NA's VP of Manned Space, Frank Bauer, KA3HDO, reports that the international team developing the ISS ham radio station is now working hard to incorporate a transportable ham station for ISS, and deliver this equipment to the Johnson Space Center in Houston, Texas for flight certification in June, 1998. Initially, ISS crews will inhabit the service module, which will include a ham radio antenna, with ham gear scheduled to be delivered aboard the STS-96 shuttle flight. Microsat/repeater payloads are tentatively scheduled to arrive in early 2002, expanding ham radio capability aboard the station.

[Info via the AMSAT News Service]

3025. Weather satellites - current activity

Newsgroup: rec.radio.amateur.space
Date: 1997-12-13 00:00:00 UTC
From: lawrenceh@peverell.demon.co.uk
Message-ID: <3493fa7e.16038805@news.demon.co.uk>
Source record: 17397

For those interested in the weather satellites (wwxsats) the following
are operational:

Polar orbiters:
NOAA-12 picture data on 137.50MHz and beacon on 136.77MHz.
NOAA-14 picture data on 137.62MHz and beacon on 137.77MHz.
Meteor 3-5 picture data in sunlight only on 137.85MHz.

Geostationary:
reception depends on longitude:
WEFAX transmissions on 1691.0MHz
Meteosat-6 (also WEFAX on 1694.5MHz)
Goes-8
Goes-9
GOMS
GMS
Fengyun-2 possibly.

Lawrence Harris

3026. REQUEST: looking for HI stations for sat qso

Newsgroup: rec.radio.amateur.space

Message-ID: <3492B928.7DDD@ridgenet.net>
Source record: 17398

I have worked Alaska on both FO-20 and FO-29, now I would
like to get Hawaii.
I notice that passes between the west coast and Hawaii
are usually devoid of activity on these satellites.
I know there must be some hawaiian hams with satellite
gear over there!
I would also be willing to give AO-27 a shot.
73, and hang loose :)

>Good, when are you going? Their loss will be our gain.

Maybe the Netherlands is freer in some respects. However, firearms laws
are much more restrictive. Example: A business associate from the
Netherlands was surprised at all the guns and ammunition sales around
here. He is a small-game hunter. He must store his gun at the police
station, sign it in and out, and if one of the clerical folks messes up on
the paperwork, he is held responsible, not the clerk who made the error.
Now, I do think the Dutch are much freer about sex, drugs, and rock 'n'
roll!

SB SAT @ AMSAT $ANS-348.01
26TH ANNUAL SKN ON OSCAR

HR AMSAT NEWS SERVICE BULLETIN 348.01 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 14, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-348.01

Amateur radio operators worldwide are cordially invited to join in the
26th annual Straight Key Night on OSCAR, sponsored by AMSAT-NA for
ham radio satellite enthusiasts.

According to Ray Soifer, W2RS, it's entirely unofficial with no rules, no
scoring and no need to send in a log. Just call CQ SKN in the CW passband
segment of any OSCAR satellite from 0000 to 2359 UTC on January 1,
1998, or answer a CQ SKN call from another station. OSCAR Zero (EME)
contacts count too.

Of course, all SKN operating must be done with a straight hand key.
Those participating are encouraged to nominate someone they
worked for recognition as having the "best fist." To send in a
"best fist" nomination, please send it to;

e-mail - w2rs@amsat.org

packet radio - W2RS @ WA2SNA or
W2RS @ GB7HSN

Regular mail can also be sent to the W2RS callbook address.
Those nominated will be featured in a bulletin sent to many of the
amateur radio publications and posted via ANS, packet radio and the
Internet in early February.

[ANS thanks Ray Soifer, W2RS, for this information]

SB SAT @ AMSAT $ANS-348.02
KC5VPF GETS EXTRA TIME ON MIR

HR AMSAT NEWS SERVICE BULLETIN 348.02 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 14, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-348.02

NASA has delayed next month's space shuttle flight to Mir, leaving
American astronaut David Wolf, KC5VPF, aboard the space station for

at least another few days. The shuttle Endeavour was supposed to blast off January 15, but NASA announced December 8 that January 20 will be the new launch date.

Wolf, who's been on Mir since late September, learned of the delay last weekend. The delay will give the Russian crew time to do additional work on Mir, including three spacewalks and the arrival of another supply ship. NASA also wants to check out problems discovered on the shuttle Columbia which returned to Earth last week after a two-week mission. Also, one of Endeavour's cargo bay doors accidentally was dented last week.

During the January mission, the Endeavour will pick up Wolf and drop off his replacement, Andy Thomas, KD5CHF. Thomas will be the last US astronaut to live aboard Mir.

[ANS thanks the ARRL for the bulletin.]

/EX

SB SAT @ AMSAT $ANS-348.03
HAM SATELLITE FREQUENCIES OK AT WRC '97

HR AMSAT NEWS SERVICE BULLETIN 348.03 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 14, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-348.03

Frequency allocations used in amateur radio satellite communications fared well at the now concluded World Radio Conference (WRC 97) held in Geneva, Switzerland.

WRC 97 delegates did agree to upgrade the Earth Exploration Satellite Service from secondary to primary at 1215 to 1300 MHz, which should have only minimal impact on amateur use of 1240-1300 MHz. The presence of these satellites reduces the possibility that other, less-compatible services might later be introduced into this band.

In other allocation decisions, amateur satellite segments were not included among allocations for wind profiler radars. Except for a worldwide primary allocation at 1270 to 1295 MHz, the only specific allocations for wind profiler radars are in Region 1, and those are on a secondary basis.

Region 2 administrations were urged to implement wind profilers in radio location bands at 440 to 450 MHz, 904 to 928 MHz, 1270 to 1295 MHz and 1300 to 1375 MHz, while protecting amateur satellite and weak-signal operations. The delegates also agreed that the frequencies between 420 to 435 MHz or 438 to 440 MHz could be considered for use in situations where there was incompatibility between wind profiler radars and other radio applications. In this case, too, the amateur-satellite segment is protected.

For an in depth report on WRC 97, visit the ARRL's website at: www.arrl.org

[ANS thanks the ARRL and Amateur Radio Newsline for this information]

SB SAT @ AMSAT $ANS-348.04
PLYMOUTH BALLOON LAUNCH SUCCESSFUL

HR AMSAT NEWS SERVICE BULLETIN 348.04 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 14, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-348.04

Hank Riley, N1LTV, balloon launch Technical Director for PCIS-1,
a small, high altitude balloon with a tiny expendable 2 meter CW beacon
aboard, reports the balloon was launched December 9, 1997
under near perfect sky and wind conditions.

Winds were very light and Hank says the balloon rose gently almost
straight up and then off to the north. Optical contact (without even
binoculars for aid) was maintained for almost 20 minutes.

The beacon signal was picked up by N1LTV (at 24 statute miles distant)
within just minutes of launch using only a 2 meter FM handheld and a
four element beam. At 15 minutes into the flight, Hank was able to copy
the beacon with a rubber duck antenna attached to the HT.

N1LTV is awaiting QSL reports. Several trackers have signal records
covering well over an hour of beacon transmissions. Hank also reminds
stations that it's also quite valuable to hear from those stations who
attempted to copy the balloon and did not. This will aid in the effort
to understand signal conditions during the flight.

An SASE if required if you'd like a Balloon QSL card. N1LTV asks
stations to include information about your receiving and antenna
equipment, as it will be useful for the post-flight analysis. Hank reports
his callbook address should be used for all QSL requests.

[ANS thanks Hank Riley, N1LTV for this information]

SB SAT @ AMSAT $ANS-348.05
T49C NEWS

HR AMSAT NEWS SERVICE BULLETIN 348.05 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 14, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-348.05

Mike, N1JEZ, reports that if you were fortunate enough to work T49C via
satellite last November, you should check out their Web site at:

http://sk7do.te.hik.se/clubs/sk0ux/T48RCT.html

There is an "electronic" QSL server online. Search for your call. When
it comes up, select it and download a .PS file (Postscript). Send this to

your printer and you will have a QSL card. The satellite contacts made by T49C were in addition to the over 8,000 HF contacts the DXpedition made from the rare Cuban grid square (FL 11) during the CQ WW CW contest.

[ANS thanks Goran, SM0DRD, and Mike, N1JEZ for this information]

MIR
As part of ongoing frequency experiments to improve Amateur Radio operations on board MIR, and to better understand how these frequencies will be effective on the International Space Station, MIR will begin a 2-phase frequency experiment beginning December 1, 1997 and ending on May 31, 1997.

For phase 1, a 70cm/2m crosslink experiment will operate for a 3 month period from December 1, 1997 up to March 1, 1998.

On December 1, 1997 the MIR operating frequencies will change to:

Uplink: 437.850 MHz Downlink: 145.800 MHz

Phase 2 of this experiment will use a 2 meter-only set of uplink and downlink frequencies. This phase of the experiment will begin on March 1, 1998 and will also be of 3 months duration.
[ANS thanks the MIREX team for this information]

SAFEX, MIR 70cm Repeater (Uplink 435.750 MHz FM, Downlink 437.950 MHz FM, subaudible tone 141.3 Hz)
The SAFEX activity very intermittent.
[ANS thanks the MIREX team for this information]

RS-12
(Uplink, 145.91-145.95 MHz CW/SSB, Downlink 29.41-29.45 MHz)
Operational, now in mode A.

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Operational.

RS-16
At this time only the beacons are on.
Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 and 29.451 MHz

Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W

RS-17
Operational. 145.820 MHz
Sputnik RS-17 is still going strong. Its 100 mw beacon has been head around the world. Sputnik has a tentative life expectancy of 3-6 weeks on batteries. There are no solar panels on Sputnik. Since it was launched on November 3, 1997, it is expected to last until the December time frame Attitude Sputnik is now flying ahead and BELOW the Mir Space Station.

(Downlink 145.825 MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz)
Operating normally.

The operating schedule is unchanged.
ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

The mode-S beacon is ON, transmitting an unmodulated carrier, but
telemetry indicates that it has partially failed, and delivering half
power. This beacon is a useful test source for those testing mode-S
converters, prior to the launch of P3-D. It is considerably weaker
than DOVE, which should be used for initial testing. Any reports of
reception on 2401.00 MHz would be most welcome. Please e-mail reception
reports to g3cwv@amsat.org.

The 435.025 MHz beacon is normally OFF. However it can sometimes be
heard when the satellite is being commanded by ground control, (i.e.

within range of Guildford, UK). When the 435 beacon is transmitting,
the 145 beacon is normally OFF. The data transmitted is mainly
binary.

OSCAR-11 users are welcome to visit the G3CWV web site. It contains
some software for capturing data, and decoding ASCII telemetry and the
WOD survey. There is an archive of raw data (mainly WOD) for analysis,
which is continually being expanded, as new data is captured.
The URL is - http://www.users.zetnet.co.uk/clivew/
[ANS thanks Clive Wallis, G3CWV, for this information]

3029. radio signal from apollo hardware ?

Newsgroup: rec.radio.amateur.space
Date: 1997-12-14 00:00:00 UTC
From: Denis Perron <denis.perron@cegepat.qc.ca>
Message-ID: <EL5q9u.HuL@data-io.com>
Source record: 17401

Hello. My name is Denis. I have an interesting question (i think).

Is it still possible to hear radio signal sent from equipment left on the moon by members of apollo mission . (or signal sent from the moon from russian lunar program).
I know appollo 11 crew left a seismometer on the moon. Was it transmiiting a radio signal (is it still transmitting, on which frequency ?). etc...

thanks for info

Denis

REPLY...

Actually, a radio like was described in the original message ("a low power transmitter which is able to cover a radius of 300 ft"), is not illegal, or a violation of FCC regulations.

In fact, you can buy a device like this in almost any toy store (wireless microphones for broadcast to FM radio receivers). And, with the right antenna, one of these can easily achieve a range greater than 300 feet.

If you want something more sophisticated, try the professional wireless microphones designed for musicians. Some of these use the FM radio frequencies (or can if tuned slightly), and some even offer stereo output (again a better antenna would increase range).

You might also want to get a catalog from Ramsey Electronics (716-924-4560). They offer several low-power radio kits (AM, FM, and FM stereo).

I couldn't agree more. The $150 (used) 2mFM HT is nice, but a $25 kit that
teaches some theory (as opposed to paraphrasing it in HAM-SPEAK) would
breath some life into this hobby.

Somebody sent me a schematic for a simple low power broadcast FM transmitter.
It's so elegent. Two 2222As. I put it into SPICE and have been testing it,
with the idea of altering it for 6 or 2 meters. In the process, I'll learn
more about SPICE _and_ controlling the deviation in FM.

So following this thread hasn't been totally useless.

I am interested in building something to keep tabs on my irish setter when I go camping. A friend of mine knows people that compete in fox hunts and have a commercial system. These systems cost anywhere from $600 to $1000. Does any one have plans to build a transmitter that would be compact enough to go around a dogs neck and yet strong enough to send a signal a couple miles.
PS. I guess it should be water proof?

I don't think that I can stand any more of this rampant idiocy. This poor kid wants to know how to build a low power FM transmitter, and we bombard him/her with legalese and empty threats. What we, as a community of professional amateurs, are passing up is the opportunity to encourage a young (and obviously intelligent) mind to do some scientific and independent thinking.

The design and implementation of a low cost, low power FM broadcast-band transmitter (an undertaking that CAN be kept inside the letter of the law, by the way) is not a simple task... this has been made quite obvious by the number of replies that avoid the question altogether. I have a feeling that amateur radio has (d)evolved from a knowledge base to a toy parade... this feeling is reinforced everytime I go to a hamfest and see twenty gadget booths for every one book booth. By the way, if anyone here knows of a good, technical newsgroup that isn't a glorified swap shop, please let me know. Does anyone even open up the cases on their radios anymore(other than to scrawl their name/call on the inside)?

As for the young man/lady who wanted information on the FM transmitter, please don't be discouraged by those here who would waggle their callsigns so piously in your face. By the time that you complete your project, your working knowledge of RF electronics will greatly overshadow most of theirs. Plenty of them didn't work as hard as they say they did to earn the *privilege* of transmitting (NOT broadcasting)... the book is $14.95 at Radio Shack and can be memorized in a matter of weeks. I wouldn't usually be so hard on the hams (I'm one too...), but the callous attitude they have displayed as of late makes me a little angry.

A good friend of the family got his start in radio broadcasting with a pirate rig that he built himself and ran from his basement when he was just an 8th grader in my parent's sunday school class. A local radio station scooped him up soon afterward, and now he is a *very* successful regional operations manager for a large broadcasting company.

If you would like more info on building a LEGAL fm transmitter, go ahead and e-mail me. If you want to tell me how much Amsterdam sucks because you have to keep your gun at the police station and read all the paperwork, keep it to yourself. And if you think that someone counts as a blue collar millionaire because he owns property, do *NOT* admit it to the world. That blue collar millionaire could quit that blue collar job and still be a millionaire, you idiot.

To anyone who shares my admittedly liberal opinion, I apologize for any generalizations I may have issued.

The entire MAR-X family were designed as "gain blocks" and as such
were not intended for use as pre-amps. They tend to be very noisy
and quite hard to match well. Any good single transistor will
outperform a MAR anyday, however only over a limited frequency range.
The MAR devices "work" over a wide frequency range, but not very well
at any single frequency.

This is true. As an experiment I built a single MMIC broadband amp.
I also built the Ramsey broadband amp that uses an MOSFET.
No tuned circuits were used in front of these.
The plans for each claimed 50 Ohms input and 50 Ohms output.
Each amp was connected to a RS-2004 scanner with s-meter and a discone
antenna.
The MosFet amp out preformed the MMIC amp about 2:1 over a wide range
of freqs.
Then I connected the MOSFET ahead of the MMIC amp with just a bnc male/
male connector. The S-meter read just a tad higher than with just the
MosFet by its self.
I know this was a crude test, not accurate at all, but I was looking
at end results.
Result: I use the MOSFET amp in front of the scanner for WX sat rec.
And I put the MMIC amp in service with my spectrum analyzer to give it
a boost.
Any thing written by Al Ward WB5LUA such as articles in QST May '89
and an article by Bill Owen Sept. '88 might be helpful.
I have both, would be glad to scan them and e-mail you BMG format.

Terry,

Try the ERA series of amplifiers, also available from Mini-Circuits.
I think you'll find something that will go to well past 2 GHz with
fairly reasonable performance. They don't have flat gain but they have
moderate noise figure, are easy to use and pretty inexpensive.

My two cents worth! Simply go to "Best Buy", purchace a simple
FM stereo transmitter that is intended for use with a CD player to
tramsmit into your own car radio. These cost $20-30, and are simple
and cheap enough for anyone. Now learn more about it, and educate
yourself by solving the problems you encounter.

The advice from the posting above is sound. Always listen to cool-
headed reasoning IF any is offered. And go ahead and work on getting
your Amateur radio Operators License. With an inquiring mind and the
willingness to experiment, you can not help but acquire knowledge that
will bring you to the forefront of any field you wish to pursue.

Good Luck@

The MAR series does have a noise figure which is too high for preamp use, but they aren't hard to match at all. They are 50 ohms in and out over their working range. They're stable too, if presented with 50 ohm terminations. Some in the series are unconditionally stable. That makes them useful for *following* a preamp stage which may be termination sensitive.

Unfortunately, the transmitters left behind by Apollo were commanded off as
a "budget cutting" measure over a decade ago, IE Uncle Fed didn't want to pay
anyone to monitor them anymore. The commands given shut them down completely,
both transmitters and receivers, so they can't be commanded back on either.
Bummer.

I don't know the story on the Russian landers, but none of them are currently
transmitting either.

One reason for shutting them down completely was so that they couldn't
interfere with other spacecraft signals if the transmitters started to drift
or otherwise misbehave. But since we've abandoned the Moon for the last
quarter century, that hardly seems an issue. The laser retroreflectors still
work of course. They are passive devices. If you have a good laser and
a good telescope, you might be able to see returns from them.

Gavin,

I'm actually looking for a preamp for about 1530 MHz to use with a 4ft dish. I can build circuits and use a soldering iron no sweat but I dont exactly have a professorship in electronic design so I assumed that the MAR 6/8 IC might be the man. If you say that a transistor circuit would be better then thats great and thanks a lot. So now I have a better idea of what I need so If anybody can help with a circuit ......

Regards to all for Christmas and New Year

Terry Gaff Dublin, Ireland.

PS - Thanks to all who replied.

3044. tnc that decodes DGPS?

Message-ID: <674fac$8u9$1@blackbird.afit.af.mil>
Source record: 17418

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

3048. Re: mars6 preamp

Newsgroup: rec.radio.amateur.space
Date: 1997-12-16 00:00:00 UTC
From: winton bell <w.bell@psyc.canterbury.ac.nz>
Message-ID: <3495F176.6484@psyc.canterbury.ac.nz>
Source record: 17420

Hi Gavin,

I would like to check on preamps construction with you.
I have 435Mhz and 145Mhz preamps to make with switching for protection
and control.
73 Winton.

3049. Re: tnc that decodes DGPS?

To my knowledge, no one presently makes a TNC to handle RTCM 104. The main problem is the need to take the serial bits in groups of six, order reverse the bits and then add the two bit tag. However, TAPR is actively working on an adapter but does not have an expected shipping date.

The Proceedings of the Central States VHF Conference (available
from ARRL) documents a large number of very good preamp designs.
There are several volumes of the Proceedings, perhaps someone at
ARRL can give you an index so you can determine which volume(s)
are of interest. (IMHO they are all of interest in one way or another to
anyone building circuits at VHF and above.) This info will enable you
to build a suitable preamp for your application.

Item #1
Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #2
Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #3
Hello All;
I'm selling a "like new - used 9 times" Mirage B 1016G [made
by KLM not by MFJ] Pre-amplified 10w-in 160-170w-out 2mtr
amplifier with all orignal boxes & docs.
Worked the "Sats" with this amp & has super preamp. Reason
for sale is strictly financial. I am asking $270 + shipping OBO.
Sorry No CODs...
Please re: me via email: n2rif@amsat.org Or Packet
N2RIF@K2UL.NJ.USA.NOAM. You can also try
calling but my phone is usally busy. My ph# is 609-386-9382..
Thank you for reading my bulletin. Thomas J or just T.j. -73

3058. Getting started in amateur SATCOM?

Newsgroup: rec.radio.amateur.space
Date: 1997-12-18 00:00:00 UTC
From: Illusions <illusions@*NOSPAM*enterprise.net>
Message-ID: <67apnfnuo1@news.enterprise.net>
Source record: 17429

Hello,
I am wondering if anyone can tell me what it takes to get started in amateur satellite/wideband communications. My goal is to build both a SATCOM receiving station and rig up sort of a short range microwave shot. Also, I'd like to fabricate what I can myself both for learning purposes and to cut down on costs. Specifically, I guess I'd need a dish, receiver and computer interface and software with which I can analyze, etc. the signals I receive. I suppose I'll need an FAQ or good book on building an antenna and some sort of LNA/LNB, info on what receivers are good to buy and info on purchasing computer software. If someone can point me to this info I will be most grateful.

Thank you
Brandon Wheaton

3059. Re: Getting started in amateur SATCOM?

Newsgroup: rec.radio.amateur.space

Source record: 17430

Brandon...read the latest issue of QST magazine....you can start out with a dual band handheld...a whip antenna...and a good
schedule. With this set-up you can work AO27 as a repeater...MIR....and the astronauts on the MIR. As the article points out
the dual band needs to cover the 430 freqs which many of them don't as they are on the "USA repeater freqs" of 440.

There are several "hand held" dual band antennas that are fun to build and use also.

I am just getting started in this area of ham radio myself...and am now working on a base station but I have antenna limitations.
Again...the mistake that I made to start with was buying a rig with only 440 to 450 capabilities on the 70cm band when I
needed 430 to 440.

=========

MONDAY DECEMBER 22, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* OSCAR-11 NEWS *
=================
During the period 16-Nov-97 to 15-Dec-97, UoSAT-OSCAR-11 has continued to
provide good signals on its 145.826 MHz beacon, although some interference
has occured from DOVE and Sputnik-40, which also transmit near this frequency.

Two reports have been received about the Mode-S beacon. Carl, WA7PIB reports
reception at levels 3-4 S units above the noise, compard with DOVE's 8-9.
A station in Sweden also reports the beacon at 8 dB above the noise.

Satellite telemetry continues to be nominal. Internal temperatures have
continued to fall, and at the present time are 8.8C and 6.4C for battery
and telemetry electronics respectively. This fall in temperature is due
to increasing in solar eclipse times, which are expected to reach a
maximum in early February.

Two WOD surveys have been transmitted during the reporting period. Both
are of Channels 10, 20, 30, 40 (+Y, -X, +X array currents, array voltage).
The previous WOD dated 29-Oct-97 continued until it was replaced by a
survey dated 14-Dec-97. These show the effect of solar eclipses on
array currents and voltage.

The new format AMSAT-UK bulletin, No. 114 is now being transmitted by the
spacecraft. It contains details of amateur satellite frequencies and modes
of operation. It may be changed at monthly intervals.

The operating schedule remains unchanged:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)

ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The Mode-S beacon is ON transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and is delivering only half power. This beacon is a useful test source for those testing Mode-S converters prior to the launch of P3-D. It is considerably weaker than DOVE, which should be used for initial testing. Reports of reception of the 2401 MHz Mode-S beacon would be most welcome, and should be directed to Clive Wallis at : g3cwv@amsat.org.

The 435.025 MHz beacon is normally OFF. However, it can sometimes be heard when the satellite is being commanded by ground control (ie. within range of Guildford, UK). When the 435 MHz UHF beacon is transmitting, the 145 MHz VHF beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit an OSCAR-11 web site created by Clive Wallis, G3CWV. It contains some software for capturing data and decoding ASCII telemetry and WOD. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded as new data is captured. The URL is:

http://www.users.zetnet.co.uk/clivew/

[Info via Clive Wallis, G3CWV]

* NEW SPUTNIK-40 QSL ADDRESS *
==============================
A change has been made to a previously published QSL address for the Sputnik-40/RS-17 satellite. The revised address is as follows:

Sergej Samburov
PO Box 73
Korolev-10 City
Moscow Area, 141070, Russia

Note that the zip code and the city name have changed. Envelopes sent to this address should be well sealed, not include cash or display amateur radio callsigns. A self-addressed envelope and an IRC or two should be included with your reception report to insure a QSL card will be returned.

[Info via Miles Mann, WF1F]

* MIR NEWS *
============
The Mir space station is currently making visible passes just after sunset along the east coast of the US. These passes will continue for the first part of the week. The next opportunity to witness visible passes of Mir in the evening sky will not occur again until the last few days of January 1998. The next US Space Shuttle mission is expected to dock with Mir around that time, so it may be possible to witness both Mir and the Space Shuttle

in the evening sky in late January.

The Mir crews have two space walks planned shortly. The first walk is expected around 29-Dec-97, and the second approximately 10 days later.

Reports of Mir being active on packet radio (145.985 MHz) continue to be received. It is not clear when or if the latest Mir frequency experiment, which was planned to begin on 01-Dec-97, will ever come about.

* AMSAT-UK CALL FOR PAPERS *
============================
The thirteenth AMSAT-UK Colloquium will be held at Surrey University, Guildford, Surrey, U.K., from Friday 31-Jul-98 to Sunday 02-Aug-98. Next year's event will include technical and operational matters as well as an IARU forum.

AMSAT-UK invites authors to submit papers about amateur radio space and associated activities for this event, and for the "Proceedings" document which will be published at the same time. Colloquium organizers normally prefer authors to present the papers themselves rather than having someone else read them in the authors' absence, but also welcome "unpresented" papers for the document.

Offers of Papers should be submitted as soon as possible; the final date for full documents is mid-June 1998 in order that the "Proceedings" document be available to participants. A second and final call for papers will issue about March 1998, probably at the same time as Colloquium booking information becomes available.

Submissions should be sent to Richard W. L. Limebear, G3RWL via the following routes:

Internet e-mail: g3rwl@amsat.org
Packet Radio: G3RWL @ GB7HSN.#32.GBR.EU
Satellite: AO16/19/22/23/25

Terrestrial mail: Richard W. L. Limebear, G3RWL
60 Willow Road
Enfield EN1 3NQ
United Kingdom

AMSAT-UK also invites anyone with requests for Program Topics to submit them as soon as possible to G3RWL.

I placing this information because I am looking for people who want their hobby to be their job.....like me. I will be moving to Phoenix soon to build out and run a good sized PCS network in that area (Tucson included). My company will be looking for technicians (both switch and field types) to operate and maintain this extensive network on an on-going basis. If you have cellular and/or PCS operating experience or even a phone company technical background that will be a big plus. UNIX programming and or operating backgrounds would also be considered in lieu of the previous qualifications. The job is full time and will commence around April/May Timeframe...this is a great opportunity to get in before the pack. If your interested please fax me a resume at 808-5931610 (referencing Phoenix positions) or send it in either text or MS Word format to the email address above.

I kid you not,,, this is a fun job and its lots of hard work at the beginning.....no wimps please!!! 73's mike N6GOZ

RS-10 has been dead for some time. RS-12 as of late has been operating
in mode A (144 up, 28 dn) for some time. RS-12 operates on slightly
different frequencies than did RS-10. Give it a try.

SILVER SPRING, MD, DECEMBER 21, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-355.02

Dee Interdonato, NB2F, tells ANS the SAREX
QSL's for STS-83 & STS-94 were sent out on December
15th, 1997. The Bergen Amateur Radio Association of Northern NJ conducted
the QSL adventure for this latest SAREX Shuttle Mission. Thanks to the
efforts of John Chooljian, K2KRF, John Tworsky, KC2EV, Mike Surmick, K2QW
and Dee Interdonato, NB2F, the cards were processed and distributed as
quickly as accuracy permitted. Dee hopes all that were waiting will be
getting a well deserved Holiday present from the SAREX group.

[ANS thanks Dee Interdonato, NB2F, for this news.]

AMSAT '98 PLANS MOVING AHEAD

HR AMSAT NEWS SERVICE BULLETIN 355.043 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 21, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-355.03

Bill Ford, WB5SXK, reports that plans are moving forward for the
1998 Amsat Symposium to be held in Vicksburg, Mississippi from
October 9 through 11, 1998.

Bill says that the hotel location will be confirmed within a few weeks.
In the meantime, WB5SXK does have some basic information about
the Vicksburg area on the following web site:

http://pages.prodigy.com/DXHF93A

This information is also reachable via a link from the Amsat-NA home
page.

[ANS thanks Bill Ford, WB5SXK for this information]

ASUSAT INFO

HR AMSAT NEWS SERVICE BULLETIN 355.04 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 21, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-355.04

The Amsat News Service was informed by
Assi Friedman, 4Z7ABA/KK7KX , of Arizona State University that

the FM repeater on the ASUSAT should offer a slight performance improvement over AO-27. The downlink antenna on ASUSAT will be located differently then AO-27 so it is expected to perform better too. The uplinks should be just as good as AO-27 as they are using a similar configuration. As to operating time, the repeater will use a PL decoder so it will not be turned on for an entire window, it will only operate if someone tries to access it. We have been redoing our power budget and it looks like we will be able to provide more operating time, maybe even in eclipses - even though there are no promises. The main factor that will determine the duty cycle of the repeater is resource sharing with the GPS and Camera, where the GPS is the second largest electron eater.

[ANS thanks Assi Friedman, 4Z7ABA/KK7KX , of Arizona State University for this information.]

FREE LOGGING SOFTWARE

HR AMSAT NEWS SERVICE BULLETIN 355.05 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 21, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-355.05

Mark, N8VEA, is offering his free software program designed for logging VHF, UHF and satellite contacts. The program is called VHF-DX 4.0, and is compatible with Windows 95. The program covers all aspects of VHF, UHF and satellite logging. In addition, it tracks several awards such as VUCC, WAS and DXCC. For satellite use, it logs the name of the satellite as well as the up/down mode. Mark reports he has recently added both the MIR station and the space shuttle to the list of satellites. VHF/UHF contesting is also supported.

You can download the latest version at the N8VEA web site:
http://www.qsl.net/n8vea

[ANS thanks Mark Hoersten , N8VEA, for this information]

MIR
MIREX chief Dave Larsen, N6CO, reports that an announced crossband ''experiment'' has been abandoned for now because of problems with the antenna on MIR. The crossband test was to have begun December 1 and was to have involved a 70 cm uplink and a 2-meter downlink. US astronaut Dave Wolf, KC5VPF, has been on 145.985 MHz FM simplex from the Russian space station, but only sporadically.

A space walk at the end of December will check and--if necessary--repair the 2-meter/70-cm antenna that might have been damaged during a space walk in November. The Kenwood TM-733 aboard Mir has been connected to the spacecraft's SAFEX repeater antenna.

The Russian MAREX team and North American based MIREX team are aware of the problem with the new TNC on Mir. They know exactly what the problem is, They just need to wait for the crew to have time to make the adjustments. Mirex has had detailed discussions with MAREX on which settings need to be changed to restore full operations. The MIREX team was informed that the crew was very busy and it may take a few days for them to make the changes. When they do have time, they will make the adjustments. So, everyone is asked to be patient in the meantime.
[ANS thanks the ARRL and MIREX team for this information]

SAFEX, MIR 70cm Repeater (Uplink 435.750 MHz FM, Downlink 437.950 MHz FM, subaudible tone 141.3 Hz)
The SAFEX activity is very intermittent.
[ANS thanks the MIREX team for this information]

RS-12
(Uplink, 145.91-145.95 MHz CW/SSB, Downlink 29.41-29.45 MHz)
Operational, now in mode A.

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Operational.

RS-16
At this time only the beacons are on.
Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 and 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W

AO-10
(Uplink 435.030-435.18 MHz CW/LSB, Downlink 145.975-145.825 MHz
CW/USB)
Operational.

AO-27
(Uplink 145.85 MHz FM, Downlink 436.792 MHz FM)
Operational
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update]

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Operational. FO-20 in mode JA continuously.
FO-20, like many Leo's is in a "sun synchronous" orbit. The precession in
the RAAN of its orbit due to the earth's oblateness matches the earth's
rotation around the sun so that FO-20 always has about 33 minutes of
eclipse time each orbit and the rest in sunshine. A sun synchronous orbit
is a retrograde LEO polar orbit with an inclination of about 98 degrees.
At this inclination RAAN precession = 360 degrees in 365 days. The
stability in temperature and solar energy is, needless to say, very
helpful. The ratio of eclipse to sunlight can be adjusted by varying
initial orbital elements. FO-29, for example, is virtually always in
sunlight, UO-11 has about 22 minutes of eclipse, most seem to run about 33
minutes eclipse per orbit.

This also means that FO-20 (and other sun synchronous sats) appear at your
location at about the same "sun time" every day. At my QTH FO-20 goes over
about 1:30 PM and 3:30 PM every day. UO-11, AO-16, DO-17, WO-18, LO-19,

UO-22, KO-25, AO-27, FO-29 etc are also in sun synchronous orbits. KO-23,
RS-12/13, RS-15, though in highly inclined orbits, are not sun synchronous.

OSCAR-11
(Downlink 145.825 MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz)
Operating normally.
OSCAR-11 REPORT 15 December 1997
During the period 16 November to 15th December this satellite has
continued to provide good signals on its 145.826 MHz. beacon,
although some interference has occurred from DOVE and Sputnik-40,
which also transmit near this frequency.

Two reports have been received about the mode-S beacon. Carl WA7PIB
reports 3-4 S points above the noise, compared with Dove's 8-9. A
station in Sweden also reports the beacon at 8 dB above the noise.
Many thanks for those reports.

The telemetry is nominal. Internal temperatures have continued to fall, and at the present time are 8.8C and 6.4C for battery and telemetry electronics respectively. This fall in temperature is due to increasing in solar eclipse times, which are expected to reach a maximum in early February.

Two WOD surveys have been transmitted during the period. Both are of Channels 10, 20, 30, 40 (+Y, -X, +X array currents, array voltage). The previous WOD dated 29 October continued until it was replaced by a survey dated 14 December. These show the effect of solar eclipses, on array currents, and voltage.

The new format AMSAT-UK bulletin, No. 114 is now being transmitted. This contains details of amateur satellite frequencies and modes of operation. It may be changed at monthly intervals.

The operating schedule is unchanged.

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The mode-S beacon is ON, transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and delivering half power. This beacon is a useful test source for those testing mode-S converters, prior to the launch of P3-D. It is considerably weaker than DOVE, which should be used for initial testing. Any reports of reception on 2401 MHz. would be most welcome. Please e-mail g3cwv@amsat.org.

The 435.025 MHz. beacon is normally OFF. However it can sometimes be heard when the satellite is being commanded by ground control, ie. within range of Guildford, UK. When the 435 beacon is transmitting, the 145 beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit my web site. It contains some software for capturing data, and decoding ASCII telemetry and WOD. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded, as new data is captured. The URL is -

Sadly, RS-10/11 went silent some time ago. It was a great satellite. I've heard that some of the controllers have tried (or will try) to restart the transponder, so check the beacon frequency periodically just in case.

3074. Re: Mobile AO-27 ?

Newsgroup: rec.radio.amateur.space
Date: 1997-12-22 00:00:00 UTC
From: John Mock <kd6pag@nospam.mocha.ecofe.com>
Message-ID: <4mpvmoq5wa.fsf@spinner.ecofe.com>
Source record: 17347

I find that even on optimal passes, the recieve signal strength of AO-27 is very weak - nearly inaudible. Does anyone have any good experience of working AO-27 mobile ? What kind of antennas are best ?

Try it on a pass closer to the horizon on your existing antenna. It's been coming in weak at times for me in the past week, so i'm not sure if it's me or AO-27.

I have just bought a Yaesu 8100 dual band mobile rig - and wanted to use it for Satellite use. The antenna is a dual band on-glass 1/2 wave.

An antenna intended for terrestrial use may not work well for AO-27 on high elevation passes, especially omni gain antennas. Their 'panacake' pattern is great for terrestrial work, but, by design, they don't work well skywards. I'm running a Yaesu FT-5100 mobile into a homebrewed 2 meter quaterwave tuned for good SWR at 70cm. It's sub-optimal for repeaters, as much of its energy goes skywards, but it's fine for AO-27. AO-27's receiver is very sensitive, so the vertical pattern at 2 meters is less critical. I only use the generic 70cm gain antenna on the low elevation passes, and with duplexer into the 2 meter antenna for the uplink.

Be aware than most folks use either a pre-amp or a directional gain antenna, like the dual-band yagi from Arrow Antennas. So if you're hearing it weakly, then you know that you're getting somewhere and that there's something you can do about it. If you try the 2 meter quarterwave trick (say, with a mag mount), check your SWR on 70cm before transmitting, so you don't have problems with your rig if you forget and leave it connected. And let me know your results, positive or negative, as i'd like to know if my approach is reproducible. Expect some overhead fading with a 2M quarterwave, and it doesn't do so well after the top of the past, as i'm told the downlink tends to be less compatible with vertical polarization after that.

IMPORTANT: AO-27 has a very sensitive receiver and there's almost always someone on passes over the 'States. So please make sure you can copy at least partial callsigns before transmitting to AO-27, or you'll just be causing interference.

You might be able to work the MIR/SAFEX repeater as well, but the 5 KHz step size of the FT-5100 seems to be a significant impairment for me in its current configuration, as sometimes i'm in solid and other times, i'm not copyable. But it's not on right now, as last i heard, they were using its antenna for voice/packet until later this month when a spacewalk will be done to check out and/or repair of its normal

voice/packet antenna.

I didn't catch your callsign, but a quick check of the callbook tells me that there's a good chance i haven't worked your state and/or grid, so i'm looking forward to contacting you. And if i don't catch you, probably someone from the 'Utah contingent' will; they're real friendly, especially with new stations.

If you're looking for something simple and relatively inexpensive, I'd
recommend the MGA 86576 GaAs MMIC (available from Down East Microwave).
I've used them in the front end of 3456 and 5760 MHz transverters. They

have more gain and a better noise figure than the MAR series MMIC's.

3079. NORAD Two-Line Orbital Element Sets (TLE115)

Newsgroup: rec.radio.amateur.space
Date: 1997-12-23 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <67pb7d$k81$1@blackbird.afit.af.mil>
Source record: 17352

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Source record: 17353

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great shape almost like new. Email: n2rif@amsat.org You can try calling but my phone is usually busy cause Im on the net most of the time. My ph# is 609-386-9382..
New it cost over $430 for everything. I am asking $290 OBO. It is assembled. The shipping will probably be a bit too expensive!! So anyone who is within driving distance should probably re: My qth is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

3081. Question re: SAT modes of operation

Newsgroup: rec.radio.amateur.space
Date: 1997-12-24 00:00:00 UTC
From: lojack@ix.netcom.com
Message-ID: <34a11f92.8575488@nntp.ix.netcom.com>
Source record: 17354

Is there a way to tell what mode of operation a satellite is
in?

I have just started experimenting with the easy sat rs-12/13
recently. I don't have an all-mode VHF rig so I workthe thing in the
blind using an ICOM-730 split and hand switching between bands. It
worked pretty well 'til the bird was switched to MODE A.

How can you tell what mode a satellite is in without looking
like an idiot calling CQ RS 12 on 20 meters 'til you're blue in the
face?

Thanks,

Scott, WB5PBJ

3082. Re: Radar/Laser Scrambler !!!!

Nahh!!! Doesn't take much to contend with a reflected pulsed beam. Heck a series of LED's would do it.

Scott,
All current voice sats, except FO29 remain in the same mode all the
time. RS12 and RS15 are continuous mode A, FO20 Mode JA, AO13 Mode B.
FO29 is mode JA every fourth week, on a rotating basis with the digital
modes. I believe that it next goes into JA this Friday, Dec. 26th.

Have fun with the sats...

Rick T. W7RT

3085. STS-83 & STS-94 QSL's

Source record: 17360

Hello!! I'm very interested in working the RS-15 sat. I have worked the RS-10 in the past (I understand it is no longer operating) with very good success. I understand RS-15 is about 1000KM higher in orbit than the RS-10. Will I be able to reach the RS-15 with the following equipment:

1. 2M SSB (17 watts)
2. Ringo Ranger (3DB gain) Antenna
3. !0 meter receiver with 10M preamp...

...or am I stretching it?

Any thoughts on a good antenna would be aprpeciated as well.

73 and Happy Holidays.

Source record: 17361

Larry,

It should be possible. I have worked on RS-15 with 25 watts and a horizontal omni (0 dBd). A good 10 m antenna will do wonders. The bird's RX is sensitive enough, but the downlink signal is on the weak side. You may find that CW works much better.

Hope to work you on RS-15.

73 $ Season's Greetings de VE7MDL ....Erik.

FTV is a software only package that can be used to receive images from
Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from radio
telex services, Morse code, as well as Amateur Radio FAX, SSTV, RTTY and CW
signals. It can also transmit Amateur Radio FAX and SSTV. No external
hardware, other than a radio, is required, as all the necessary signal
processing is implemented in software.

The main features include:
WEFAX, FAX, SSTV, colour SSTV, RTTY and CW operation.
Transmits 6 FAX modes, 8 monochrome SSTV modes, 10 colour SSTV modes.
FAX operation supports APT signal recognition and scheduled reception.
No external decoder or converter box is required.
Signal analysis is provided on all modes.
Many parameters are adjustable while receiving.
Full recovery from wrong mode settings is possible.
Program works in real time (about 1 second 'DSP' time lag)

I have improved documentation considerably and an illustrated user's manual
is now
available. You may get more information or download a copy from my web site,
on http://www.geocities.com/SiliconValley/2504

3094. MIR repeater working?

Newsgroup: rec.radio.amateur.space
Date: 1997-12-27 00:00:00 UTC
From: nungeste@sdd.hp.com
Message-ID: <883262678.510700@cs1.sdd.hp.com>
Source record: 17367

I am trying to make my first satellite QSO using MIR's FM voice repeater at 437.950 MHz downlink, 435.750 MHz uplink, 141.3 Hz CTCSS. During a near-overhead pass today, I heard nothing. I accounted for Doppler and was using a 35 Watt FM mobile rig and trunk-mount antenna.

Is the repeater working? Where can I get updates regarding MIR's amateur radio status?

SB SAT @ AMSAT $ANS-362.02
SKN REMINDER

HR AMSAT NEWS SERVICE BULLETIN 362.02 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 28, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-362.02

Amateur radio operators worldwide are cordially invited to join in the 26th annual Straight Key Night on OSCAR, sponsored by AMSAT-NA for ham radio satellite enthusiasts.

According to Ray Soifer, W2RS, it's entirely unofficial with no rules, no scoring and no need to send in a log. Just call CQ SKN in the CW passband segment of any OSCAR satellite from 0000 to 2359 UTC on January 1, 1998, or answer a CQ SKN call from another station. OSCAR Zero (EME) contacts count too.

Of course, all SKN operating must be done with a straight hand key. Those participating are encouraged to nominate someone they worked for recognition as having the "best fist." To send in a "best fist" nomination, please send it to;

e-mail - w2rs@amsat.org

packet radio - W2RS @ WA2SNA or
W2RS @ GB7HSN

Regular mail can also be sent to the W2RS callbook address.
Those nominated will be featured in a bulletin sent to many of the
amateur radio publications and posted via ANS, packet radio and the
Internet in early February.

[ANS thanks Ray Soifer, W2RS, for this information]

Amsat-UK has informed the ANS that RJC Broadbent, G3AAJ,
will retire from the position of Amsat-UK Secretary as of 31st December;
he continues as a member of the Amsat-UK Committee (BoD) as representative
to various worthy bodies such as IARU, ISS etc.

The demanding task of Honorary Secretary has been taken on by Fred
Southwell, G6ZRU, (g6zru@amsat.org). And Fred's beautiful XYL, Jenny,
G1LIT, has taken the position of Honorary Treasurer.

Consequently the telephone and fax numbers are changing.
AMSAT-UK's telephone number changes to +44 1273 495733
and Fax to +44 1273 492927.

Other changes to the Amsat-UK Committee can be found in the most recent
issue of Oscar News which members should have received before Christmas.
In particular, folks renewing their annual donation should note that it
should now be sent to Fred's address (or rather Jenny's - which is the
same):

F S Southwell G6ZRU
40 Downsview
Smalldole
Henfield
West Sussex BN5 9YB
United Kingdom

An announcement by G2UK in Oscar News (No 20) of January 1978 hailed G3AAJ's
arrival as Amsat-UK's first Secretary; the grapevine said he "did things to
light-houses" for a living.

The very next edition of Oscar News saw Ron taking us to task for various
matters; let it never be said that he doesn't start out as he means to carry
on.

That edition also announced that Amsat-UK's minimum donation would be three
pounds for the ensuing year. It is no small tribute to Ron that now, twenty
years on, the amount has only risen by a small amount (to fourteen pounds);
his ability to extract money for the amateur satellite program from all and

sundry has been nothing short of phenomenal.

Ron's efforts over the years led to him receiving the MBE three years ago; everyone is agreed that the award was well earned but, to Ron, someone saying "thanks for your hard work" and buying him a beer is appreciated almost as much.

[ANS thanks Richard W L Limebear, G3RWL, for this news.]

SB SAT @ AMSAT $ANS-362.04
ONLINE QSL CONTROVERSY

HR AMSAT NEWS SERVICE BULLETIN 362.04 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 28, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-362.04

Goran Fagerstrom, SM0DRD, informed the Amsat News Service that in ANS Bulletin 355.06 (December 21), which included an item on the DXCC admissibility of online QSLs from their Cuban expedition (using the call T49C on satellite), citing that 'they were easy to modify'. The issue is not new, it was discussed over several reflectors and in email to them since they started their QSL Server at SK0UX this summer. For those unfamiliar with the concept, it means that you may search for your QSOs on the Internet and then download your QSL as a file for printing on your local printer, thus bypassing SASEs, IRCs, green stamps and saving a lot of work, money, and speed.

The T49C team has consciously chosen the present technical solution instead of including 'unbreakable electronic seals', like check-sums, in the file representing the QSL which you may download and print. Some people have suggested such solutions to detect modification, but at present the T49C team feels they are overkill. The key idea is that any awards committee can verify a QSO *at any time* by looking up the QSO again. So this concept in fact offers *greater* proof against tampering than traditional QSLs, which hams have been known o falsify (isn't that amazing). They have emphasized this to the DXCC Advisory Committee in positive discussions.

Many hams have said that making cards available via the Internet is 'an idea long overdue' with huge potential gains. One U.S. ham has already received our source code and has set up a QSLs Online Server of his own.

Feel free to explore the concept at http://ham.te.hik.se/clubs/sk0ux (go to the 'QSLs Online by SK0UX' page and to the Cuba page)! Comments are very welcome (to goran@tjansteforbundet.se) and they feel that there is a lot to be gained by continuing the already ongoing collective brain-storming. Their implementation is not cast in stone.

Stay tuned to ANS for further information about this controversy.
[ANS thanks Goran Fagerstrom, SM0DRD, for this information.]

SB SAT @ AMSAT $ANS-362.05
VHF CONFERENCE

HR AMSAT NEWS SERVICE BULLETIN 362.05 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 28, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-362.05

The second annual Southeastern VHF Society Technical Conference will be held Friday and Saturday, April 3 and 4, 1998 in Atlanta, Georgia!

The dates and location of our inaugural Conference proved to be so popular that we are staying with the same weekend and location in 1998 - the Atlanta Marriott Northwest located between Atlanta and Marietta. A special Conference room rate of $69 per night plus tax is available to attendees. Fore reservations, please call the Marriott at 1-800-228-9290.

SVHFS Award: The Southeastern VHF Society will present the SVHFS Award annually in recognition of exceptional contributions and service to the Society or the VHF/UHF community in general. Presentation of the first SVHFS Award will take place at the Saturday evening banquet. For more information on the SVHFS Award, please contact Steve Adams, K4RF (ex-WS4F), SVHFS President at stevews4f@aol.com

Call for Papers: Program Chairman Bob Lear, K4SZ, has issued a call for papers. If you are interested in making a technical presentation or having a paper published in the Proceedings, please contact Bob at:
Bob Lear, K4SZ
P. O. Box 1269
Dahlonega, GA. 30533
706-864-6229
k4sz@stc.net

Antenna Measurements: Antennas will be measured Friday, April 3rd starting with 144 MHz and working up in frequency - amateur bands only, please! A maximum of two antennas per band per individual may be tested. Please supply a female N connector or SO-239. Please indicate the antennas you will be bringing on your registration form. Walk-ups will be tested as time and space permit, so please pre-register! For more information, or if you would like to test a commercial antenna, please contact Antenna measurements Chairman Dale baldwin, WB0QGH, at wb0qgh@mindspring.com

Noise Figure Testing: Noise figure testing will be conducted on Saturday, April 4th. Attendees will be assigned a time for testing based on receipt of their Conference registration form. For more information, contact Noise Figure Measurements Co-Chairmen Charles Osborne, WD4MBK, at cosborne@pipeline.com or Fred Runkle, K4KAZ, at engineer@rightmove.com

In addition to technical presentations, antenna measurements and noise figure testing, activities will include:
Friday evening flea market

Saturday evening banquet
SVHFS auction
Family program

Please make plans now to attend this fun event! We are determined to
make our second Conference even better than our first - with your help!
Register before March 14, 1998 and receive a discount!

For more information on the Southeastern VHF Society or our 1998
Conference, please visit our web site at
http://www.akorn.net/~ae6e/svhfs

[ANS thanks Tad Danley, K3TD, for the news about the conference.]

SB SAT @ AMSAT $ANS-362.06
NEW YEAR'S SOFTWARE TIP

HR AMSAT NEWS SERVICE BULLETIN 362.06 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 28, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-362.06

Richard W L Limebear G3RWL, gives ANS this software tip for 1998.
When the new year starts, so do the day-numbers in the keplers; and some
old tracking software refuses to cross between the years. A tactic to use
in this instance, until 1998 keplers arrive, is to deceive the software by
giving it a 1997 date; i.e. 2 January is 33 December etc.

Another problem comes in some software when the epoch in the keplers
contains spaces, i.e. "1998__4.xxxxx"; the tactic here is to edit the
kepler file before feeding it into the program so that the spaces are
replaced by zeros -extra zero's do *not* affect the checksum of 2-line
elements.

Some amateurs still use "old" tracking software which requires a sidereal
time offset and it is necessary to update it at the beginning of each year.
The number for 1997 was 0.27693880 and the number for 1998 is 0.27627570.

Of course, it would be better to buy new tracking software from your local
Amsat organization; all recent software calculates sidereal time routinely.

[ANS thanks Richard W L Limebear G3RWL, for this software tip.]

WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 362.07 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 28, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-362.07

MIR
MIREX chief Dave Larsen, N6CO, reports that an announced crossband ''experiment'' has been abandoned for now because of problems with the antenna on MIR. The crossband test was to have begun December 1 and was to have involved a 70 cm uplink and a 2-meter downlink. US astronaut Dave Wolf, KC5VPF, has been on 145.985 MHz FM simplex from the Russian space station, but only sporadically.

A space walk at the end of December will check and--if necessary--repair the 2-meter/70-cm antenna that might have been damaged during a space walk in November. The Kenwood TM-733 aboard Mir has been connected to the spacecraft's SAFEX repeater antenna.

The Russian MAREX team and North American based MIREX team are aware of the problem with the new TNC on Mir. They know exactly what the problem is, They just need to wait for the crew to have time to make the adjustments. Mirex has had detailed discussions with MAREX on which settings need to be changed to restore full operations. The MIREX team was informed that the crew was very busy and it may take a few days for them to make the changes. When they do have time, they will make the adjustments. So, everyone is asked to be patient in the meantime.
[ANS thanks the ARRL and MIREX team for this information]

SAFEX, MIR 70cm Repeater (Uplink 435.750 MHz FM, Downlink 437.950 MHz FM, subaudible tone 141.3 Hz)
The SAFEX activity is very intermittent.
[ANS thanks the MIREX team for this information]

RS-12
(Uplink, 145.91-145.95 MHz CW/SSB, Downlink 29.41-29.45 MHz)
Operational, now in mode A.

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Operational.

RS-16
At this time only the beacons are on.
Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 and 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W

RS-17
Operational. 145.820 MHz
12/28/97 20:46 UTC
1360 Hz => 49.5C => 121F
[ANS thanks Glenn Bock for this report.

New Sputnik-40 QSL Address QSL Information is as follows:
QSL Information for SWL (Short Wave Listener)

Sergey Samburov (RV3DR)
P.O. Box 73
Korolev-10 City
141070, Russia
[ANS thanks the MIREX team for this information]

AO-10
(Uplink 435.030-435.18 MHz CW/LSB, Downlink 145.975-145.825 MHz
CW/USB)
Operational.
Mark Fossum, N0NSV, reports he just completed a QSO with
VE7LKA at 0652z 12/27/97. AO-10 was at a
range of 37,981 from his location in Rugby ND (DN98).
AO-10 is still doing the job!
[ANS thanks Mark Fossum, N0NSV, for this update on AO-10.]

AO-27
(Uplink 145.85 MHz FM, Downlink 436.792 MHz FM)
Operational
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update]

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Operational. FO-20 in mode JA continuously.
FO-20, like many Leo's is in a "sun synchronous" orbit. The precession in
the RAAN of its orbit due to the earth's oblateness matches the earth's
rotation around the sun so that FO-20 always has about 33 minutes of
eclipse time each orbit and the rest in sunshine. A sun synchronous orbit
is a retrograde LEO polar orbit with an inclination of about 98 degrees.
At this inclination RAAN precession = 360 degrees in 365 days. The
stability in temperature and solar energy is, needless to say, very
helpful. The ratio of eclipse to sunlight can be adjusted by varying
initial orbital elements. FO-29, for example, is virtually always in
sunlight, UO-11 has about 22 minutes of eclipse, most seem to run about 33
minutes eclipse per orbit.

This also means that FO-20 (and other sun synchronous sats) appear at your
location at about the same "sun time" every day. At my QTH FO-20 goes over
about 1:30 PM and 3:30 PM every day. UO-11, AO-16, DO-17, WO-18, LO-19,
UO-22, KO-25, AO-27, FO-29 etc are also in sun synchronous orbits. KO-23,
RS-12/13, RS-15, though in highly inclined orbits, are not sun synchronous.
[ANS thanks Stacey Mills, W4SM, and Kazu Sakamoto, JJ1WTK, for this report]

FO-29
Voice/CW Mode JA
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Digital Mode JD
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600
baud BPSK)
Operational.

26 Dec. 07:42z JA
09 Jan. 07:14z JD 1200
16 Jan. 07:52z JD 9600
23 Jan. 08:30z JA
30 Jan. 07:24z JD 1200

SB SAT @ AMSAT $ANS-362.08
WEEKLY SATELLITE REPORT PT 2

HR AMSAT NEWS SERVICE BULLETIN 362.08 FROM AMSAT HQ
SILVER SPRING, MD, DECEMBER 28, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-362.08

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK)
KO-23 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for this report]

KO-25
(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM, 9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for this report]

OSCAR-11
(Downlink 145.825 MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz)
Operating normally.
The operating schedule is unchanged.

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is
transmitted, and between ASCII TLM and WOD.

The mode-S beacon is ON, transmitting an unmodulated carrier, but
telemetry indicates that it has partially failed, and delivering half
power. This beacon is a useful test source for those testing mode-S
converters, prior to the launch of P3-D. It is considerably weaker
than DOVE, which should be used for initial testing. Any reports of
reception on 2401 MHz. would be most welcome. Please e-mail
g3cwv@amsat.org.

The 435.025 MHz. beacon is normally OFF. However it can sometimes be
heard when the satellite is being commanded by ground control, ie.

within range of Guildford, UK. When the 435 beacon is transmitting, the 145 beacon is normally OFF. The data transmitted is mainly binary.

OSCAR-11 users are welcome to visit my web site. It contains some software for capturing data, and decoding ASCII telemetry and WOD. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded, as new data is captured. The URL is -

Date: 1997-12-28 00:00:00 UTC
From: lawrenceh@peverell.demon.co.uk
Message-ID: <34a93883.179052956@news.demon.co.uk>
Source record: 17371

I shall be posting wxsat frequencies here each month. Meanwhile:

For those interested in the weather satellites (wwxsats) the following
are operational:

Polar orbiters:
NOAA-12 picture data on 137.50MHz and beacon on 136.77MHz.
NOAA-14 picture data on 137.62MHz and beacon on 137.77MHz.
Meteor 3-5 picture data in sunlight only on 137.85MHz.

Geostationary:
reception depends on longitude:
WEFAX transmissions on 1691.0MHz
Meteosat-6 (also WEFAX on 1694.5MHz) at zero longitude.
Goes-8 75 degrees long.
Goes-9 135 degrees long.
GOMS at 76 degrees long.
GMS at 139 degrees long.
Fengyun-2 at 104 degrees long.

3101. Dipole with ladder line

Newsgroup: rec.radio.amateur.space
Date: 1997-12-28 00:00:00 UTC
From: orion@xyznycap.rr.com
Message-ID: <34a67214.2174587@news>
Source record: 17372
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.space

I have some 450 ohm ladder line which I would like to connect to a
10 meter dipole to receive the downlink signal of the RS-12 satellite.
I'm not sure how to connect this line to my receiver. (Kenwood R-1000)
I have a receive tuner/preamp which can be connected between the
antenna and the receiver. It has both a SO 239 connector and 1/8"
phone jack for antenna connections. They are hooked together, not
switchable. The R-1000 also has both a SO 239 and a single wire clip
connector for an antenna, with a switch to select either one but not
both. Any suggestions would be appreciated.

A dipole has an impedance of around 75 ohms, wont match your line
without some mods.
Try a folded dipole, with a 450 ohm resistor connecting the folded parts
together. Check the ARRL antenna book for other dipole mods that get 450
ohm impedances.

Practically, it does not make much difference, on reception.
Thus, you probably don't need to do much at all, on average reception.
But, if you want to optimize the match, then an impedance transformer
of some sort would be required to match the 450 ohm line to the
50 ohm line input (a 9:1 balun would do, or a 1/4 wave of 50/75/90
ohm coax at the frequency of use, or even an L network tuner).
For a quick and dirty fix, I would opt for a 1/4 wave of coax to
feed into the open wire line, and use a whole half wave or integral
multiples thereof of the open wire line to reach the antenna.
If I were more serious, I would build a small L network with a coil
of around 10 turns on a 1 inch form spaced to about 1 inch length,
and a 25-50pf variable capacitor. Put the HiZ side to the antenna line
and the loZ side to the receiver and tune for optimal signal strength.

Source record: 17377
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.space

Hello all, I am in the market for a single-connector, dualband antenna for use in mode B or J satellite work. This antenna must be a fixed unit (since I spent all my money on Christmas presents and can't afford an az/el rotator), and should be inexpensive, or fairly easy to build. I would like to be able to work the "easy sats" (Mir, Dove) as well as some of the less-easy ones (FO-29, AO-27, etc). I have looked at Arrow Antenna's dualband J-pole, which is certainly fixed and inexpensive. Does anyone out there have firsthand experience using this for satellite work? I'd appreciate any suggestions for antenna types, comments, or whatever. Thanks in advance, de Dan, N2PRC.

I can't speak for satellite WEFAX, but the only SoundBlaster HF FAX receiving software I've *ever* seen run successfully under Windows 95 is the new release of WXSAT, which despite the name does HFFAX now too. Thanks to Christian Bock for an excellent piece of software!

=========
SpaceNews
=========

MONDAY DECEMBER 29, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* MIR NEWS *
============
MIREX president Dr. Dave Larsen, N6CO, reports that the previously announced
Mir crossband frequency experiment has been abandoned for now because of
problems with the amateur radio antenna on Mir. The crossband test was to
have started on 01-Dec-97 and lasted three months. It was to have involved
a 70-cm uplink to Mir along with a 2-meter downlink. US astronaut Dave Wolf,
KC5VPF, has been on 145.985 MHz FM simplex from Mir, but only sporadically.

A space walk at the end of December will check, and if necessary, repair the
2-meter/70-cm dual-band antenna on Mir. There is concern that the antenna
may have been damaged during a recent space walk that took place in November.
The Kenwood TM-733 transceiver aboard Mir has been connected to the
spacecraft's SAFEX repeater antenna for the time being.

The new packet radio TNC on-board is currently suffering from a problem that
is the result of improper parameters being entered into the TNC. The TNC is
not properly interpreting the DCD (data carrier detect) logic, and thinks
the uplink frequency is busy most of the time, even when it is clear. The
internal timers in the modem will periodically respond to packet data,
and dump the contents of the TNC's transmit buffer in a long transmission.

Groundstations are asked to refrain from using the Mir PMS until the crew
has time to correct the problem. This request also applies to those who,
despite repeated requests, continue to digipeat beacons and holiday greetings
via the Mir TNC.

The MIREX teams is hopeful that the problem with the TNC can be cleared up
before the end of the year.

In the meantime, here is a list of the commands interpreted by the new TNC
on Mir:

LL n LIST LAST n MESSAGES
LM(ine) LIST UNREAD MESSAGES ADDRESSED TO YOU
LO [+|-] LISTING ORDER

[Info via the AMSAT News Service, WF1F, and CT1EAT]

* HINTS FOR THE NEW YEAR *
==========
Richard, G3RWL, reminds satellite users that when the new year starts, so do the day numbers in the Keplerian elements used by satellite tracking and orbital prediction software, and some old tracking software refuses to cross between the years. A tactic to use in this instance (until 1998 keplers arrive) is to deceive the software by giving it a 1997 date; i.e. 02-Jan-98 is 33-Dec-97, etc.

Another problem comes in some software when the epoch in the keplers contains spaces, i.e. "1998__4.xxxxx". The tactic here is to edit the kepler file before feeding it into the program so that the spaces are replaced by zeros. Extra zero's do *not* affect the checksum of 2-line elements.

Some amateurs still use "old" tracking software that requires a sidereal time constant for the current year. The siderial time constant for 1997 was 0.27693880 and the value for 1998 is 0.27627570.

Hi,

Im a 14 yr old kid who likes astronomy. Right now im heavily into optical astronomy. I would like to get into radio astronomy. Im sure some people will say im crazy, but I would like a nice system that I could use to search for extraterestrial lifeforms. As of now I know nothing about radio astronomy. I would like someone so recomend a system for me, please be very specific. I dont have a whole lot of money so it cant be too much. Please let me know what it would cost. Also please tell me why the system you recomend would be good. Thanks a bunch.

Seems to me that these responses are making a mountain out of a
molehill.

If the dipole's impedance really is 72 ohms, and I'm not suggesting
that it is, why not just use 75 ohm coax of any length directly to the
receiver. If the dipole is 72 ohms, then the mismatch at the 50 ohm
receiver would be very moderate.

Dereck, congrats on being 14 and interested in science. I don't know
much about radio astronomy, so I can't be of much help, but I can
give you encrouagement. I think most work in this field is being
done with LARGE dish antennas and very high quality receivers. But
I bet you there is info out there that will help you get started
with a low budget setup.
I started in HAM radio at about 12 or 14 (I'm 59.5 now) by reading
mags and books on radio construction. Been building all kinds of
stuff ever sense. I learn so much reaserching a project and building
it. Taking old throw away radios and TVs and making them into something
I can use in the hobby is my hobby in a hobby. I've built several
telescopes over the years, (back when lenses were inexpenseve) got
most of my stuff from Edmonson, but their prices have gone out of
my range for experimentation.
A foot note to all this is that my wife gave me a Jason 675 X 4.5"
reflector scope Model 518s for Xmas. It's the first polor mount I've
ever owned. (now this is a learning experence).
Enough babble from an ol man, keep up the good work Dereck.

Well Dereck, the best way to get started is to get a vhf or uhf reciever and point a directional antenna toward the sky over time you can monitor galactic noise and you'll see a peak when you pass by the center of the galaxy. You can also build a downconverter and use an HF or shortwave radio. Even the most basic system will cost you at least $100 assuming you have a good shortwave reciever. Plus you need some fair experience with radio and RF to get the thing going.

If your looking to actually monitor 'signals' from pulsars etc you'll need equipment in the thousands of dollars, check out the book Radio Astronomy by John Potter Shields, Its an old SAMS publication but a good primer for you.

People have asked me exactly the same question when they see
the APT pictures I receive (NOAA-12, NOAA-14 and Meteor 3-5).

Why do I do it? Because I'm curious. Because I like to tinker
with radio and electronics. The pictures, while neat, are
merely a byproduct - it's the pleasure of taking a pile of bits
and using them to receive signals from space that really matters.

I'm currently improving my setup, and considering HRPT. S53MV's
article in VHF Communications 3/97 was most inspiring...

Hi,

I'm not into radio astronomy but if your interested in the search for
ET then the SETI organisation maybe of interest to you. The following
are taken from a magazine artical published in the UK.

SETI web site http://www.setileague.org/

postal address:-

The SETI League Inc,
PO Box 555,
Little Ferry,
NJ 07643
USA

They have designs for RX equipment that I would imagine is detailed in
their technical manual, ISBN 0-9650707-2-7, available for $10.

USA

They have designs for RX equipment that I would imagine is detailed in
their technical manual, ISBN 0-9650707-2-7, available for $10.

MikeT

3119. NORAD Two-Line Orbital Element Sets (TLE116)

Newsgroup: rec.radio.amateur.space
Date: 1997-12-29 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <6896eb$6b8$1@blackbird.afit.af.mil>
Source record: 17293

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

Make the dipole out of 300 ohm flat tv antenna wire (the cheap plastic brown stuff is fine).
Cut a length 16 1/2 feet long, trim back the wires at the ends a little, twist them together (if you have a soldering iron, solder them) then cover them up with electrical tape.
At the exact center, cut only one of the wires, peel back enough so they are about as far apart as width of the 450 feedline, then connect one wire each to the two ends of the 450 wire.
Get a 4 to 1 balun and connect the other end (in the house) of the 450 wire to the high impedence ("4") side.
Then connect a short piece of coax (inexpensive cable 75 ohm tv coax is fine) to the other side of the balun (the low impedence ("1") side).
Then connect a PL259 male connector (matches the SO239) to the other end of the coax and plug it in!

There are a number of other options, but this will work well and will be a good learning experience.

What you have created is a 10 meter folded dipole (with the tv 300 ohm flat line), then you've converted the 300 ohms to 75 ohms using the balun transformer. I would guess the receiver will be 'happy' with anything from 30-100ohms (the manual will tell you). You are providing about 75 ohms which is close enough, even if it prefers 50 ohms.

Go for it! 73, DavidC AA1FA

So, is the 15 meter uplink shutdown for RS 12? Please reply in email. Thanks.

This would work fine except a 1:1 balun would be needed at the antenna
end of the coax because the dipole is balanced and the coax is not,
prevents the line from radiating, but the original question was how to
do it with the 450 ohm line. This also could be done with the
appropriate impedance transformer.

Au contrair. I don't believe there is an issue here that requires a balun to prevent antenna currents on the feedline, because it was my understanding that this is a receive-only installation. I also do not accept the idea that it was originally a question of how to do it with ladder line. If you saw someone doing something in an awkward or inappropriate way, would you help him do it that way or would you offer to enlighten him as to a better way to do it. That was my intention, and I think that it's a sad commentary that not one single post responding to the original article suggested to him that he do it in the more rational way.

3126. WinOrbit install problem/workaround

Newsgroup: rec.radio.amateur.space
Date: 1997-12-30 00:00:00 UTC
From: nojunkspam.k8cg@amsat.org
Message-ID: <34A90988.74B0@amsat.org>
Source record: 17300

Recently a number of folks have complained about problems installing "WinOrbit" (versions 3.3 and later). I believe these are mostly new Win 95 systems (Santa Claus has been around recently....). The symptom is a message "Sub or Function Not Defined", after which the program quits. Here's what I have been telling people (and several users have reported that the workaround is successful):

"I suspect you will find a file "DIBAPI.DLL" on your system in addition to the one distributed with WinOrbit. Unfortunately, it is a different file, but since it was there first, the system tries to use it instead of the correct file.

You can rename or hide the old file temporarily (don't delete it - you may have other software that needs it.)

In the next release of WinOrbit, I will rename my file to avoid this conflict. The beta version with the fix will be available next week (5 Jan 98) at the WinOrbit web site (http://www.sat-net.com/winorbit)."

I post this here since this seems to be a widespread (but not universal) problem.

Source record: 17301

Howdy All,

I am preparing an article on a minimalist satellite station that can easily be carried along on most any trip.

Part of the station for orbital predictions and packet is an HP200lx running QT40. I have discovered the hard way several quirks with this combonation but one problem still eludes me.

The date/time format that QT40 Keplerian elements use is not the same as found with current Keps'. My question is: What is the format used and how do you convert either AMSAT or NASA data to the QT40 format?

Thanks for any light you can shed on this problem.

I neglected to mention in my original post the reason I wanted to use
the 450 ohm ladder line. Someone gave me 100' of the stuff, and I was
simply trying to find a use for it. I knew the impedance was wrong for
a dipole, but I thought someone might have a way to do it.

Help me on this... How much is Phil wanting in US Dollar??? I think I paid $350 back a year plus ago, from someone local and wanting out for a new hobby... Then I added the tone board from someone else who never installed it for (I think) $50... It is the American version, did I do OK??? It makes a great radio and I'm happy. I haven't looked to see what the stores are wanting for a used unit...

I have heard that just aboout any 2 meter antenna will work, but the 440 antenna needs to
have gain and directional. I saw plans on Compuserve's HAMNET for an OSCAR 27 quad.

I wonder if anybody has plans for a 2m/440 dual band 2 element quad? That would be great!

Hope it helps. I have not yet successfully worked AO-27.

Hello,

I've got a few questions about satellites and launching them.

* What is needed to launch a satellite ?
* Who can launch a satellite?
* How much does it cost to produce and launch a small satellite ?
* Who controls the amount and which satellites that are launched into
space ?
* Are there any laws involving the use of the space for this purposes ?

Thanks in advance,

Lode Vermeiren

Check out the dual band yagi antenna at
http://members.aol.com/Arrow146/index.html I have it and it works very well
with AO-27. If your on a major limited budget try a better handheld
antenna, I am using a MFJ-1717 it's 1/2 wave at 440 and 1/4 at 2m, It works
on the passes that go right over head. With your low power station you
would have better luck on weeday's instead of the weekend's and remember the
sat. is only on during the day.

As hard as it is to believe I have worked this satellite with a HT with only it's standard "rubber duckie" antenna running 2.0 watts out. Even I was impressed. I have found that it is easier to work it with my HT than my mobile, I suspect this is because the antenna on the mobile is fixed while with the HT I kind of move around and "capture" the signal. One pitfall to watch out for is the Doppler shift of the downlink. If you are a couple of minutes into the pass be sure to check below 436.80 - along these same lines make sure that the tuning step (how much higher or lower each click of the tuning knob or push of the button represents) is set as low as it can go (.005 on my alinco DJ580). And finally make sure you are listening at the right time, for the first couple of months I actually had my software set up 1 hour off and just kept missing the bird.

Good Luck, maybe we will chat on the satellite.

Paul....in working AO-27....the downlink is on 436.800 FM....hopefully your 2m/440ht will receive and operate below 440. I
bought a "satellite" rig only to find out that my 440 band....was exactly that....440 to 449.99!
The ARRL antenna book has a chapter on antennas for these bands and many of the examples are for "portable" situations.

There should be a program bundled with QT4.0 called qk.exe. That is Quik Kep. In DOS at the command prompt type qk <File name containing Keps><return> You will then be asked whjat kind of kep file you are using to update. The two "NASA" type works fine. I do it every week. If you need more details feel free to email me.

Good to see that qualifier. Except for an infinitely thin wire in free space,
a dipole won't be 72 ohms. For a horizontal wire of finite thickness above
Earth, it is more likely to be near 50 ohms.

>understanding that this is a receive-only installation.

Antenna systems are reciprocal. If a balun is required for transmit, it
is also required for reception. The effect of the imbalance on reception
is to alter the receive pattern of the antenna (same thing it does on
transmit). That may or may not be significant in a particular case, just
as it may or may not be significant in the transmit case. The main effect
for reception is to reduce the antenna pattern nulls. This could be bad if
you are using the nulls to reject an interfering station. (You don't face
the "hot shack" problem with a receive only setup, but the effect on
pattern remains.)

>in the more rational way.

Well, he says he wants to use ladder line because he has some.
That may not be the greatest reason in the world, but if that's what
he wants to do, I don't see anything wrong with it. If he does use the
ladder line, he won't need a balun at the antenna since the feeder is
also balanced. But he will need a tuner at the receiver end to provide
a conjugate match, and to provide the balun function for the receiver.
Just using coax feed with a balun at the antenna would be simpler
at the frequency where the antenna is resonant, but at all other
frequencies, he'll need the tuner anyway, so he might as well use
the lower loss feedline he already has instead of hunting up some
coax.

Thanks, Gary. As usual, your explanation is easy to understand and to
the point. I didn't mean to start an argument with the original post.
I just had the ladder line sitting around collecting dust and wanted
to see if it was worth using in this manner.

I am trying to make my first satellite QSO using MIR's FM voice repeater at 437.950 MHz downlink, 435.750 MHz uplink, 141.3 Hz CTCSS. During a near-overhead pass today, I heard nothing. I accounted for Doppler and was using a 35 Watt FM mobile rig and trunk-mount antenna.

Is the repeater working? Where can I get updates regarding MIR's amateur radio status?

It just came back on-line in the past day or two. I worked another California station, and had an incomplete contact with W0IOH. I also heard N7SFI make a contact with an Indiana station, and so you will probably find me trying for most decent Pacific passes from CM97, at least in the few days if it's still operating. I've had trouble getting into MIR/ SAFEX with a 5 KHz step-size on my mobile rig, so don't be surprised if you're in solid some of the time and inaudible other times, 'cause that's what happening to me right now.

Also, be aware that a terrestrial gain omni, such as a nice dual-band mobile antenna, may not work well for satellites. Given its "pancake pattern", which is what causes it to have gain, it does not work well skywards. So a pass close to the horizon may have a better chance for you than one that is directly overhead!

They were talking about doing a cross-band 2M/70cm experiment with the packet/voice station on MIR, with the uplink frequency too close to the SAFEX repeater to permit both to operate. That was postponed at last word, and i'm hoping that when they retry that experiment, they are able to use an uplink frequency for packet/voice that's low enough in the 70cm satellite sub-band that both cross-band packet and SAFEX can operate at the same time.

MIR status is routinely given in AMSAT News, and changes are also noted in SpaceNews. Both often posted here and are archived at AMSAT's FTP site, which usually includes the most recent edition as well.

Source record: 17318

I tried on a couple of good (60+ deg Max El) passes last weekend
with a DJ-580 and a Premier AL-800 long whip. I could hear the
sat just fine, but I couldn't hit it. I suspect that I'm suffering
from "tree attenuation", since I couldn't hear the sat until it
was well into its pass, but oh, the things I heard! Standing in
my driveway (Merrimack, NH) I heard Jacksonville, FL, Toronto,
North Dakota, and Texas! It was quite frustrating to not be able
to hit the bird. I kept the RX tuned to 436.795 throughout, so
maybe I need to tune around a bit to correct for doppler, too.

One of the things about AO-27 is that if you can hear it, you can
generally work it. It gets awfully crowded on weekends and holidays,
and that's probably your problem.

Last night, I assembled a Cushcraft A270-6S yagi. It's a little
under a yard long, and it has 3 elements on 2M and 3 elements on
70cm. It cost $59.95 at HRO, and it's reasonably light enough to
hand-hold (at least for me.) I'm hoping that the ~8dBd of gain
will be enough to get me into AO-27 without having to resort to
a power amp and pre-amp.

If you've heard it already, i would expect you'll do great with this.
I'm on most transcontinental passes and i hope to work you someday
from California. I've gotten MA and VT confirmed, so there's a decent
chance on low elevation passes you'll hear me if there aren't hills or
mountains to the west of you.

I wasn't aware that AO-27 is available on weekdays. All of the
info I've seen (mostly web pages that haven't been updated in
several months) says weekends only, with weekdays and nights on an
ad-hoc basis. Are we in the middle of an "ad-hoc?" Where can I
go to find the latest info?

It's on everyday for about 17 minutes, last time i checked, in the
northern hemisphere when it's in sunlight. So, when i can't use it in
the evenings in California, someone in Eastern Europe can instead.

http://www.umbra.com

contains current Information on AO-27.

Tomorrow's daytime passes are a bit low for me (MEL of 48.5 at 1006
and 23.5 at 1146 EST), but I may go outside and wave the beam around
just to see if I can hear anything. I get a couple more low ones on
Friday morning, a 66 deg MEL at 1052 EST on Saturday, and a nice, high
73.1 at 1025 EST Sunday. Maybe you'll finally hear me!

I find a 25 degree pass to be a good height, and you may be surprised how close to the horizon you can get when and where it's quiet. My biggest problem is noise modulated by 60 Hz harmonics in urbanized areas. I seem to do better in large areas with underground utilities.

With RS-12 switched into Mode A, AO-27 is the only satellite I can work with my current equipment. Does anyone know of any other bird running Mode K (15M up/10M down) so I can try to wear out the band switch on my IC-730 HF Transceiver? ;-) Maybe I'll try mic-keying to put an ugly CW signal into RS-12...

If you try that, pick a time/place where it's not busy. The problem is that the VFO is synthesized, and must rapidly switch frequencies between transmit and receive, so it has lots of phase noise and probably isn't very stable by CW/SSB standards. If you *must* attempt that hack, try putting a conventional key in series with a resistor of approximating the microphone impedance in place of the microphone, using with RG-174 or other shielded wire, so the transmitted is largely modulated internal noise in the rig rather than room noise. *Sigh* The transceiver's VCO is going to have to shift at least 10.7 MHz in a very short time (if it is to be any good at packet), so it's going to be ragged at best. If you were able to set the offset to the IF frequency and set it to receive on 156.700 and transmit on 146.000, then you could eliminate the shift, but there's still the phase noise problem. I can do this with my mobile rig, but not might HT as its firmware prevents that.

A homebrew 2 meter CW transmitter ought not be that hard to build if one is only trying to cover the satellite sub-band.

73 de WA1VHT
Scott

73's and good luck.

: Hello,

: I've got a few questions about satellites and launching them.

: * What is needed to launch a satellite ?

Damn big firework,
Money to build/buy space on one,
Permission to launch it.

: * Who can launch a satellite?
Anyone with the money.
: * How much does it cost to produce and launch a small satellite ?

Depends, it can be done mostly free, using donated labor, parts, ...
however, it's likely to be fairly costly.

: * Who controls the amount and which satellites that are launched into
: space ?

No-one. (well, goverments of the country you are in, or are a citezen of
may have a role.)

: * Are there any laws involving the use of the space for this purposes ?

What purposes?

: Thanks in advance,

: Lode Vermeiren

Alot of answers can be found at www.hcisat.com
The next generation satellite is going to use
an ion engine for stationkeeping. How about
that! :)

A launch vehicle, launch site, ground contol, insurance, and the
licensing/
permits.

> * Who can launch a satellite?

Any individual, company, or government with the licence/permits for both
the launch and payload.

> * How much does it cost to produce and launch a small satellite ?

Too many variables, low for goverment assisted educational programs
(MIR's
hand lob of a intenational student built satellite) to something in the
$20
million range (USD).

> * Who controls the amount and which satellites that are launched into

The UN with major influence by US, Russia, EC, NATO,...

> * Are there any laws involving the use of the space for this purposes ?

Many.

The UN has some under: International Agreements and Principles on Outer
Space
(sorry for not having the locations), The US lists quite a few on it's
federal
register, EC has laws along with each member nation, ... For books a
search at
Amazon books http://www.amazon.com using "Space Law" will turn up a good
list
(also the Library of Congress / US). Gather the ISBN numbers of interest
and
pay a visit to the library. It may take an inter-library loan or a visit
to a
college that teaches law to track down what you're looking for.

There are alot of laws there already with more being added. The Near
Earth
Asteroid Prospector (NEAP) a commercial exploration program and any
X-Prize
launches (non-government manned launch) are sure to cause many more.
